Always "seeking justice", I see...Now WHO is going to "seek
justice" for those of us who've had thier brains abused with that
horrific carp YOU call "English"...?!?!

> It never has a place in radio Newgroup

Oh? where's "radio newgroup"...?!?! Is that a .alt or rec.
group?

> you can indeed type what you want, I certainly can't legaly stop you

Was there a purpose to that waste of bandwidth there? All those
consonants and vowels gone to waste.

> I realy fail to understand why the bulk of posts even the bulk of posts
> not directed at me are about sex rather than a radio in radio NG's

I am sure you don't.

Stalking? Verifying someone's claims and statements hardly qualifies as stalking.

Try again, boy.

Currently in use here are a Drake R7, R8, R8A and R8B, 200' and 70' wires.

At the time of the above reception I was using the R8B and 200' W-E wire.

Does it play? Does it SOUND OK? If so, then it works great! Since you've stated that about half the stuff you buy has a notable problem one would think by now that you'd ask a helluva LOT of questions of the seller rather than simply accepting at face value the statements in the ad.

You seem to have a lot of issues with eBay. You're always whining about prices, shill bidders, etc., etc., etc.

And why, oh why is that Drake R7 still in your collection? You said you sold it, but there it is, still in your 'collection'. How many others are no longer there?

"As is..." automatically moves me to another seller.
"Worked"? past tense indicates no longer works great...
i.e. it worked great until I noticed the S-meter doesn't move.
If it said "works great" then he was hedging and implying it had sound through the speaker,
but not saying *everything* works great... again the "as is" should
have tipped you off.
His offensive, threatening reply is indicative of a con artist, liar, cheat, manipulator
who bullies people into leaving him alone. Report him.
Check feedback, ask tons of questions, skip the "as is" auctions.

You listed the bugs in a previous message, not me. Good grief don't
you read what you post? Plus, I spent enough time at the local SWL
store and talking with guys on CIS and the fidonet boards to realize
there were indeed quality problems with the radio.

The 70' (runs N-S) has been up since Oct-Nov of 2001 shortly after I bought this place. At the same time I installed a 100' wire running W-E which I extended to 200' the next year. Feedpoints are about 75' and 60' behind the house respectively. Both a coax fed using matching transformers with grounds at the feedpoint, then to the house into Stridsberg splitters.

1750. (AIR) Special broadcasts on 15 August 2006, India's Independence Day

Newsgroup: rec.radio.shortwave
Date: 2006-08-13 15:22:07 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <44DF439E.1410EBDC@milestones.com>
Source record: 87862

Dear Friends,

On the occasion of the 59th Independence Day celebrations of India, All India Radio will broadcast the running commentary of the flag hoisting ceremony at Red Fort, New Delhi on 15 August 2006 as follows at 0135-0240 UTC:

Hindi : 6030, 6155 & 15135 Kingsway, 9595 & 11620 Khampur.

English : 4860 & 11830 Kingsway, 9950 Aligarh, 13630 Bangalore, 15050 Khampur.

(Note: Kingsway 50 kW, & Khampur 250 kW are separate Transmitter locations in New Delhi. Aligarh is 250 kW and Bangalore 500 kW).

The Regional SW stations will change over to their day time frequencies about 1 hour earlier than usual as follows on that day providing interesting reception opportunities:

0130 UTC: 7115 Port Blair,7140 Chennai, 7150 Imphal, 7160 Chennai, 7180 Bhopal, 7210 Kolkata, 7290 Thiruvanathapuram.

0025-0400 UTC: 6020 Shimla

Reception Reports may be sent to AIR at:

http://www.allindiaradio.gov.in/recepfdk.html

or to

spectrum-manager@air.org.in

All India Radio would also relay President Dr.A.P.J. Abdul Kalamï¿½s Address to the Nation on the eve of Independence Day i.e. 14th August 2006 at 1400-1430 UTC which will be relayed by all stations of AIR.

so I said I enver said to secert woger it was said to Wismen himself
I never sad that secert woger I said it to the real one
get your facts straight

that said since the subject has come up you are both like cockraochs
and show up everywhere

and someday you will likely get squished

I can't make you do anything if If I could it would be to shut up

as to losing I keep asking the question what do you win?

I can post as much as I like that is a fact you and woger and Steve do
as well, nothing ilegal in that per se

Indeed this statement could be as effort at exthrotion by you, not that
their is any danger Law Enforcement will do aything about it, but you
and the est enage in a sysmatic effort to selicne your foes by means of
lies inuedo and outright fraud

but if I are going to play your games as a spelling and gramar NAZI
your stuff better be letter prefect or it blows up in your face so to
say

Ahhh - the windbag - you mean Kind Jewish Indian.

Yep, he can sure monopolize the frequency, can't he.

Between Kind Jewish Indian and Sir Sidney, they could shut The Great
Liberty Net down.

Wonder if Kevin will ever check in the GLN again. Or W9ART.

Tarzan Jammer and Doofus Jammer send their regards.

The fact of the matter, princess, is that I tend to be quite
conservative. That you chose to ignore that fact indicates that you
can't accept anything beyond your small, little world and that's a frame
of mind which seems to be endemic to Neocons.

Here's an exercise for you: refute intelligently that USA military
commanders are indicating that Iraq is in an effective civil war.

(Of course he didn't. It was his evil twin Skippy.)

WASHINGTON Aug 11, 2006 (AP)ï¿½ While the British terror suspects were
hatching their plot, the Bush administration was quietly seeking
permission to divert $6 million that was supposed to be spent this
year developing new homeland explosives detection technology.

Congressional leaders rejected the idea, the latest in a series of
steps by the Homeland Security Department that has left lawmakers and
some of the department's own experts questioning the commitment to
create better anti-terror technologies.

Perhaps that money was better spent elsewhere at the time.

As far as I know private industry was and is working up very viable anti-terror
technologies on their own, and after all, they'll wind up with the $6 million
and more.

+ when ya think about it, $6 million don't go very far these days.

From: danielle <null@null.com>
Message-ID: <ebo3kf$742$1@news04.infoave.net>
Source record: 87895

I have a Panasonic RF 2800 that I bought in 1978.
It has been in daily use in my kitchen for Many years.
Evidently lightning finally got it thru the AC mains.

I like the rather large for a portable <speaker> it tends to reproduce the bass components of the audio much better than other portables with smaller cases<

The radio will sit in my kitchen on top of the refrigerator most of the time, so size and portability are not major concerns.

Features that are important to me are:
Ease of use, e.g. good ergonomics
audio fidelity,
Digital readout on Shortwave,
internal power supply> AC mains and Batteries in case commercial power goes out<,
built in telescopic antenna,
and external antenna connectors.

I have looked at the S350 and the satelit 800. Does anybody out there have any other suggestions on a replacement?

Well it may be part of history but I was just wondering if it could be easily removed if someone wanted to return it to original condition without screwing up the face of the receiver.

Yes, looks like a good way to communicate some bad feedback. Thanks
for the head's up. I could have very likely tried to buy gear from
this scumbag. For expensive radios or heavy boatanchors I buy within
driving resistance. Branford is just over the Q bridge from New Haven,
CT. About 2 hours from my QTH. New Haven is ground zero for Appiza.
Best in the world. So If I have to drive to Branford to pick up a radio
I know there will be some good Ahbeetz too. Not exactly sure what he
was selling so I only bid $186,741.23

Ask Dr.Who? In my opinion,General Motors Corporation messed up when they stopped building Oldsmobile cars. www.devilfinder.com History of Oldsmobile.
Perhaps sales were falling off,but GMC could have came out with some new models and kept them going.Oldsmobile cars were some of the nicest cars that GMC ever made.If GMC goes belly up,I am going to blame it on GMC.

They were 6 mos ago. I sent R8B there for a tune-up. Didn't they have their hands into the new Eton radio design - I think it was the E1, the one Brian bought??? I heard that sync actually worked in the Eton design so I figured Drake must have had something to do with it.

Any of the Panasonic radios in that series would be a good
replacement...2600, 2800 and 2900. I believe the 2600 is a later model
and is usually priced reasonably on Ebay.

Ebay doesn't care. I had a problem with this jerk
Lawrence K. Cozzi
using email address
nu2u@centurytel.net

I put an URL in my feedback to further explain the problem. He
complained to ebay and got the negative feedback dropped. I complained
to ebay that I should get a chance to leave the negative feedback
without the URL, but they said their system can't handle that. Obvious
bullshit on their part.

Cozzi indicated the item worked fine, but when I got it, there were
obvious problems. So the story goes, he was selling it for a friend,
who said it was working fine. Now this part I believe since if you look
at his posts, they are all related to big block Fords. THat is, he is
clueless regarding radio. His friend provided the address for the part
I needed to fix the device, which is pretty interesting considering it
was supposed to be working fine.

I'm not surprised, for that price. What you are experiencing DXers might call overload or spurious signals. Selectivity refers to the ability of am FM radio to separate stations only +or- 200 kHz from each other (adjacent channel) or separating stations +or- 400 kHz is called alternate channel selectivity or rejection. Most FM radios have poor adjacent channel selectivity.

For your situation you might try pushing the antenna down partway & see if that clears things up. Also, rotate antenna & see if one direction takes out some of the overload. Otherwise for better FM reception you may need a better radio. I don't know how close you are to your local FM stations towers. If you're really close, almost every radio may have problems. You might want to try the Eton E100 pocket radio, someone said it could get distant FM near strong locals & they sometimes sell on eBay for only $20-30. George (MN)

HISTORY TEST

Please pause a moment, reflect back, and take the following multiple choice test The events are actual cuts from past history. They actually happened!!!

Do you remember?

-1968 Bobby Kennedy was shot and killed by
a. Superman
b. Jay Lenno
c. Harry Potter
d. Muslim male extremist between the ages of 17 and 40

1. In 1972 at the Munich Olympics, athletes were kidnapped and massacred by
a. Olga Corbett
b Sitting Bull
c. Arnold Schwarzenegger
d. Muslim male extremists mostly between the ages of 17 and 40

2. In 1979, the US embassy in Iran was taken over by:
a. Lost Norwegians
b. Elvis
c. A tour bus full of 80-year-old women
d. Muslim male extremists mostly between the ages of 17 and 40

3.During the 1980's a number of Americans were kidnapped in Lebanon by:
a. John Dillinger
b. The King of Sweden
c. The Boy Scouts
d. Muslim male extremists mostly between the ages of 17 and 40

4. In 1983, the US Marine barracks in Beirut was blown up by:
a. A pizza delivery boy
b. Pee Wee Herman
c. Geraldo Rivera
d. Muslim male extremists mostly between the ages of 17 and 40

5. In 1985 the cruise ship Achille Lauro was hijacked and a 70 year old American passenger was murdered and thrown overboard in his wheelchair by:
a. The Smurfs
b. Davy Jones
c. The Little Mermaid
d. Muslim male extremists mostly between the ages of 17 and 40

6.In 1985 TWA flight 847 was hijacked at Athens, and a US Navy diver trying to rescue passengers was murdered by:
a. Captain Kidd

b. Charles Lindberg
c. Mother Teresa
d. Muslim male extremists mostly between the ages of 17 and 40

7.In 1988, Pan Am Flight 103 was bombed by:
a. Scooby Doo
b. The Tooth Fairy
c. Butch Cassidy and The Sundance Kid
d. Muslim male extremists mostly between the ages of 17 and 40

8. In 1993 the World Trade Center was bombed the first time by:
a. Richard Simmons
b. Grandma Moses
c. Michael Jordan
d. Muslim male extremists mostly between the ages of 17 and 40

9.In 1998, the US embassies in Kenya and Tanzania were bombed by:
a. Mr. Rogers
b. Hillary Clinton, to distract attention from Wild Bill' s women problems
c. The World Wrestling Federation
d. Muslim male extremists mostly between the ages of 17 and 40

10.On 9/11/01, four airliners were hijacked; two were used as missiles to take out the World Trade Centers and of the remaining two, one crashed into the US Pentagon and the other was diverted and crashed by the passengers.Thousands of people were killed by:
a. Bugs Bunny, Wiley E. Coyote, Daffy Duck and Elmer Fudd
b. The Supreme Court of Florida
c. Mr. Bean
d. Muslim male extremists mostly between the ages of 17 and 40

11In 2002 the United States fought a war in Afghanistan against:
a. Enron
b. The Lutheran Church
c. The NFL
d. Muslim male extremists mostly between the ages of 17 and 40

12. In 2002 reporter Daniel Pearl was kidnapped and murdered by:
a. Bonnie and Clyde
b. Captain Kangaroo
c. Billy Graham
d. Muslim male extremist s mostly between the ages of 17 and 40

13. 2004 - Spain Railwayy bombings.
Muslim male extremists mostly between the ages of 17 and 40

AND NOW !

14. 2005 London Railway bombings
Muslim male extremists mostly between the ages of 17 and 40

Nope, I really don't see a pattern here to justify profiling, do you?

So, to ensure we Americans never offend anyone, particularly fanatics intent on killing us, airport security screeners will no longer be allowed to profile
certain people. They must conduct random searches of 80-year-old women, little kids, airline pilots with proper identification, secret agents of the President's
security detail, 85-year old Congressmen with metal hips, and Medal of Honor winning and former Governor Joe Foss, but leave
Muslim Males between the ages 17 and 40 alone because of profiling.

Let's send this to as many people as we can so that the Gloria Aldreds and other dunder-headed attorneys along with Federal Justices that want to thwart
common sense, feel doubly ashamed of themselves - if they have any such sense.

As the writer of the award winning story "Forrest Gump" so aptly put it, "Stupid is as stupid does."

Come on people wake up!!!
Keep this going. Pass it on to everyone in your address book.
Our Country and our troops need our support and prayers....

When did Kenwood stop making their shortwave receiver? I had two portables during the 1990's - Grundig YB 400 and a Sony 2010. I always wanted to get a table top receiver but never did. The table top that looked the best was Kenwood.

Then why didn't you specify that in the first place? And why didn't you ask in one of the many rec.radio.amateur.* newsgroups?

There is absolutely no context for us to know what you were talking about, after all this is not a newsgroup for amateur radio, despite all the junk postings that are overflowing from there into this newsgroup.

Mike,

The seller stated "EVERYTHING WORKS GREAT" in the listing. That's pretty clear. If ANYTHING doesn't work, then the item was misrepresented and you can file a dispute to get your money back. This is one of the reasons I usually only use Paypal, but eBay's own buyer protection should help.

The thrust of the original post was that bush's rating went up because
he was supposedly such a big hero in this latest bomb threat episode
(even though it was Brit, not American police and Paki, not Iraqi perps).

The point was that if he is such a "big hero", why was he trying to
divert money -away- from bomb detection technology? (no matter how much
or little the dollar amount was).

2 - The Grundig {Eton} S350 or S350DL Radios
-or- the newer Redsun RP2100 may fill your needs
for a reliable Kitchen Radion Radio with that "Big
Speaker" Sound .
eBAY REDSUN => http://tinyurl.com/jdzd4
http://search-desc.ebay.com/search/search.dll?sofocus=bs&sbrftog=1&fstype=1&from=R10&catref=C6&satitle=redsun&sacat=1500%26catref%3DC6&fts=2&sargn=-1%26saslc%3D2&sadis=200&fpos=95383&ftrt=1&ftrv=1&saprclo=&saprchi=&fsop=1%26fsoo%3D1&coaction=compare&copagenum=1&coentrypage=search

3 - Another opinion is to use a Pair of Self-Powered
Computer {Stereo} Speakers connected to any
'portable' AM/FM Shortwave Radio to " F I L L "
the room with Wonderful Sound.

OBTW - Down in Oakland,CA my Kitchen Radio
is a Grundig Satellit 800 Millennium Radio and the
4" Speaker sounds great by itself for AM Radio
Listening. Plus I use a Pair of Self-Powered
Computer {Stereo} Speakers connected to the
Line-Outs and they give me Left-and-Right Stereo
with the Radio's Speaker as the Center-Sub-Woofer
for exceptional FM Stereo Radio Listening.
SELF-POWERED STEREO SPEAKERS => http://tinyurl.com/zhkyb
http://electronics.search-desc.ebay.com/powered-computer-speaker-system_Speakers-Subwoofers_W0QQcatrefZC12QQcoactionZcompareQQcoentrypageZsearchQQcopagenumZ1QQfromZR10QQfsooZ1QQfsopZ1QQfstypeZ1QQftrtZ1QQftrvZ1QQftsZ2QQsacatZ14990

4 - Here is another Shortwave Radio Speaker
alternative to consider is Big Sound is your thing.
http://cgi.ebay.com/SOUND-STUDIO-STEREO-SPEAKER-for-SHORT-WAVE-RECEIVERS_W0QQitemZ270016615456QQihZ017QQcategoryZ15051QQssPageNameZWDVWQQrdZ1QQcmdZViewItem

www.devilfinder.com History of General Motors Corporation

1897,Oldsmobile.GMC got rid of their historical namesake cars,Oldsmobile.(Oldsmobile used to make a line of pickup trucks too.I used to see a 1928 (I think it was 1928) Oldsmobile pickup truck running around Jackson back in the 1950's and 1960's.Nowdays,GMC is talking about merging with Renault and or two other foreign car outfits,sort of like Chrysler merged with Daimler and became Daimler/Chrysler.
What would happen if Ford Motor Company got rid of their Ford line of cars and trucks?

There isn't much left after the filtering. Take a look at the
Google-Groups archives for this group from the past decade (1990's) when
the on-topic posts greatly outnumbered the OT's. Those were the good old
days compared to now.

He's not a lew? Is that anything like a len? Because considering
the type of character the one prolific spammer named len that we have
here, I wouldn't want to be a len either.

You beat me to it. I was going to say the same thing.

Here is an example of cuhulin (pot) calling the kettle black. He is the
master of 'short' links (here's the website, now you find the article).

Are you talking about This ??

http://tinyurl.com/zwqnx

- Not really much of a radio; probably slightly better than the Bell &
Howell 9-band

STILL, you could hook it up to an aplified antenna and pick up..

virtuallly everything !

Never have to move the dial ever again . . .

Thanks for the reply. I wasn't sure if selectivity was really the
issue. That's a good tip about lowering or rotating the antenna, and I
will try that.

I have better radios in my collection, so I'm not too concerned. The
small frequency range of the speaker on this unit is not ideal for the
typical music broadcast on FM. I can continue using this radio for MW
and SW, where images are not as problematic.

I had A dream I was up at the pearly gates and saint Pete told me I could only bring one of any of the dogs I've ever had with me. I took Whitley. He's a 7yo golden Lab and the best dog I ever had. He had my Phillipino friend Felix pinned up against the door leading out to the garage one morning when he walked in to the house. Felix couldn't walk into or get back outside until I came down from my bedroom. People think Labs are so friendly you can just walk into the house. Heheh.

> 2.5 million manufacturing jobs gone, IT jobs outsourced, economy in shambles.

Can you say Liberal-Communist propaganda?

Economy in shambles? Are you taking drugs? Do you live in Habbana?

The Economy is rip roaring along which is why the interest rate has been raised 17 consecutive times. The unemplyment rate is far below historical norms.

I suggest you don't send your children to public elementary and high schools and be sure they shoot for a Master's or Ph.D. in a respected field of study. Because THAT is what your foreign competition is aiming for and what they indeed are obtaining.

A high school education simply doesn't cut it any longer and is detrimental to your sons' survival. This is brought out in factual data where America males with only a high school diploma can not find a spouse. Why? American females are graduating from college at a higher rate than their male counterparts. This means that American females with a college degree are increasingly likely to marry a foreigner with a higher education than hers and her American male counterpart. With the advent of the internet the search for a spouse can and will be done GLOBALLY. Especially when the crises age of a single American female approaches 30. And your grand children are now more likely to be of mixed race and/or culture. Meanwhile, single, unemployed and disgruntled American males OF ALL RACES will increasingly become ripe candidates for Islam-0-facism.

GM's as well as Ford's upper management are positioning their companies so that they have a plausible reason become bankrupt. This is so they can forsake their massive pension obligations to their retired workforce. The pensions which their Unions so rightly faught for over many years.

Forget about quality and an imaginative designs. They have purposely gutted their engineering teams of any quality talent.

One I use is the AM Log Book. It lists by Freq, Call, State, City, depending on which you go to. Lists both U.S. & Canada. If you go to the frequency section, it also gives latitude and longitude. He has frequent updates (in the update section), and under the frequency section (maybe the others), he also lists the current format. Hope this helps. I don't have the web addie off hand, but could dig it up if you can't Google it. Can't remember if Log Book is one word or two. Eric

Are there ANY portable radios currently being made in Japan?
I thought that the only SW radios still actually made there are the
JRC models at many kilodollars each, and perhaps the actual
manufacturing of those has been shifted offshore, too.

Re a coming Chinese-made radio: Could this have been the
Degen 1106, the design of which actually was sold and eventually
came on the market as the Eton E5?

Or are we talking about a tabletop set equivalent to a Watkins-Johnson
or high-end JRC or the big Ten-Tec?

Actually, I would think that the Chinese military might have a local
contractor making something like that for them, and there isn't any
real reason that such a radio couldn't be offered on the world market.
Any Chinese company certainly now has the incentive to try to expand
their market for any product that's not classified. I wonder if
anything
like that shows up at the Asian trade fairs for military goods,
aircraft,
etc.?

For its normal use it's a piece of test equipment. But for the intended experiment, it is the primary (and cheapest) way to send tones onto a particular frequency to be recorded.

What happens when tones are sent to the frequency? Nothing. But in the Mark IV experiments, they were a conduit for voices (allegedly paranormal in nature) to materialize and a 2-way communication to take place (versus the recording of white noise with a tape recorder, asking questions, and having to stop the tape, play it back, and analyze it with software, which most paranormal investigators realize is too tedious and time-consuming and one-way in nature - more like email vs. instant-messaging for paranormal communication).

grav

1885. Recording the back of my scanner ... weird voices

Newsgroup: rec.radio.shortwave
Date: 2006-08-14 19:55:45 UTC
From: FLjeffbeach@bellsouth.net
Message-ID: <1155585345.391765.92750@b28g2000cwb.googlegroups.com>
Source record: 87995
Cross-posted to: rec.radio.shortwave,alt.radio.pirate,alt.paranormal,alt.folklore.ghost-stories

I turned my scanner onto a particular "dead" frequency (actually, it doesn't matter which frequency - every one I tried produced the same results) and of course heard nothing but static (and of course the squelch was 1 or 2 because anything higher would mute out the sound).

I then plugged my IC recorder (digital voice recorder) into the back of the scanner and pressed record. I uploaded the recording to my computer with Adobe Audition and amplified the sound, and could hear human voices (this was confirmed by various witnesses) saying things that would have me in doubt that I was picking up a stray broadcast. Words were used like "ghosts", "spirit", the "n" word, along with meaningless dribble and weird animal sounds. This was in the same back bedroom where I set up my RF signal generator, scanner, and other recording equipment to mimic the 70s Spiricom "Mark IV" experiment.

My question is this: can a digital recorder pick up voices through a frequency if plugged into the back of the scanner (of human origin) that cannot be heard through the scanner's speaker? The same recording was done of the room with the white noise of the dead frequency in the background and entirely different results were produced, with the voices sounding less monotone and more like others were in the room talking.

Of course, it doesn't help that I was doing paranormal research using the digital recorder at a desolated black cemetery in town here and abruptly stopped to focus on 2-way communication as opposed to EVPs.

Any way to easily explain away the voices that show up on the recording of the static/frequency but not the static/frequency itself when listened to in real-time?

Because the original poster said something about a previous post here asking about what features were desired, I'm thinking he just garbled it.

At one point, Pete, KE9OA, did ask about features for a radio here, but it was for an AM broadcast band receiver only. That was back in the fall of 2003. The design did come about, but I can't recall the end point. Obviously, it has been a while since that happened, and I don't recall anything about it actually going into production. The company was not one we'd know for shortwave receivers, may not have even been one most would recognize.

That's the only time I can remember anyone asking here about features to put in a radio. Well, it's come up plenty of times as a fantasy game, but I don't anyone else asking in anticipation of designing a commercial piece of equipment.

1894. The Media's "Socialist" Conditioning of the West

Newsgroup: rec.radio.shortwave
Date: 2006-08-14 20:38:48 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12e1nqqfhopride@corp.supernews.com>
Source record: 88004

Both the League of Nations' 1922 Palestine Mandate and the 1947 UN Partition Plan endorsed the aim of Zionism. The latter was a rare instance of concurrence between the United States and the Soviet Union during the Cold War.

From 1951 the Jordanian Communist Party organized Palestinians in the West Bank while a new Palestinian Communist Organization mobilized members in Gaza. In 1975 a Palestinian Communist Organization was also formed in the West Bank as a branch of the Jordanian party and in 1982 this severed ties with Jordan and merged with the organization in Gaza to become the new Palestine Communist Party (Connell, 2001, p. 61). This Party later became the Palestinian People's Party and joined the Palestine Liberation Organization in 1987 (Kawar, 1996, p. xii).

The 1968 PLO Charter endorses the use of violence, specifically "armed struggle" against what they call "Zionist imperialism."

Article 22: Zionism is a political movement organically associated with international imperialism and antagonistic to all action for liberation and to "PROGRESSIVE" movements in the world.

Palestinian people look for the support of all the "PROGRESSIVE" and peaceful forces and urge them all, irrespective of their affiliations and beliefs, to offer the Palestinian people all aid and support in their just struggle for the liberation of their homeland.

Zionism was supported by the political left at various times both before and after Israel's formation, in part due to sympathy for the Jews as an oppressed people and in part due to the strong socialist roots of Labor Zionism. Since the Six-Day War of 1967, however, the Palestinians have been gathering more sympathy as a dispersed and stateless people, and Israel has been moving away from the limited socialist policies it had originally adopted. This has led to a loss of support for Zionism among the political left, especially in Europe.

http://en.wikipedia.org/wiki/Zionism

Steve Plaut (Peace de Resistence 3/13/03)

One of the clearest signs of the growing nazification of so much of the world's media is the increasing trend to label Palestinians atrocities, such as the exploding of the bus full of children in Haifa this week, as "Palestinian resistance". The PLO and its amen choruses routinely explain away such mass murders of Jewish children and other civilians as "Palestinian resistance", but so do the BBC and many other establishment media outfits.

Of course describing Palestinian behavior as "resistance" makes precisely as much sense as describing as "resistance" the campaign of the Wehrmacht and Gestapo in the 1940s against the various anti-German partisan forces. In other words, it is yet another Orwellian inversion. The Palestinians are not the forces that resist evil, but rather they are the savages. The Jews are those who are resisting savagery. Resistance against fascism and barbarism is what Israel does when it assassinates terrorists and blows up their homes.

The trendy use of the term "resistance" for Palestinian violence is a rather naked attempt by anti-Semites to justify those atrocities, exactly as would be an attempt to label 1944 German anti-partisan activity as "resistance". It is really entirely consistent with the long insistence by the press on referring to Palestinian mass murderers as "activists" and "militants", as if they are marchers in a gay pride parade or Save-the-Whales march, rather than terrorists and Nazis.

If this is not an attempt at trolling.........

All that's happening is a simple case of "Rectification". You are hearing
one or more AM broadcast stations. This is nothing new.
Unless of course you really WANT to believe this is something it's not.....

Har-dee-har-har-har...that's a good one, Doggie!

You just admitted that bush is a sock puppet.

He is supposedly the boss and the buck supposedly stops with him.

Either he -is- a big hero, stands up to his "administration", says we
are NOT going to divert bomb detection money -OR- he is a sock puppet
stooge.

You can't have it both ways.

Hello... I'm 100 % sure there was a thread here about a "wish list" for a new Chinese sw receiver that was in the works. The thread was started by a person that was involved in the design/production of the radio. From what I recall, the radio was going to be along the lines of a Sat-800 as far as performance goes. I still cant remember if it was a portable or a table top. I also remember that the thread deteriorated into all sorts of xenophobic commentary. No one remembers that ??? There were dozens of posts to that thread.

Michael

> Unless of course you really WANT to believe this is something it's not.....

If this was rectification of AM stations, then why:

- No music, advertising, or anything else shows up, but yet
- Sometimes clear voices are heard saying vulgar words which would never be allowed on any AM station, and
- Sometimes prophetic statements are made using my own name and the name of other witnesses present or deeply involved in the experiments, and
- In one instance I heard what sounded like several loud chickens bocking at such a large volume it would've surely been heard at room volume (incidently, these loud "animal-like" sounds always appear toward the end of the recording, shortly before I hit "stop" - but yet there is no interference with the audio plug or movement by myself before stopping the recording, yet they are often a hallmark of the brief mostly 30-second recordings I do)?

To one extreme I heard a death threat used against one of my co-workers. To the other I heard statements like "you did not work today" (which I hadn't) and "no mouse pad" (which I use none).

Overall, if you count the digital recordings from the cemetery (where no white noise was present except for the internal components of the rather silent recorder), the house, and plugged directly into the back of the scanner, I've stored thousands of unexplained voices - and it would've been impossible for the scanner to pick up AM stations in the cemetery (and along with the fact that most all the voices sounded had thick country accents and sounded African-American in nature with poor grammar, I find the odds of this being rectification far-fetched).

A group of friends and I were so intrigued with some of the voices from the cemetery, we made a CD which had some of our best recordings and submitted it at work and to other people with a brief survey for the listener to circle either AGREE, DISAGREE, or UNDECIDED as to whether they heard the same voice and believed it was saying the same thing as we did. And of course, several EVPs (electronic voice phenomenon) had an agreement rate of over 95% of nearly 30 people.

I am not debating the existence of EVPs using a recorder and a source of white noise, TV static, etc., for the conduit. I am asking you for a

plausible explanation that would explain voices saying your name, sometimes vulgar words, etc., with such clarity that witnesses all agree on what is being said but have no explanation as to how or why they are showing up on a recording of of a frequency with nothing audible on it when not recording.

And one last thought... how could such clear voices and sounds (sometimes very loud in nature but yet inaudible while not being recorded) be showing up on *any* frequency with a squelch level of only 1 or 2? I thought perhaps the audio cable to the recorder acted like some sort of antenna but in reality it's not even hooked into the external antenna jack.

Anyway, I'd rather at times believe there *are no* spirits that followed me back, which is why I'm trying one last time to come to a plausible conclusion which would explain away the voices which have been picked up on tape, recorded, and catalogued for the record.

Thank you for helping to solve this mystery...

Jeff

> cuhulin

EVP experiments have been quite substantiated in laboratory settings. Before dismissing something as "hogwash" why don't you try for yourself? Simply make a 30-second recording with preferably a digital recorder (that way you don't try to explain away the voices by thinking the cassette tape was previously recorded on or the magnetic silica that make up the tape are somehow picking up stray radio broadcasts) and ask some simple questions.

It's best to do it with a small bit of white noise in the background - if you're worried about rectification from your scanner or radio, try a TV station full of static with the antenna unplugged, or a ceiling fan, etc. Then upload the recording and amplify the sound a little (amplification in no way alters the recording, only makes the voices easier to decipher).

We've picked up so many EVPs that EVP itself is now boring and a dead-end of sorts. Hence the need to set up apparatus for 2-way radio communication using tones being sent to various frequencies (the original Spiricom experment used 29.570 MHz), then waiting for days, months, or even years until you get that first contact. It's more about patience than believing, because once you do pick up the voices, you will certainly question the reality you live in.

Jeff

PS The Panasonic RR-DR60 recorder was yanked from the market because of consumer complaints about unexplained voices showing up during business meetings, etc. It became the Holy Grail of EVP recorders, and recently had a bid of $1100 for a used recorder on eBay.

It retailed for $40.

Some have said it's Rectification, but what I think you are really
experiencing is something known as Rectum-ification.

Rectumification is thinking you can hear something when you have your head
up your ass.

Now, go tell your friends at alt.fan.art.bell the good news.

Happy to Help.

this is known as E.V.P. or electronic voice phenomena. it is reputed to be the voices of dead people, or spirits, or devils, depending on who tells the story. personally i believe that it is a combination of imagination and the millions of spoken words hanging in the air on radio at any given moment. there is a variation if you want to get really freaked out, set a tv on a blank station with no signal. listen to the hiss and you will hear the same kind of words and bits.....but sit close and watch the sparkles on the screen and you will see faces and images zoom out of the static! its quite disturbing! i think that the explanation is this, your brain is constantly comparing every visual stimuli with its gallery of known objects. this is how you recognise peoples faces or different objects. the sparkles on the screen have every pixel flashing and your brain is trying to make recognizable patterns. when a pattern is detected the memory of the object rises up to be considered. by this time the random sparkles have changed, thus the object or face rises to your mind then evaporates as another pattern is struggling to be resolved. in your minds eye the face has zoomed up out of the static and then zoomed away. the audio seems to be the same thing, words resolve out of the hiss and then are lost forever. the best part is psychological, you seem to recognise the word or picture but since it has gone away now you cant prove that it was never there to begin with! soon you are on the art bell show with a great story that you really do believe and nobody can disprove! great fun!

First, I believe you mean the magnetic iron oxide, not silica, which is sand. You would have to have a STRONG modulated -magnetic- field to inadvertently pick up "mysterious" voices.

Finally, what makes you think a digital recorder is immune to rectification? -EACH- IC (Integrated Circuit chip) in the digital recorder contains hundreds of P-N junctions which ARE rectifiers and thus susceptible to unwanted rectification of RF fields.

Bottom line: a digital recorder is equally or -more- likely to pick up a stray RF field than a analog tape recorder.

Which proves nothing except that

a) the Panasonic design weenie was not cognizant of standard RFI mitigation techniques.

b) P.T. Barnum was right! There is indeed a sucker born every minute.

As a seller, ya gotta love eBay!

I agree fully with what you are saying. It's the same way people claim to see faces in smoke, clouds, etc. However, the way ITC (instrumental transcommunication, in which EVP is only one subcategory of) works is not trying to make patterns out of TV snow or even recording the static with a VCR, but:

- Putting the TV on the Auxilliary channel so the channel is blank on most TV sets,
- Hooking the RCA plugs of a video camera up to the TV, and
- Pointing the camera at the screen (so you're essentially recording into infinity - the camera is hooked up to the TV but yet is recording a picture into a picture into a picture)
- Recording what is picked up and playing it back, then freezing it *frame-by-frame*

If this is done with patience and the right equipment, rather defined human faces will show up for many people. Take a look at a few here:

http://inicia.es/de/luisfountain/itc_1.htm

As you can see, it's not the same as simply recording TV static and playing it back - sure, you'll see patterns and probably faces, but it'll not be exactly the same concept of video ITC.

when a pattern is detected the memory of the object rises up
> to be considered. by this time the random sparkles have changed, thus
> the object or face rises to your mind then evaporates as another pattern
> is struggling to be resolved. in your minds eye the face has zoomed up
> out of the static and then zoomed away. the audio seems to be the same
> thing, words resolve out of the hiss and then are lost forever.

As far as words being taken out of TV static or other white noise, I fully understand where you are coming from. That's why it's best to use a recorder and have witnesses listen to the tape at the same time as you. Often times a voice will be so clear, far above the sound level and static of the white noise, that everyone will hear it and instantly agree on what it is saying. If you visit the cemetery often enough trying to communicate with spirits, you're going to get some that

follow you home.

Initially (before doing research at the cemetery, which was dilapidated and many graves had no marker, only a mound of dirt, and had been vandalized several times in the past with crypts being broken into, and so on) I could get no voices on my recordings that I did in my own house - and I even used white noise for the background. Now I can pick up loud voices with NO white noise in the background. On a few disturbing occassions, the recorder itself seemed to be temporarily altered and the voices were yelling in threatening tones.

What makes me almost certain this is not hearing imaginary voices in static is that the voices are sometimes 5x the volume level of the white noise, and when they show up on the recording so you can play back, get other peoples' intentions, and save on the computer, then the brain-pattern-imagery theory falls apart. The only other *logical* explanation is a stray signal (remember, no antenna is used and you can even use a ceiling fan) or someone in the room talking (which you'd surely notice while doing the recording).

Next time you're lying in bed trying to sleep and you have the air conditioning on or the ceiling fan on and think you hear something being said, it is not necessarily your imagination. An easy way to confirm whether there truly was a voice is to make a recording. If your house is old you may be picking up EVPs (or video ITC if you try it) in no time. If your house is relatively new, you probably won't hear much unless you really put time and dedication into receiving results, or start going to disturbed cemeteries and basically invite spirits (and most likely trouble) back into your home by simply doing EVP recordings at the cemetery.

This I don't recommend unless you are ready to be scared out of your mind. And once that happens, it won't be nearly as easy explaining things away by brain/pattern theories and AM rectification as it is now, considering most of you have no experience with the process of ITC/EVP.

the best
> part is psychological, you seem to recognise the word or picture but
> since it has gone away now you cant prove that it was never there to
> begin with! soon you are on the art bell show with a great story that
> you really do believe and nobody can disprove! great fun!

Explaining something away by logic to the satisfaction of those who have no experience with the phenomenon is an easy way for people to dismiss this research. That is why I give an open invitation for anyone with a little time and the access to a digital recorder and computer with shareware sound software to go ahead and try it.

Jeff

Side note: Since we constructed the machine in my back bedroom, I have recently put up a surveillance camera with its own microphone and fed

the cable to the TV in the living room, so I can see what happens in the room while nobody is in there. Orbs, or bright white spheres have been witnessed and many times zoom up in the air in a curving motion, opposite the way dust might settle (no a/c was on and no insects were in the room after inspection). I recently bought a VCR to record myself tinkering with the device and for the first time on the tape heard my name "Jefffrey" being spoken through the microphone and onto the TV's sound. This was the only voice uncovered before I became filled with fear and turned off the recording, but the voice was far above the room's background sound level. This never occurred before by just listening to the audio with others. It only occurred after the sound was recorded, so now it appears that almost any microphone will pick up EVPs from that room.

1927. Re: Loop Antennas / minijack works-clips don't / impedence??

Source record: 88038

Is the SW100 antenna jack safe to use with the DE-31 (KA-31) ? The
SW100 powers the antenna which comes with it -- so it outputs voltage
on the antenna jack... When I bought a Torus Tuner (Edek) loop, Ed
especially modified it (and future units) to work with the SW100, after
I requested it.

I actually tried it with the SW100 antenna jack and then reminded
myself that I probably shouldn't. I'm now testing it on the SW100 rod
antenna and the DE1105 rod antenna.
The DE1105 does have an S meter (I don't know what units they use).

My goal is to get the DE1105 with DE-31 to work and then sell my SW100
and Torus Tuner loop. The SW100 and Torus Tuner are both great... but
nowadays, I use shortwave mostly for travel and the SW100 is too
precious and the Torus Tuner is too big to bring along.

1928. US Scheme Could Affect Global Communications

Newsgroup: rec.radio.shortwave
Date: 2006-08-15 01:06:45 UTC

US satellite protection scheme could affect global communications
http://www.physorg.com/news74778465.html

A proposed US system to protect satellites from solar storms
or high-altitude nuclear detonations could cause side-effects
that lead to radio communication blackouts, according to new research.

If activated, the "radiation belt remediation" (RBR) system
could significantly alter the upper atmosphere, seriously
disrupting high frequency (HF) radio wave transmissions and
GPS navigation around the world.

The remediation system aims to protect hundreds of low
earth-orbiting satellites from having their onboard electronics
ruined by charged particles in unusually intense Van Allen
radiation belts "pumped up" by high-altitude nuclear explosions
or powerful solar storms.

The approach, which is being pursued by the US Air Force
and the US Defense Advanced Research Projects Agency,
involves the generation of very low frequency radio waves
to flush particles from the radiation belts and dump them
into the upper atmosphere over one or several days.

The scientific team from New Zealand, UK and Finland
calculate that Earth's upper atmosphere could be dramatically
affected by such a system, causing unusually intense HF blackouts
around most of the world.

The disruptions result from a deluge of dumped charged particles
temporarily changing the ionosphere from a "mirror" that bounces high
frequency radio waves around the planet to a "sponge " that soaks them up.

The research is published in the August edition of the
international journal Annales Geophysicae. The researchers
suggest that policymakers need to carefully consider the
implications of remediation.

If the intense radiation belts resulted from a rogue state
detonating a nuclear-tipped missile in the upper atmosphere,
using such remediation technology would probably be acceptable
to the international community, regardless of any side effects.

However, using the system to mitigate the lesser risk to
satellites from charged particles injected by naturally
occurring solar storms should be considered more closely.

The impact of the disruption to global communications needs to be weighed carefully against the potential gains.

Then I have one question and one assumption: Is there a way of making a recording of the environment without the possibility of rectification? And... a leading theory in EVP is: "EVP is considered to be radio frequency signals that inadvertently find their way into your recordings by way of cross-modulation, atmospheric refraction or indirect rectification. Many paranormal investigators feel that these voices or signals are somehow connected to ghosts."

Let's say for the sake of debate that some voices using the EVP process are genuinely otherworldly or from another dimension. They have to show up on our recording apparatus somehow, and I guess the leading theory is that this is through RF signals. The question of "how" is beyond my league. I simply deal with results, and the results

- Contain language, complete first-and-last names of myself and others who are involved in this research, prophetic messages, etc., that would never be broadcast on any AM or other radio station.
- The phrases are often times speeded up during certain words, as if the message is trying to be purposely fit into a short time. Some EVPs are so fast that you have to slow down the speech to understand it.
- I can pick up louder and more clear words (actually sounding like they're coming from vocal chords) without *any* background sound or white noise, as opposed to the relatively weaker and more monotone voices picked up from the scanner, using the *same* recorder in the same setting during the same atmospheric events (weather, solar flares)
- Some voices are so loud and clear that it would be highly improbable for someone doing a simple recording to explain away by a stray radio signal, unless it's coming from another dimension.

If you would try EVP for yourself and judge the voices you capture on an objective, one-by-one basis, instead of dismissing every voice

anyone has ever picked up as having no chance of being paranormal in nature, you might question more the world around you. It just so happens that EVP is the best way to get evidence of that world.

> >

> mitigation techniques.

If that is why the recorder was so good for EVP, then someone could easily alter another recorder or build their own and sell it as an EVP recorder and make a considerable amount of money, considering the public's interest has skyrocketed.

> b) P.T. Barnum was right! There is indeed a sucker born every minute.
>
> As a seller, ya gotta love eBay!

I have another explanation: People in today's society are lazy and want to take the easiest route to accomplish something - if there was a "holy grail" of EVP recorders, people would buy it instead of spending time working from the ground up with a standard recorder. Sure, my recorder didn't even pick up voices at first. Then gradually some voices were picked up. Now I can't do a 30-second session without sometimes dozens of voices showing up, speaking over top each other, without any white noise. And that seems to correlate with my own travels to cemeteries and the building of a machine to communicate with other dimensions.

If you were a spirit and had a message to convey, you'd probably gravitate toward someone who was spending time trying to open up the door to communication.

EVP research (it's research because it can't easily be explained away by those who were skeptical at first but did their own investigation of the phenomenon) takes patience, an open mind, and no particular belief system starting out. But it's not recommended for everybody. In fact, I took the easy way out by trying to visit places in hopes something would follow me back. Now it has, and I can pick it up anytime I want to.

Jeff

Jim is exactly correct. I see absolutley nothing in those pictures at
the link you posted. You are seeing your minds attempt to make sense
out of nonsense. You clearly very much WANT to believe. But if one has
to WANT to believe then it is not true.

On the bright side, I'm sure that others WANT to believe too and if you can
find enough of them you could start a new lucrative religion.

Kevin

As soon as I found out that 'wimmins' in Mississippi talk means a small,
mute, nocturnal mammal with a rather overproportioned rear end, I KNEW
he was real thing. Raping Vietnamese women just isn't enough for some
people.

Not really. If they vote improperly, he fills the bowl with TWO beers.
The deviant has often fantasized here about cross species sex.

Ask him about his female underwear wardrobe.

Well, I just have two comments.

1) If the nukes start flying, I think that whether the GPS or the F Layer
still work will be the least of our worries..

2) It would certainly solve the problem of nighttime IBOC interference..
```

it could have been NUKES this time everyone pretty well know that
Isreal has them

indeed I dod suport the ceasefire the timing of this war served Iran
not isreal or even Hezzbolah but the matter isn't settled and likely
will not be till till arabs start loving their people and tesp their
children

as long as they see their kids as humna cruise missles the war will go
on

Hopefully the US can use this time to deal with Iran which may remove
hezzbolah as a force

1981. Tips and Tricks for Eavesdropping Detection

Newsgroup: rec.radio.shortwave
Date: 2006-08-15 12:29:38 UTC
From: TSCM Video <ctaylor@pinpoint-productions.com>
Message-ID: <1155644978.068782.192730@b28g2000cwb.googlegroups.com>
Source record: 88142

First of all, let me thank the many of you who have requested that we produce a "Tips and Tricks for Eavesdropping Detection" video similar to award winning issue awareness video, The Red Balloon about industrial espionage and eavesdropping (http://www.tscmvideo.com).

Then answer is yes and we are in the script development stage of what will probably be a two to four hour video. While I am relatively sure that we have covered most areas, I also accept that sometimes you can be too close to the tress to see the forest. What I need from the groups are ideas about what specifics you would like to see covered.

Also, we are going to press next week for the Spanish version of Telephone Eavesdropping and Detection, which is the textbook I used at the Texas A&M's Advanced Telephone Eavesdropping Detection 40 hour seminars. The book will cost the same prices as the English version, but will have a red cover. All 300 original technical illustrations have been converted to Spanish also. (http://www.tscmvideo.com/book-telephone-eavesdropping.html).

Since we do not have a Spanish website, we are currently looking for distributors/dealers in Latin America.

Thank you,

Charlie Taylor
ctaylor@pinpoint-productions.com

That's a great experiment, especially when taken as part of the body of work that has been done since the earliest days of audio recording.

What I think this shows, and quite conclusively, is that human interpretation of random noise, especially when coupled with the power of suggestion, is consistent across all tested recording methodologies.

Similar experiences have been reported using wire recorders in the 40s, reel to reel tape and cassette recorders in the 50s, 60s, 70s and 80s, and digital recording technologies in the 90s and to the present. All that's required is an imperfect audio delivery to the recording medium resulting in any form of random noise.

One of the most consistent aspects of these reports is the remarkable personal relevance of the perceived content of the recordings. Hmmm :-)

One way to verify the internal, rather than external sources of these messages is to play the same recording for different people and give different suggestions. Tell one subject you heard one particular message, tell another subject you heard a completely different message, and note the results :-)

One of the most delightful aspects of these auditory hallucinations is the intensity of the perception of the reality of the messages perceived. Like seeing faces in clouds, the human mind seeks to find order in chaotic data, and the more chaotic the data, the more urgently the mind seeks to order that data. This urgency to order data adds to the sense of certainty that a hallucination is "real."

I would say that the reason for the differences in perceived messages, depending on recording techniques, have to do with the audio bandwidth of the random noise being recorded. Your observations in that regard are quite interesting and might show that the spectrum of the radom noise recorded has an effect on a subject's interpretation of it.

The perception of the random noise recorded using the scanner connection was likely influenced by the narrow audio bandwidth of the audio section of a typical scanner (3000 - 5000 Khz - near the center on human speech audio frequencies, for obvious technical reasons) resulting in the perception of "monotone," or lacking in frequency variation, "voices."

Conversely, white noise, by definition, includes frequencies from across the auditory spectrum of 20 Hz to 20Khz, and gives the mind much more to work with

Have fun with it, like the so-called "reverse speech" hallucinations made popular on Art Bell's radio show, auditory hallucinations are a lot of fun and the human mind is a delightful play thing.

Folks well versed in what are called "cold reading" skills (the ability to quickly determine what a person wnats to hear and then providing exactly that) have even earned money with this very phenomenon, calling this "ghost voices" or what ever else fits into the needs of their marks.

Is it real? Of couse it is - to you :-)

[snip]

From what I've read, ideas such as this have been floating around for years.
This is one of the experiments in the HAARP project.

Back in the 60s, there was even a fix-it proposed for the post EMP
ionosphere. They'd shoot a rocket to the upper atmosphere and explode a
charge to spread millions of tiny copper wires to restore reflectivity.

> recording of the environment without the possibility of rectification?

Jeff, this is sort of a bogus question. Several times throughout this epistle, you seem locked in on RF. If you truly believe that (RF that is), then yes, you DO need rectification of the RF signal to recover the audio modulation.

> And... a leading theory in EVP is: "EVP is considered to be radio
> frequency signals

so, if it's "radio frequency" signals, why use a tape recorder which is designed to capture AUDIO frequency signals?

> that inadvertently find their way into your
> recordings by way of cross-modulation, atmospheric refraction

atmospheric refraction is meaningless in this context. Just being used as a pseudo-science buzz word. If a ghost wanted to talk to you, why would he (she?) have to bother bouncing it off the ionosphere?

> or indirect rectification.

I believe the appropriate term here (and as used by the FCC) is "incidental", not indirect. Again, this relates to the poor design of the device in question and why the FCC calls such a case an "incidental" receiver.

> Many paranormal investigators feel that these
> voices or signals are somehow connected to ghosts."

"feelings" don't have much place in science.

> Let's say for the sake of debate that some voices using the EVP process
> are genuinely otherworldly or from another dimension.

"Other dimension"? More buzz words. How is a tape recorder or radio
receiver going to cross "dimensions"? If you are seeing or hearing
something, it is -obviously- already in *our* "dimension".

> They have to show
> up on our recording apparatus somehow,

Why? Says who? They may show up, but they don't "have to".

> and I guess the leading theory
> is that this is through RF signals.

Again, if you truly believe it is RF, why in the heck are you trying to
use an AF device (voice recorder) to capture an RF signal???

>
> If you would try EVP for yourself and judge the voices you capture on
> an objective, one-by-one basis, instead of dismissing every voice

I question the moronic politicians of this world on a daily basis...

> It just so
> happens that EVP is the best way to get evidence of that world.

Says who? What ever happened to good old tin trumpets, table tipping and
ectoplasm??? Must not be high-tech enough. Even spook chasing seems to
have "gone digital". :-)

>>> PS The Panasonic RR-DR60 recorder was yanked from the market because of

Huh? "Working from the ground up"? I truly do not understand what you are trying to convey here. Are you saying it (their tape recorder) won't work on Monday, will work a little bit on Tuesday and will get all kinds of voices on Wednesday? If so, what would change in the hardware? What would, hardware-wise, be different in the "holy grail" model that would cause it to work all the time?

> Sure, my
> recorder didn't even pick up voices at first. Then gradually some

A big stretch in the first place, but even by your own description above, it would have to do with the -person-, NOT the model of tape recorder they were using, "holy grail" version or otherwise.

Sadly, critical thinking is becoming a vanishing commodity in the 21st century... :-(

Steve the Electrical Field emission for 13 Mhz is 15,484 uV/m @ 30
Meters. Omega One Radio is running a power output 100 watts, and the
electrical field emission a 17.5 meters is 2,000 uV. At 30 Meters the
field emissions is 0 uV You Also have to remeber that 13 MHz is the
22 meter Shortwave Band, which does skip. It it possible to hear part
15 stations on that frequency. You can put out a higher power and
produce the required electrical field.

> > their's no law against that. As a

Dear Will,

The Sony ICF-SW7600GR is made in Japan and to a very high construction standard too, not even to mention its excellent performance for a small portable shortwave receiver. It's an excellent value, too, especially when on sale for under $130.

> Re a coming Chinese-made radio: Could this have been the

> or high-end JRC or the big Ten-Tec?

The original thread was about a proposed Degen Model 1108. The writer asked for people to comment on features desired for such a radio. I believe the designers are considering a radio along the lines of the Grundig Satellit 800 or Eton E1, but of much higher performance quality, along the lines of a tabletop.

There is a Yahoo! group - < http://groups.yahoo.com/group/de1108/ > about this radio which you may want to join.

> Will

At least one Chinese-made radio is very good and well-made, at least in my opinion and experience, and that is the dual-conversion Sony ICF-SW35, the only Sony-brand shortwave receiver manufactured in China. It's a bit short on features (most notably the lack of a keypad), but offers very good performance, especially at its price of under $90, and

its construction quality and ruggedness is second to none. I own two and both are kept in the glove compartments of my cars - winter and summer - with the batteries removed. When I re-install the batteries, the memories are still there and all I have to reset is the clock. The radios are now over four years old and they always work perfectly.

Best,

Joe

Message-ID: <ebt5osrui1@ctb-nnrp2.saix.net>
Source record: 88269

Arrived in my little village in Afrika 8 days after Paypal payment in good order well packed.
Very pleased with it - lovely full sound, better than my other portables.
Performance also better than my other portables:
reception sensitivity and quality
FM - outstanding, picks up weak stations the others can't even hear
MW - this is most important for me as my one and only AM MW BCB station is 120 miles/200 km's away.
much better than my Sangean ATS818 and slightly better than my GE SRIII - very pleased with this.
SW shortwave - some parts of the band same as Sangean 818, others much better on the RP2100.
two nice filter settings - wide with lovely sound when you are in the clear and narrow for when things are crowded, but still with good audio.

size of the radio is same as the Sangean ATS818 and slightly smaller than the GE SRIII
operates on either 4 X AA or 4 X D cell batteries, or mains 220 volt AC, also will charge batteries
Delivered to my door for a total cost of $106.90 which includes shipping to Africa and insurance.

Seller was Tquchina on eBay who supplies the English language fascia on the radio - the other seller Liypn sells only Chinese markings on the fascia of the radio. Very satisfied = excellent service and Tquchina kept me informed all the way down the line. A big worry for me as some sellers get shipping to Africa totally ballsed up.

Evening time and the AM MW BCB DX really boomed in on the internal ferrite loop - stations 4/5000 moles away came in at readable DX quality like France Info Nice, BBC Cyprus, Saudi Arabia and India AIR Nagpur = very impressive.

What you may not like:
No SSB reception
Presets drive me mad - as there is no direct keyboard entry of preset number you have to rotate through the ten presets upwards. This means that if you are on preset two and want to get back to preset one, you have to go through to preset ten before getting back to one again. Maddening and the only feature of this superb radio that I really don't like.

Overall a great radio for my purposes knocking about the house, with superb FM and MW performance like I have never come across in a portable. For me in Africa a great buy and superb value for money. A Sony 7600GR retails here for $285 !#$%^&

> million now saying "Do you want fries with that"?

I repeat the FACTS - The Economy is rip roaring along which is why the interest rate has been
raised 17 consecutive times after interest rates were at an all time historical low. They are still historically low. The unemplyment rate is far below historical norms. The price of a new home has tripled in the last decade(?) indicating that the economy is very strong.

> The only thing I question is that the 2.5 million figure is probably too
> low.

Deal with the facts instead of your drug induced stupor.

> Wally-Fart is a general, across the spectrum, all kinds of merchandise,
> department-type store and 85% of all the stuff on their shelves is
> "Made in China", which means that 85% -ain't- made here. Just exactly
> where did all -those- manufacturing jobs go? Supersize that, sir?

Manufacturing jobs don't matter. Nobody wants to toil in a factory. Manufacturers pay Chinese factories and workers a pitance while they make a 90% profit on the goods which they simply placed their name on the package. Look at Grundig for example. The so called manufacturers are making money by name recognition and control of distribution to relatively rich Ameicans. The Communist Chinese government is drooling over this distribution channel which is why they are attempting to buy big name American companies. Perhaps GM soon? Look at IBM, now Lenova. Is it Maytag that was bought? Some appliance company was bought by the Chinese fairly recently. In fact they have a token factory in the southwest somewhere that they use as propaganda to show how much they care about the American worker - BWAHAHA.

> All the auto companies (AND their suppliers)* are on thin ice, major
> airlines in bankruptcy, Delphi wants their employees to take a 50% pay
> cut, Northwest Airlines wants their flight attendants to take a 40% hit.

> (I'm sure YOU wouldn't mind taking a 40-50% cut or just outright losing
> your job).

Your pointing out specifics, again. It doesn't matter. The only statistic
that matters is the aggregate.
Which is the only statistic that the Sec Treasury concerns himself with.
You can point out an ailing company even in the best of economic times. The
Neo-Liberal Communists simply prey on the economic ignorance of the masses
by repeating senseless propaganda.

The economy of the U.S. has moved away from industry such as manufacturing.
Old manufacturers are still around but they are outsourcing the
"manufacturing" end.
In fact it is based on the Wal-Mart model. Wal-Mart has changed everything.
That is a fact. Burn down your local Wal-Mart if you are so inclined.

> * The money spent by GM on their vendors is second only to the money
> spent by the Department of Defense with their vendors. NOT the trivial
> case. Your conspiracy theory about the auto companies aside, if the auto
> mfrs did go belly up, it would be a MAJOR hit to the -national- economy.

Bankruptcy doesn't mean the disappearance, poof up in smoke, of a company.
It certainly won't be with GM except for their pension obligations, sad to
say.
What will probably happen is that GM will follow the Wal-Mart model like so
many other old manufacturers.

Get your job skills updated. Go to night school. Nobody needs a factory
worker in the U.S. any longer.

Just some final thoughts:

IF there -were- ghosts...

...why would they just say random words for everyone to hear? Just 'cuz they're dead doesn't (necessarily) mean that they are stupid.

Finally, if they are smart enough to create an RF signal and smart enough to modulate that signal, wouldn't they be smart enough to figure out how to just simply whisper an actual message (not random jibber jabber) into the ear of the intended recipient?

Sorry, but your whole concept seems flawed.

>

A back of the envelope calculation says you are way over the legal
field strength if you're running 100 watts. You can calculate the
power it takes for an isotropic radiator to produce a field strength
of 15,484E-6 volts/meter as follows:

1. The area of a sphere of radius r is 4*Pi*r^2. An isotropic
radiator emitting P watts at the center of the sphere will produce a
power density of Pd = P / (4*Pi*r^2) on its surface.

2. The power density is related to the electric field and the
impedance of free space (120*Pi) by the formula Pd = e^2 / (120*Pi).

3. Solving (1) and (2) for the power, P, you come up with P = (er)^2 / 30.

So, for an "e" of 15,484E-6 and an "r" of 30, P = 0.00719 watts, or
roughly seven milliwatts.

Since antennas are not isotropic, the power must be reduced even further
so that the electric field will not exceed the legal limit in the
direction of highest antenna gain.

This calculation ignores line losses and final amplifier inefficiencies,
but there's no way in Glendale you can convince me that you can take a
100 watt transmitter and manage to lose so much power that you have
seven milliwatts or less being radiated.

All my DeVry Correspondence School instincts tell me that you are
seriously in violation of the law. Other DeVry grads at the FCC will
immediately agree, as will our distinguished alumnus, KC8JBO, the only
man to have discovered negative VSWR.

Be careful, Todd, and rethink your current station configuration.

Ran into a certain well known cheap-assed ham
radio bastard operator today. Everyone in the local
clubs know him. He stinks, has greasy hair, bathes
monthly (?) and is known to crash ham widow's estate
sales the day after they plant the SK. In short the guy
is a true F-N low life pig. (...you prolly already know
just whom I am speaking of eh...? grin) Drives a beat
up old car with 10 antennas on it.

Today I caught this bastard ham stinkball rooting thru the
battery recycle boxes at the local office supply store.
He dug out two Dell laptop batteries and quickly shoved them
into his dirty overalls pockets he was wearing. (The store is
staffed by college age kids who don't give a s--t anyway
so they let him clean out the recycle bins of
batteries, toner cartridges, old cellphones and other similar
stuff as it's less work for them.....good point I guess.)

Apparently this guy has already hit every recycle bin where ever
he could get away with it, and is hoping to claim all these dead
Dell batteries as his own on their recent Laptop Battery Recall Program
that's been in the news of late. Then when he gets the replacement units
he plans to re-sell them at a profit online. Talk about a cheap
opportunistic
scrounging bum! Only a smelly ex-hamfest bum who used to sell crap at
hamfests
and now scams people on e-Bay could think of something like this....

More Japanese civilians were killed
during the firebombing of their cities.

To use a phrase from The Godfather;
"Nohing personal... just the business of conducting a war"

On a personal note;
WWII was probably the last war where
conduct was unfettered by concerns of "world opinion".

I don't know about any Dell recall, but I routinely go through the recycled battery boxes when I see them. I often get NimH batteries which after being reconditioned (discharged/recharged) a few times are perfectly good.

Geoff.

These are all DRM radios, though. If you look around, you should be
able to find some of the non-DRM variety. No reason to spend your hard
earned dollars on technology that's already obsolete.

Your explanations sound good in theory, but do not explain how some EVPs show up so loud that they are not just an auditory hallucination of the white noise. Some are actually louder than my *own* voice asking questions on the tape. Of course the accent was so thick that people can't decide on what exactly it's saying, but they more most startled by the sheer presence of it. Some question me whether it was a joke because to them it defies rational explanation.

If rectification was taking place through a digital recorder, what would be the maximum volume of it? I've never heard of *loud* voices showing up. In fact, the quality and type and accent of the voices reach such a wide spectrum that they are impossible to all explain away by any one theory. But the more theories you use to try to explain them all away, it's more plausible there may be a paranormal connection - that is just for argument's sake. After hundreds of hours of research with thousands of voices, and the odd events surrounding my life during that time, I firmly believe most of these voices are paranormal in nature. It's also interesting that nobody has asked me to listen to the clearest voices. It would be impossible to convince you of their paranormal origin because I'd be asking you to change your belief system over something you've never researched or tried yourself. Now *that* would be kooky.

Jeff

> cuhuln

I too use an RCA recorder, a 5012A model. My friend uses a 5012B model but it doesn't work as well. Many say it depends on who is using the recorder. For some reason I don't get nearly as many voices when the recorder is left by itself, but if the operator is near it, the more success you'll have. I think it's because they use your energy somehow.

Get an audio cable and plug from the mic jack on the recorder to the earphone jack on the scanner, tune to a random frequency with only static and press record. Record for about 30 seconds and upload the tape onto your computer and amplify the sound (shareware software like Cool Edit is best, and also the use of a Denoiser helps:

http://www.speechpro.com/production/?id=468&fid=7

click on "Denoiser Demo" on top right of the screen - it only allows you to denoise 30 seconds at a time but that's perfect for EVP recordings. I have not used the Virtos Denoiser or other newer denoiser software which have popped up overnight).

Some here may argue that the use of a denoiser may corrupt the results further, but experiments with it using my own faint voice over a lot of white noise proved beneficial in that the denoiser clearly brought out my voice which was nearly inaudible over the static. Remember, everything in the universe involves energy. It would take a particularly strong spirit to yell or scream on a tape. Most voices are faint but as you record and experiment more they get stronger. Soon you'll recognize who they are by their voice.

For a control, do a separate recording of the frequency without plugging it through the scanner. For some reason the voices that appear through the scanner are more monotone, and the ones in the room with the scanner used as background noise are more dimensional in nature.

Good luck and feel free to email me if you need help.

Jeff

2039. Add money to your Paypal account with OPRAH _+oh=

Newsgroup: rec.radio.shortwave
Date: 2006-08-15 22:52:43 UTC
From: NSI <af.irani@afyhpami.com>
Message-ID: <2VyEg.57530$vj1.6611@bignews5.bellsouth.net>
Source record: 88231

Read this message until the end, and you will find out how the money flows in easy !!!!.
Follow the steps and it WILL work. Trust me !!!!!.

It's NOT illegal and it is NOT a scam !!!!!.

PROVEN ON OPRAH! Reported in the Wall Street Journal!!!!

The only thing you need is : - E-MAIL ACCOUNT
- PREMIER (FREE) or BUSINESS PAYPAL ACCOUNT
- $6 on this account (The only investment)
- 30 minutes of your time

There is no limit on how much money you can recieve, and you haven't got anything to lose with this Business program. I will explain how it works !!!!!.

Follow these 4 easy steps and it WILL work !!!!!.

STEP 1 : SIGN UP FOR A FREE PAYPAL ACCOUNT !!!!!.

Paypal is a free and safe way to pay and receive money on the Internet.
Creating a account is as easy as creating a MSN account.
Copy and paste the next line in your Internet browser and sign up.
HTTP://WWW.PAYPAL.COM

Be sure to sign up for a FREE Premier or Business account and not for a Personal account. You cannot receive CREDITCARD payments with a Personal account and we can't have that. Do we !!!!!.

STEP 2 : SENT $6 TO YOUR PAYPAL ACCOUNT

This is your only investment to receive the money with ease.

With your Paypal account, send $1 to each e-mailadres listed below.
!!!!! IMPORTANT !!!!! Be sure to use this SUBJECT : *PLEASE PUT ME ON YOUR EMAIL LIST* when you send the money.

1) martine@pilote.net
2) dexxatol@netcourrier.com
3) armygirl8568@hotmail.com
4) comjii@starband.net
5) sinnek@bellsouth.net
6) nsi@nelasat.com

STEP 3 : PUT YOUR E-MAIL ADDRESS ON THE BOTTOM OF THE LIST

After you have send $1 to each e-mail address, put your e-mail address on the 6th place.
Remove e-mail address number 1, and move each e-mail address 1 step up the ladder.
!!!!! IMPORTANT !!!!! BE SURE THAT THE E-MAIL ADDRESS YOU USE IS THE SAME AS YOU USED TO SIGN UP AT PAYPAL.

Remember that this is LEGAL. You are creating a service : an e-mail servicelist.

STEP 4 : UPLOAD OR COPY THIS MESSAGE TO NEWSGROUPS, FORUMS ETC AND EMAIL IT TO ALL YOUR FRIENDS!

There are 32,000 newsgroups. Upload or copy this message to at least 200 newsgroups or forums etc, but ..... remember that the more your upload the more people will see your message and the MORE MONEY WILL FLOW IN.

How to upload to newsgroups and forums? :

After you have followed step 1,2,3 and 4, save this message (and copy so you can use it again).
Use your Internet browser and Outlook Express or another newsreader and try to find FORUMS, NEWSGROUPS,
BULLETIN BOARDS, DISCUSSION GROUPS, CHAT SITES and ONLINE COMMUNITIES. Use GOOGLE or use a NEWSERVER.
Use every option to post this message. Download PostXpert to send 1 message to more NEWSGROUPS at the
same time.

!!!!! REMEMBER !!!!! The more you post this message the more MONEY WILL FLOW IN.

Why does this Business program work so well !!!!!.

Lets asume that from the 200 (or more) messages that you have posted, only 5 people respond, you will have your
$6 back that you have invested. Those 5 people will each send at least 200 messages with your e-mailadres on
number 4. That's 6 x 6 x $1 = $36. The next 25 people will also send 200 messages with your adres on number 3. That's 36 x 6 x $1 = $216. The next 216 people also send 200 messages with your name on number 2. That's 216 x 6
x $1 = $1296!. Those 1296 people again also send 200 messages with your name on number 1. That will give us a total of 1296 x 6 x $1 = $7,776.

Now the last tier! 7776 x 6 x $1 = $46,656!!!!!!

This is only a EXAMPLE with 6 reactions. You WILL get MORE responses than that.

Remember that most newsservers will leave the posted messages on there servers for about 2 weeks. If you will post your message again, it WILL again start from the beginning. So you can repeat this over and over again.

Everyday MILLIONS of people are ONLINE and reading these messages, JUST LIKE YOU RIGHT NOW. I also was sceptical in the beginning and have read a lot of these messages. I also thought that it was bullshit.
Until I thought : What the hell!, only $6. What's $6 and a couple of minutes of my time to solve my money problems.

!!!!! REMEMBER !!!!! Follow every step, and IT WILL WORK, TRUST ME. !!!!!

!!!!! BEST WISHES AND GOOD LUCK !!!!!

w)O>+;)<9UVS;F>qaGL<Uq#v`V6(F]- rM;$g+!4IIQ*827?H4

If one of them are the RR-DR60 model, you'd have a goldmine.

The first night I conducted an EVP experiment, I used an old photograph from the 1800s and a genuine 1920s William Fuld Ouija board as the backdrop. I lit some candles and asked for communication (I have never gotten a Ouija board to work, am not sensitive to spirits in any way, and cannot be hypnotized). I made some recordings and got a melodic humming voice of a woman (in the photo was an unknown woman holding her baby). On the second recording I asked who did the humming, "Was that you?", and a deep (almost demonic) sounding voice said, "It was."

This startled me so much that I stopped all experiments until I moved to a new town and met a lot of people at the steakhouse where I work who were interesting in conducting paranormal experiments. I finally met a guy who has been my fellow researcher and best friend and we've uncovered some amazing results which are still nowhere near a peak. It is because of these results that I feel it best to start passing on our techniques to others who are interested, in hopes of opening up their minds to the possibilities of EVP and ITC.

However, be forewarned... a lot depends on your resonance (vibrational rate) - if you are using drugs, are disturbed, or are in a negative mindset, you tend to resonate with more negative spirits (which are closer to this plane of existence, as opposed to the astral beings which are higher up with a higher vibrational rate). I must admit that the spirits which followed me back from the cemetery were of this mindset and made many threats, countless vulgarity, and so on. A girl who came with us to the cemetery had a panic attack and nearly had to go to the hospital. Weeks later she was exorcised, though I was not present and can't truly say whether she had a demonic presence surrounding her. Chances are (if it was not something in her own mind) it was a negative spirit which latched onto her (she was deeply Christian yet interested in the paranormal). I have only seen her once since moving to Daytona to a church camp.

When she came by one evening I played for her and her boyfriend's sister (who is sensitive) the tapes at the cemetery the night she had the panic attack. Almost simultaneously, my disabled ADT alarm started

sounding flashing the "Trouble" light. This bothered me since the alarm was fully non-functional and I had even broken into my own house before after losing my key without the alarm sounding. It has never again done that, and this was over 6 months ago.

Anyway, I could type a book about my experiments which seemed to bring on questionable events (even more startling since I am not sensitive - I use this electronic equipment as my eyes and ears, though I still feel that I'm wondering around in a darkened room without a flashlight).

I hope some of this helps. Good luck on your endeavour if you feel you should pursue it. I highly recommend at least a few experiments - just experiment at a healthy dose and don't go to abandoned cemeteries unless you really want to invite negativity back to your home.

Jeff

The Socialist Democrats are trying to find a way to turn the tables on a backfired terrorist plot. The timing of the Hezbollah attacks and the increasing unrest in Iraq, all directed by the Communist Islamo-fascists in Syria and Tehran. clearly is not a coincidence. These acts of terrorism are a foreign attempt to affect the November elections in the Socialist Democrats favor. Do not be surprised if more terrorism occurs between now and the elections. The Islamo-fascists and Communists know that "the Bush Administration" is a big problem for them. They know they can have the Socialist Democrats in their pockets much like Impeached Clintoon.

Now this is indeed puzzling. Why would going to a cemetery, abandoned or otherwise, bring "negativity" back to your home?

Is -everyone- buried there a bad person? Weren't any good people buried there too? If there are "spirits", are you implying that they are all bad?

Please, I really am confused as to why the spirits would dick around
with scanners, white noise, RF, de-noiser software and all that
technical mumbo-jumbo.

How did "the spirits" ever get by before tape recorders and scanners?

If "the spirits" are so technically savvy, why can't they figure out how
to just whisper in your ear?

Yes, and that is a 100% absolutely true statement.

He *IS* the T-O-P guy!

The buck DOES stop with him!

He DOES have the final and ultimate say so over his "administration"!

By definition, everyone else in his "administration" is UNDER him and
serve at HIS pleasure.

It's a simple concept and I'm not sure what part of it you don't
understand.

No, it's not that. It's just that the "evidence chain" has not been properly controlled and it is just too easy to fake a recording. Mind you, I am not saying that you would do such a thing, but to us, just listening, would have no idea who recorded what we were listening to.

If it's possible to show a film of Forrest Gump (a fictional character) shaking hands with JFK (a real character), it's not too big of a stretch to legitimately question how a voice got on an audio tape.

> Your explanations sound good in theory, but do not explain how some

> can't decide on what exactly it's saying,

"Loud" has nothing to do with paranormal. Loud is simply a function of the strength of the RF signal and how well modulated it is. Just as an example, there could be a foreign speaking taxi driver near by with his CB and linear amplifier. (You said in an earlier post that you had some kind of radio on 29 point something MHz. This is the CB band, and we all know there are a lot of barnyard and/or strange noises/voices on CB). ;-)

SeeingEyeDog wrote:

> Manufacturing jobs don't matter.

Don't matter? Oh, really? So you are saying its OK for the country to
trade -GOOD PAYING- manufacturing jobs for -LOUSY PAYING- "service"
jobs? Because that is EXACTLY what is happening.

Nobody wants to toil in a factory.

Be careful, now. Don't say "nobody". Have you considered that they may
much rather "toil in a factory" for $20-30/hr rather than toil at
Mickey D's or make beds at the Holiday Inn for $5/hr.

> Manufacturers pay Chinese factories and workers a pitance while they make a
> 90% profit on the goods which they simply placed their name on the package.
> Look at Grundig for example. The so called manufacturers are making money by
> name recognition and control of distribution to relatively rich Ameicans.

And if the "relatively rich Americans" are losing their good paying
manufacturing jobs, they ain't gonna be relatively rich very much
longer, now are they?; i.e., the people making $5-10 an hour aren't
going to be able to afford a lot of products.

> The Communist Chinese government is drooling over this distribution channel
> which is why they are attempting to buy big name American companies. Perhaps
> GM soon? Look at IBM, now Lenova.

So what's yer point? You apparently see Lenova as a good thing, I see it
as a bunch of IBM jobs out the window.

> Is it Maytag that was bought? Some
> appliance company was bought by the Chinese fairly recently.

Not quite right--the Chinese tried but it fell through and Maytag went
to Whirlpool.

>> All the auto companies (AND their suppliers)* are on thin ice, major
>> airlines in bankruptcy, Delphi wants their employees to take a 50% pay
>> cut, Northwest Airlines wants their flight attendants to take a 40% hit.
>> (I'm sure YOU wouldn't mind taking a 40-50% cut or just outright losing
>> your job).
>
> Your pointing out specifics, again. It doesn't matter. The only statistic
> that matters is the aggregate.

Delta, Northwest, American, United, Ford and GM doesn't matter? GM with
almost as many suppliers throughout the country as the Department of

Defense? The entire Tool and Die industry dead and gone to China? Sorry,
these aren't "specifics", these are *entire* industries.

> Which is the only statistic that the Sec Treasury concerns himself with.
> You can point out an ailing company even in the best of economic times.

" -AN- ailing company"? Sorry, nice attempt at spin, but we are talking
about *MULTIPLE* AILING *INDUSTRIES*!!!!

> The
> Neo-Liberal Communists simply prey on the economic ignorance of the masses
> by repeating senseless propaganda.

Like you believing bush's propaganda that "outsourcing is good for this
country"?

> The economy of the U.S. has moved away from industry such as manufacturing.
> Old manufacturers are still around but they are outsourcing the
> "manufacturing" end.
> In fact it is based on the Wal-Mart model.

Whatever the hell that is. Do you mean squeeze every last penny out of
their suppliers (even to the point of driving some out of business, a la
Rubbermaid), pay their employees a shit wage, make their medical so
costly that only 30 or 40% of their employees can afford it, sell their
stuff in a country that didn't manufacture it and soon won't be able to
afford it, no matter how cheap it is. Do you mean THAT model?

> Wal-Mart has changed everything.

We agree on something.

>> * The money spent by GM on their vendors is second only to the money
>> spent by the Department of Defense with their vendors. NOT the trivial
>> case. Your conspiracy theory about the auto companies aside, if the auto
>> mfrs did go belly up, it would be a MAJOR hit to the -national- economy.

> Bankruptcy doesn't mean the disappearance, poof up in smoke, of a company.
> It certainly won't be with GM except for their pension obligations, sad to
> say.

Yes, sad to say. And don't forget the Delphi and Northwestern examples
(and no, don't start in about "specifics" again). These two companies
are the model for the way the whole nation is going. It won't be "poof
up in smoke" but it WILL be either a job at half pay or no job at all.
(and this hardly jibes with your "relatively rich American" story).

> What will probably happen is that GM will follow the Wal-Mart model like so
> many other old manufacturers.

The Wal-Mart model as in shit wages and un-affordable health care? THAT
model??? You are wishing -that- on our country and you don't see a
problem with the country following your 'Wal-Mart' model????

> Get your job skills updated. Go to night school.

Too late, got my University degree, retired from a *** figure job and have a ***** figure retirement fund. I'm OK, but thanks for your concern. I just worry about the rest of the country and the future of our kids.

There are no DRM stand alone radios being sold. So far you can only buy computer assisted radios. It's still vaporware but this is the most likely stand alone consumer radio by Sangean, the DRM-40. Maybe you can buy it in a couple of months.

The power in wattage and the electrical field are not related because a power output in wattage can produce different fields depending on lengh of coax, antenna, antenna height...and your friends in the Office of engineering and technology at the FCC will tell you that. The antenna I'm using is a very imefficient antenna, in fact the signal is acually coming out of the end of the coax. The coax is a 65 feet of crappy coax I had that had been hit by lighting a few times and one piece even has holes in it. I have a Field strenght meter and at 17.5 meter I'm only getting a power reading of 2,000 uV. At 30 meters I'm getting no voltage. The thing you habe to remeber is that watts can produce different electrical fields and it's the electrical field the FCC is looking at not wattage.

Evasion noted again.

HD/IBOC is evil because it messes up the AM band, but when the US government wants to ruin short wave reception for the whole world, you are completely ambivalent.

It appears you have no high moral ground from which to preach to David Eduardo.

You are a complete, dishonest fraud.

Spare us your normal Canadian/Mexican/Japanese bashing tirade. It's worn out.

mike

I wouldn't have a Dell computer (desktop or laptop) even if it was for free.I dont want my house to get burned down.About three years ago,a guy at the Goodwill store said his wife bought a new Dell desktop computer.A few months later the capacitors on the motherboard started leaking and ruined her computer.Did she fill out the warranty card and send it in when she bought her computer?,I asked the guy.He said,No,she did not.

Warranties are no good if you dont take advantage of them.My new Velocity Micro Promagix computer was covered by Velocity Micro Computer Company from day one whether I had filled out the card and sent it in or not. www.velocitymicro.com are the best computers in the World.

Heck no. He likes his dogs drunk and naked.

He himself wears the women's underwear while cruising the 'net for
breast enlargement creams. He claims to have size D 'man boobs' which he
is having a difficult time finding brassieres for.

You will have to direct any questions of a really personal nature to
cuhulin himself, as only he knows the full depth of his lecherous depravity.

Mark, I tried for several months for Pascua, but 5643 gives nothing, not
even Auckland or Nandi, and the 8 megs frequency is blocked by a loud
interference source. Thanks for your help anyway though.

Yes, it does work under NAFTA but only to a limited extent. There is a section in NAFTA dealing with parts from other countries that are to be incorporated into finished products in a NAFTA member country. This section deals with regional content in which finished products need to have a certain percentage of parts from the region. In the case of loudspeakers it is fairly low (20%) whereas other goods require at least 50% regional content.

I'll give you partial credit on your statement ;-).

The US trade deficit with Mexico is nowhere near as large as the trade deficit with China.

What a truly absurd statement. Manufacturing for weapons/military,
biomedical industry, petrochemical/chemical industries and so forth are
important segments of the economy. For whatever reason, you've chosen to
focus primarily on the electronics industry.

Nobody wants to toil in a factory.
> Manufacturers pay Chinese factories and workers a pitance while they make a

There's a difference between an ailing company and an ailing economic
sector. It also doesn't alter the fact that the USA has gone from a
creditor nation to a debtor nation over the last several years.
Primarily due the spend, spend, spend nature of GWBushevik.

If I use a Budwig Dipole Center Insulator (http://www.k1cra.com/images/products/original/299.jpg) for my random length long wire antenna, should the length of the wire coming off each side of the center insulator be equal?

My yard will allow me to have one side of the insulator about 200 feet long and the other side only about 50 feet. Should I even mess with the center insulator and just go with a random length of wire?

I am just running this into a DX398 for occasional shortwave listening. Thanks.

For your purposes you'd be better off just running a random length of wire. And since you're running a portable you probably won't want to make that wire to terribly long as you might overload the radio.

Don't worry about the two sides being equal. That's only important if
you intend to transmit and need the antenna to have a predictable
impedance. For receiving, the name of the game is to put up as much
wire as possible.

A random length of wire will probably work just fine.

You can't get around physics, Todd. The power density is directly related to the electric field through an Ohm's law type of relationship, expressed as the square of the r.m.s value of e, divided by the impedance of free space. Once you know the power density, it is a matter of summing that power density over the radiation pattern of the antenna to figure out the total radiated power. Therefore, there *is* a relationship between radiated power and field strength. In the case of an isotropic radiator, the relationship between radiated power and field strength is easy to calculate, and it provides one with a limiting case which can act as a guideline.

> engineering and technology at the FCC will tell you that. The antenna
> I'm using is a very imefficient antenna, in fact the signal is acually

I'm not interested in your rationalizations, Todd, because I'm not the one who is at risk. In this real world, your power output is about five orders of magnitude larger than the power theoretically needed to produce the maximum allowed electric field. To me, that would be a cause for great concern.

If you want to risk an FCC enforcement action against you, be my guest.

2143. Re: Is there a high end SW radio from China coming ????

Newsgroup: rec.radio.shortwave
Date: 2006-08-16 15:51:00 UTC
From: Will <wgmartin99@yahoo.com>
Message-ID: <1155743456.025206.101370@b28g2000cwb.googlegroups.com>
Source record: 88305

Just to add a bit to what I posted before:

We know that China makes SW broadcast transmitting equipment;
they've installed some in Cuba and there were a number of Chinese
technicians stationed there for SWBC support -- not sure if they're
still there or not. Anyway, one would think that a Chinese company
making SW transmitters might get involved in making high-end SW
receiving gear for monitoring, in addition to whatever the Chinese
military or intelligence organizations might want made for them.
Probably would have been more cost-effective, at least in the past,
than spending foreign currency to buy multi-kilobuck receivers from
overseas. They certainly have the capability to clone Watkins-Johnson
and other such receivers made for those markets.

If a $5-$10 K level receiver came on the market for $1K list, I wonder
what the possible sales figures would be?

The Torus Tuner loop is 16.5" shortwave, D.C. blocked (so it's ok for SW100 or other radios which output voltage on the antenna jack), R/C amp (seperate, optionally connected box), all with 3.5mm jacks. The antenna tunes slightly above 19 mHz (Ed tested my antenna and told me in an email before shipping it out - I don't tune to anything above 18 mHz).

I'm not selling the antenna at this second, until I do more testing with the new antenna/radio and different connection methods. I may end up placing the antenna and SW100 on ebay. Probably another few weeks.

> to Whirlpool.

Don't buy Haier appliances. China's Haier Group, a fast-growing appliance maker known as the General Electric of China, runs a refrigerator factory in the U.S.

In South Carolina, a Chinese factory wins friends, a trend that is part of that country's efforts to boost its image in the United States.
http://economistsview.typepad.com/economistsview/2005/07/china_sends_a_f.html

Besides, this is a repeat of what the Japanese were doing about two decades ago. The word then was that we all will need to learn Japanese. The only diference between then and now is that the Chinese currency is manipulated by the Communist Party to artificially keep their currency low relative to the US dollar.

Not quite:
Communist China President Hu Jintao Order Led to Wal-Mart Unions

In a written order to the All-China Federation of Trade Union (ACFTU - the
only Union game in China is run by the Communist Party) in March, Hu said,
'Do a better job of building (Communist) Party organizations and trade
unions in foreign-invested enterprises,' the Beijing News reported, citing
the group's records.

2160. [ot?] Debunking Neo-Liberal Communist Myths

Newsgroup: rec.radio.shortwave
Date: 2006-08-16 18:02:14 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12e6nd1rga3tm4f@corp.supernews.com>
Source record: 88322

...
Debunking 9/11 Myths: Why Conspiracy Theories Can't Stand Up To The Facts"
expands to book-length a collection of articles Popular Mechanics published
in March 2005. The book contains new appendices and updated analyses.

"Debunking" begins with an insightful and blunt foreword by Sen. John
McCain, who observes, "Conspiracy mongering is no small phenomenon. . . .
These theories come in nearly infinite variety, but all reach essentially
the same conclusion: that the U.S. government, or some shadowy group that
controls it, organized the attacks as part of a master plan for global
domination. But the truth is more mundane. The philosopher Hannah Arendt
described the banality of Nazi evil; the 9/11 hijackers were also ordinary,
uninteresting men with twisted beliefs."

Counterterrorism expert Richard Clarke's blurb for the book describes it as
"reliable and rational" and that the government "isn't competent enough to
pull off such conspiracies and too leaky to keep them secret."
...
"Everyone is entitled to his own opinion. He is not entitled to his own
facts."
...

Common Western Misconceptions About China

China has been ignored in the West - owing in part to the daily torrent of thunderous news about terrorism, ever since the terrorist attack of 9/11, and actual wars such as the Iraq War. The "China threat" is an abstraction, like the German threat in 1938, and the mainstream media always prefer the concrete to the abstract.

One concrete murder will garner more mainstream television time and public attention than the abstract fact that (according to my Statistical Abstract of the United States) there were - in the United States in 2002, for example - 1.4 million violent crimes, including 16,000 murders. War on violent crime? The U.S. political establishment is not interested.

As for the "China threat," there has been nothing concrete to show on mainstream television except parading Chinese soldiers - a newsreel shown on mainstream U.S. television for many years. But surely in every country there are soldiers, and they march during military parades.

It would be different if there were a newsreel of Chinese dictator Hu Jintao showing his newly appointed generals the West on a world map and exclaiming, "This is the West we will annihilate by our assassin's mace weapons unless the West surrenders unconditionally." This would be as good for U.S. mainstream television as a newsreel of a witness to an honest-to-goodness murder.

But there is no newsreel of Hu explaining China's geostrategy to his generals. An integral part of this geostrategy is the total surprise, suddenness, improbability for the enemy of the assassin's mace attack launched by the dictatorship of China to annihilate the enemy unless the enemy surrenders unconditionally, and the dictatorship of China obtains the world as its colony.

The Western thinking of today is dominated by mainstream television, which does not think, but shows what it can show - such as Chinese soldiers marching in a military parade.

Naturally, small wars in small countries, such as the current war between Israel and Hezbollah in Lebanon (Syria, Iran?), engulf Western mainstream television. Such wars present an infinite wealth of telegenic scenes of carnage (or mass murder), as compared with the "China threat," which presents no such images.

Linked with this mainstream television "showing" instead of thinking is the Western general mental regression due to mass or pop or "democratic" culture and hence the absence of nationally or internationally known thinkers - in particular, political thinkers.

The Western culture of today is parochial. Many Americans know nothing of the outside world, and hence many of them assume that the outside world is at a lower stage of "development" and will or must strive for the same higher stage, which it will never reach, since the United States will meanwhile "develop" to a still higher stage.

In a (democratic) consumerist society all economic fields tend to advance to the same satisfaction of consumption, for capital will flow to those fields in which the consumers are not satisfied and are ready to pay more for their satisfaction. The result is what many Westerners perceive as (even or uniform) "development," whereby some countries are "developed," while others are "undeveloped."

Hence the military power is subordinated to the same "development." Since the United States is "economically developed," it is also "militarily developed" to the same degree.

It has not been noticed that the "developed" United States (population over 300 million) has been unable to cope in more than three years with 7 million Sunni in a by no means "developed" Iraq.

In Stalin's Russia of the 1930s most of the population lived in the medieval countryside. But Stalin's armed forces, with their new tanks and artillery, routed the German troops at Moscow in December 1941.

To win, military development should be not "even" or "uniform," but on the contrary "lopsided." If Hitler had invested all available resources into the development of nuclear weapons and paid no attention to tanks and artillery, he would have attained world domination. The "even" or "uniform" development of his armed forces led to his defeat and suicide.

The Pentagon's surveys of China assume that the goal of China's dictatorship is to overtake the United States economically and hence militarily. This is impossible since, when China "develops" to the present stage of "development" of the U.S., the latter will be more "developed" than now.

It never occurs to the authors of the Pentagon's surveys that

(1) Since the population of China exceeds that of the United States more than four times, it is inevitable that China will exceed the U.S. in all "indicators of development," with the perspective to exceed them four times.

(2) China strives not for "even" or "uniform" Western "development" to catch up with the U.S., but for the lopsided growth of post-nuclear superweapons to assassin-mace the U.S., as the latter would have nuked Japan if Japan had not surrendered unconditionally (and if the U.S. had had a sufficient stock of "atom bombs").

In the West the word dictatorship is never applied to China, and God forbid that Hu Jintao be called a dictator! Recall his visit in the United States. Isn't he the kindest man and the best friend of the United States?

Published in Beijing by Professor Chin Yunsheng of the Chinese Academy of Social Sciences is a book about torture in China. The professor describes 13 kinds of torture in China today. He says: "Torture in contemporary China is

rooted in Chinese history."

An outsider may assume that with such a system of suppression the dictatorship can well keep its population under control. No, the dictatorship is vulnerable and may collapse, as it did in Russia in 1991.

In June 2006, Zhengzhou University refused to recognize student degrees at one of its satellite campuses. What would the students do in a Western democracy? Lawsuits. Complaints to higher academic and civil authorities. Meetings. Demonstrations. Media. Election of a student committee to restore justice.

In China, some 10,000 students ransacked the university administration and the university library and looted the local banks, supermarkets, and shops.

Ironically, these 10,000 students believed that they were mistreated because China is a dictatorship, not a democracy, and so they came out against the dictatorship, including its universities, banks, supermarkets, and shops. A democratic uprising or revolution!

The only way for today's dictatorship to ensure its survival is to annihilate or subjugate the democratic West. Torture does not help. Besides, it also provokes discontent and the conviction that in the democratic West it is all different and as fine as in paradise. "The grass is always greener on the other side of the fence."

Donno: The clip is to fasten the antenna to a curtain rod, tree branch
or wherever to allow you to get a bit of altitude. Antennas love
altitude.

I am speaking from personal experience and the experience of the dozen or so people who went with me. Panic attacks, paranoia, threatening voices on recordings, etc. I've gone to other well-kept cemeteries and did not pick up *any* voices. But yet a vandalized old black cemetery with open holes in crypts, dug up graves, mounds of sand marking graves, etc., seemed to produce so many voices many were speaking on top of each other. Sometimes in one 10-second recording over 5 voices could be identified.

Why would there be so many voices in one cemetery, but not others? Why would my house then have so many voices on recordings when before going to this cemetery it did not? Why have people told me they have sensed spirits at my house? Why are some people so scared they have to urinate outside the house rather than go into the guest bathroom? Why has one of my relatives (since these experiments begun) actually see a misty presence of a woman in a brand new house (she has never witnessed a ghost before and has no reason to lie about what she saw). This is just the tip of the iceberg, yet none of this occurred *before* going to this cemetery.

Of course, all of this can be explained away. You can also either explain away the moon landing as a hoax or say it really happened ... two theories yet only one reality. You base yours on lack of experience with this sort of thing ... I base mine on what I and others have witnessed firsthand. Why don't you just spend some time experimenting on your own instead of assuming that all my experiences are irrevelant?

I'm not here to argue the afterlife. I only came here to try to come to another conclusion (for the peace of mind) that would explain these weird events, and so far (brain/pattern or AM stations) have led to more doubt than plausibility.

Jeff

> technical mumbo-jumbo.

Brilliant minds have often had trouble communicating their ideas to others. But that's another story. Considering spirits are made up of energy, they obviously need energy to communicate and implant their voices onto our equipment. One of the most brilliant minds ever, Thomas Edison, along with Marconi, Crookes, and many of the greatest scientists of the 20th century all believed it was possible to communicate with the dead through radio. I think any one of them would be smarter than most everyone in this group, and they obviously had a good reason to believe this was possible. The first EVPs showed up in the 1920s. Science has had all that time to explain them away, only more and more evidence is showing up to discount traditional theories.

> How did "the spirits" ever get by before tape recorders and scanners?

The way some of them still do - dreams, materialization (which happened to my relative), automatic writing, even some seances, and direct voice.

> If "the spirits" are so technically savvy, why can't they figure out how
> to just whisper in your ear?

Many of them do - but that would involve someone who is sensitive. Why do many sensitives belong to the same genetic traits and families? Some day a "sensitive/psychic gene" will be discovered. There are also a lot of equipment which picks up different forms of energy and radiation - radio waves, x-rays, UV light, etc. - yet you don't hear radio waves until they're picked up on your equipment. Who's to say spirits aren't energy which can only be picked up in our current 3-dimensional world by people of a different genetic background, dreams, and certain electronic equipment? Seeing isn't necessarily believing, and believing is almost never seeing. It's what lies within, not on the pages of some science textbook.

Thanks, overload is an issue. The 398 has a limited gain control. Is there
a receiver that can handle 200+ feet of wire without overload problems?

Mark, Just ignore them.

They only tease you because of the stupid things you say when you
follow up. Just ignore them and they'll give up.

Stop giving them reasons to tease you. It only makes you look
more stupid.

Take a break from the radio groups for a while, Maybe work on your
moon bounce some more.

I'm considering 2 different shortwave receivers and would appreciate the benefit of your experience. I want to be able to copy SSB and CW as well as general radio, so that limits the market.

The 2 I'm considering are the Eton/Grundig 4000A and the Sony 7600GR. They appear to be pretty much equivalent in features. What would be your preference? Or is there something else that's better in the same portable/feature/price range?

Thanks,
Fran McHugh

Ok, well to me that is wierd but interesting. So, if it is not strictly necessary to use any one RF frequency, perhaps, legalities aside, it would do no harm to use one of the FRS channels. FRS is FM and incoming signals should not disturb your AM experiments as long as your receiver is close to the signal generator's antenna. I do not imagine that any spirits would need a widely separated set of antennas to fit between, so therefore a low power signal such as what comes out of your signal generator should do for closelt spaced antennas. How far apart? heck if I know. 2 feet? Since you are using a signal generator, your power level can be very low so as to not interfere with others, and an antenna for transmit or receive at those frequencies need only be 4-5" long.

FRS:
462.5625 GMRS Simplex / FRS Ch. 1
462.5875 GMRS Simplex / FRS Ch. 2
462.6125 GMRS Simplex / FRS Ch. 3
462.6375 GMRS Simplex / FRS Ch. 4
462.6625 GMRS Simplex / FRS Ch. 5
462.6875 GMRS Simplex / FRS Ch. 6
462.7125 GMRS Simplex / FRS Ch. 7
467.5625 FRS Ch. 8
467.5875 FRS Ch. 9
467.6125 FRS Ch. 10
467.6375 FRS Ch. 11
467.6625 FRS Ch. 12

467.6875 FRS Ch. 13
467.7125 FRS Ch. 14

You might also try the "ISM" frequencies, as long as there are no big machines operating on them and radiating powerful signals, you should be fine. There is a listing of those frequencies here:
www.tscm.com/FCC47CFRpart18.pdf

It seems to me the biggest challenge is to build the spectrum generator for all those audio tones. Perhaps an old electronic organ, one with the feature of a separate tone oscillator for each key, could be used. You can pick off the sinewaves at the oscillators if it is an old enough model.

Thanks for the reminder on the calculations. Funny but a couple of my younger colleagues who think themselves quite the electronics men still do not think 'space' has an impedance. There is nothing there, after all.. That is what too much PCB layout/CAD work wioll do to one. hehe

I saw the Eton E1 when I was perusing their site. It isn't quite as portable as I'd like and we already have XM radio on our motorcycles. With the story re: Satellite Radio's huge financial losses, it may not be a long time phenom anyway...

I have a Radio Shack communications receiver in the repair shop in Tucson - I haven't been able to talk to them recently which has me somewhat concerned - but I'm really interested in something made for stowing away and quick setup. We have a stowaway telescope to take with us when we go camping and the two voyeuristic "activities" seem to complement each other very well.

The Kaito's are inexpensive, but the Grundig and Sony seem to have the best reputations followed closely by the Sangean line.

I know that SW broadcasting is way down and ham radio is diving in the face of the internet as well, but I still enjoy the SW experience.

Thanks,
fran

Inviting spirits to come calling is really not such a good idea, is it?

Bullwinkle: "Ennie Meenie, chili beanie, the spirits are about to speak!"

Rocky: "Are they friendly spirits?"

Bullwinkle: "Just Listen".

Then the commercials began. definitely evil spirits.

Hopefully a little levity will go a long way.

2239. Re: Loop Antennas / minijack works-clips don't / impedence??

Source record: 88552

RHF- I see that you recommended this for antenna coupling, back in 2003...

Would this be useful for connecting to the loop? Someone in another group mentioned wrapping insulated wire around the antenna itself about 10 or so times... Is the PVC piping you mention just for convenience-- or is the extra isolation needed? What diameter PVC pipe? (Since the antenna has a tuner, is there a point to doing the tuned version you mentioned?)

* HOME MADE: Tune-A-Stick Whip Coupler for External Shortwave Antenna.

1. One Piece of PVC Pipe about 8" to 12" long.

2. Wrap about 50 to 100 turns of 18 to 24 AWG Insulated Wire uniformally around the PVC Pipe.

3. Tape the Coil End Windings to secure them.

4. Strip away one inch of wire insulation to allow for ground and external antenna connections.

5. Position the radio's Whip Antenna to the Vertical (Up-Right) Do not Extend the Whip Antenna.

6. Place the The PVC Pipe over the Whip Antenna.

7. Connect the Ground to the bottom coil end wire and External SW Antenna to the top coil end wires.

This is the end of the construction of the simple version of the Tune-A-Stick Whip Coupler.

2245. strong echo on Voice of Croatia

Newsgroup: rec.radio.shortwave
Date: 2006-08-17 02:22:09 UTC
From: weatherall <weatherall.2cnzst@news.radiobanter.com>
Message-ID: <weatherall.2cnzst@news.radiobanter.com>
Source record: 88563

I tuned to 9925 khz at 0200 UTC (17 Aug 2006) to hear Voice of Croatia.
There was a very strong echo that I estimated at 100ms after the first
signal. Ignoring the echo, I would give the signal an SIO code of 333.
The echo was roughly the same volume as the original signal so it was
very difficult to understand.

I was using a Sony ICF SW7600GR receiver, and I'm in northern
California.

I would really suggest you read the FCC Office of Engineering and
technology bulletin on PART 15, it OET Bulletin 63
http://www.fcc.gov/Bureaus/Engineering_Technology/Documents/bulletins/oet63/oet63rev.pdf
expecially page 29 which states:

What is the relationship between "microvolts per meter" and Watts?

Watts are the units used to describe the amount of power generated by a
transmitter. Microvolts per meter (µV/m) are the units used to

describe the strength of an electric field created by the operation of a transmitter. A particular transmitter that generates a constant level of power (Watts) can produce electric fields of different strengths (μV/m) depending on, among other things, the type of transmission line and antenna
connected to it. Because it is the electric field that causes interference to authorized radio communications, and since a particular electric field strength does not directly correspond to a particular level of transmitter power, most of the Part 15 emission limits are specified in field strength.

So logically if you use a ineffecient antenna and Shitty coax then you can create a low enough field....I'm tell you right now, I Have a field strength meter that reads microvolts, and I check the field ever morning, at it's not at no 30 meters either, it's around 17.5 meters and the electrical field is 1,0000 uV ...So believe what the hell you want I check it every morning and it's 1,000 uV @17.5 meters and at 30 meters it's 0. I would also point out I come from a long line of electricians (my father, my grandfather and my great grandfather) and THEY will back me up.

No, first I intend to humiliate you completely, if you don't cease and desist your filthy net.KKKopping. Oh, and I don't mean "...I'm going to killfile you". Oh, no. No, the Golden Killfile is an alt.usenet.kooks award, which I will generously repeat below:

Golden Killfile

Given to the most killfile-worthy net.kooks on Usenet. This award recognizes exceptional killfilable merit; if you are unworthy enough to be ignored by everyone on the face of the earth, you are eligible for this award.

With any luck, you'll end up killfiled by half of usenet (or more, better yet), assuming you intend to keep on crying at people to "cease and desist." Note that this award requires people to vote on it, though.

OTOH, you _could_ try your hand at displaying to us the k00ks you have encountered in the rec.radio.* groups, but you seem to think people are expected to "play nice" on usenet. Please, allow me to disabuse you of that wild notion: That's only alt.cuddle, and the moderated froups. Flaming, laming, trolling, and even frogging are not TOS-able offences, and you _will_ be ignored by ISPs if you complain to them.

I got an interesting email message from Paul Hrivnak of Palstar. He said they're hoping...hoping...to have a newer version of of the R30C/CC at the 2007 Dayton show. He couldn't go into any real detail about the features they hope to add because that's still up in the air to some extent. Still, it'll be interesting to see what they come up with.

He also remarked that Palstar gets back about one of these receivers PER YEAR for repair. That's a pretty good track record!

> Thanks.

For the antenna to fit the definition of a dipole the two sides need to
be equal but for receiving they don't have to be equal. One side can be
longer than the other and work well. A small portable radio is not
designed to handle that large an antenna the size of 50 / 200 feet long
so you might try 25 / 50 foot long antenna.

Freeplay "Lifeline" Not a screamer, but it does work OK. AM/FM/SW 3-18 MHz in two bands. Rechargable batteries, crank generator, solar panel charger. Decent audio, but not Hi-Fi by any stretch. Right now, you can get one from Universal for $50, and they send you yours, and send one to a kid in Africa as well. Only place you can buy one for yourself at all.

I have had both radios, and prefer the Sony. I think the Sony is easier
to deal with on ssb and cw, and sync detection is a nice plus. I don't
do motorcycle portable, but I do popup camper portable, so my radio gets
used in rustic environments. The Sony seems a little sturdier with its
metal speaker grill. If I recall, the battery compartment cover is
detached on the Grundig, and thus easily lost. The Sony's is attached
to the case. One thing that bugs me on the Grundig is that it uses 6
batteries. The Sony takes 4. Easier to buy and charge in 4's than 6's.
I eventually gave my Grundig away. I now have 3 of the Sony's.

> Thanks.

DJ,

1 - For general Shortwave Radio Listening (SWL) across
the Shortwave Bands from 1.9 MHz to 30 MHz the basic
Random Wire {Single Long Wire} Antenna is an all around
good performer.

NOTE - My Favorite Random Wire Antenna is configured
as an Inverted "L" Antenna with with the Vertical-Up-Leg
at the Far-End and a remotely Located Ground Rod at
base of the Far-End of the Antenna; also using a Matching
Transformer (UnUn) between the Wire Antenna Element
and the Coax Cable feed-in-line and having the Coax Cable
run directly under the Horizontal Arm of the Antenna.

READ - About the "Low Noise" Antenna 'design concepts'
that were popularized -by- John Doty :
http://groups.google.com/group/rec.radio.shortwave/msg/9586383afa7727a9

http://groups.google.com/group/rec.radio.shortwave/msg/a438b087b5e89fee

http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5178
http://groups.google.com/group/rec.radio.shortwave/msg/43463ad863e5b075

http://groups.google.com/group/rec.radio.shortwave/msg/254620d18b66eeba

http://groups.google.com/group/rec.radio.shortwave/msg/103fe02cad4e5650

http://groups.google.com/group/rec.radio.shortwave/msg/87d35eeaa8425c14

http://groups.google.com/group/rec.radio.shortwave/msg/a57711375bb4d0bb

2 - However, since you have that Budwig Dipole Center
Insulator and about 250 Feet of "Space" to Hang a Wire
Antenna Element in . . .

Consider the Windom {Off-Center-Dipole} Antenna for
your Shortwave Radio Listening (SWL) needs.

Fran:
I own an SW7600GR and I really like it. I have handled a G4000A in a
store and I didn't like the feel of the keypad.

Here is a classic side-by-side radio review from radiointel.com, which
covers the YB400PE (earlier version of the G4000A), ATS-909, and
SW7600G (earlier version of the SW7600GR):

http://www.radiointel.com/portwars.htm

Some of the points mentioned in the review:
* SSB reception on the YB400PE is distorted
* SW7600G/SW7600GR features synchronous detection, which is a feature
that reduces signal fading
* SW7600G takes 4 AA batteries; YB400PE takes 6 AA batteries
* YB400PE supposedly is better for FM reception

The Eton E5 is another radio in that price class, and is one of the
newest products available. It is based on the electronics in the
Degen/Kaito 1103 but with a much better user interface. I have one of
these as well, and I really like it (for its size, audio quality, user
interface, shortwave sensitivity), but it seems to use up my
rechargeable batteries a lot quicker than the SW7600GR.

> 10 or so times... Is the PVC piping you mention just for convenience--
> or is the extra isolation needed? What diameter PVC pipe? (Since the
> antenna has a tuner, is there a point to doing the tuned version you
> mentioned?)
>

- -

* HOME MADE: Tune-A-Stick Whip Coupler
for External Shortwave Antenna.

1. One Piece of PVC Pipe about 8" to 12" long.

2. Wrap about 50 to 100 turns of 18 to 24 AWG
Insulated Wire uniformally around the PVC Pipe.

3. Tape the Coil End Windings to secure them.

4. Strip away one inch of wire insulation to allow
for ground and external antenna connections.

5. Position the radio's Whip Antenna to the Vertical
(Up-Right) Do not Extend the Whip Antenna.

6. Place the The PVC Pipe over the Whip Antenna.

7. Connect the Ground to the bottom coil end wire
and External SW Antenna to the top coil end wires.

This is the end of the construction of the simple
version of the Tune-A-Stick Whip Coupler.

- -

DANR,

1 - If you Wrap the Insulated Wire Directly on-to the
Whip Antenna : Then you have a Fixed {Permenant}
Installation on the one Radio.

2 - If you use a Coil Form {Tube} and wrap the Wire
around it : Then you have a Temporary {Slide-On
and Slide-Off} Installation.

IMHO - Most Shortwave Listener's (SWL) perfer the
greater utility of Method # 2 using the Coil Form -and-
The ability to Install and use it when you want -or-
The ability to Transfer it from Radio to Radio.

Glenn Hauser's DX Listening Digest
#05-155 September 4, 2005
http://www.dxing.com/dxr/dxld5155.htm
DRM RADIOS AND SERVICES PUBLICLY LAUNCHED AT IFA
Panasonic showcased an OEM DRM-capable car radio prototype.
- - - "The arrival of a range of consumer-priced, DRM-capable
products at IFA marks the European launch of DRM,"

Fears for new digital radio system
http://news.bbc.co.uk/2/hi/technology/3652202.stm
- - - warning, Warning. WARNING !
If Power Line Internet Transmission is introduced,
then International Broadcasting on Shortwave may
also be consigned to History due to the Interference
from Data Travelling over Mains Electricity Cables.

DRM - Live Broadcasts Schedule
http://www.drm.org/livebroadcast/livebroadcast.php
International, National and Local DRM Broadcasts
are underway in Markets Worldwide

Old News - A05 Schedule - DRM Transmissions
http://www.hfcc.org/data/A05drm.html

Very Old News - DRM Receivers and Equipment
http://www.drm.org/receiversequip/receiversequip.php#

The Bottom Line : Switching-Off Analogue FM and AM
Radios may take years and making millions of much-loved
Analogue Radio sets useless will no doubt be controversial.

They are using two transmitters in Germany, one in Wertachtal and one in Nauen.
The fact that they are not properly synched up is the cause of the 'echo'.

Ah, no. See the FAQ I just posted for AUK. Also, note that you and a
fair number of your compadres in the rec.radio groups are also eligible
for various awards and offices, due to your and their own k00ky
behaviour. Here's a link explaining what I mean by "k00ky" behaviour:

http://www.insurgent.org/~jhd/kookway.htm

Also, here's a quote from Teh Mighty Kali, our resident war goddess, to Linda Gore:

"The awards granted by alt.usenet.kooks are the official Usenet kook awards, Linda. They were not created for the purpose of devaluing acts of kindness. They were created, and are maintained, for the purpose of recognizing abusive posters. Your fellow nominees are liars, bigots, frauds, forgers, defamers, screed spammers, people who falsely accuse others of stalking when they themselves are the stalkers, etc. You get the picture. If you don't, return to the above link and read.

"Not just anyone can be nominated; there are standards that must be upheld. No one may be nominated for purposes of revenge or a joke. Not all nominations are accepted. There must be evidence of abuse."

In Mark's case, there is plenty of evidence to convict him of spamming. However, in your case, Wiseman's, and various others', you have repeatedly and incessantly displayed monumental levels of homophobia, racism, sexism, and general fuckwittedness. If he has been abusive, the rest of you have been monstrous. In fact, I think the rec.radio.* froups seem like a great little fixer-upper for the MEOW re-decorators...

re: overload

My longwire currently goes into a modified DX398 through an input that is
1000 ohm, high impedance. Will overload still be an issue?

<major snippage>

But you seem to have evaded the issue.

Again, aren't there any good people buried there? Why wouldn't a "good
spirit" follow you home?

Is all that RF voice chatter solely due to them bitching about the
vandalism? (this seems to be the case, as you said you heard -no- voices
in an un-vandalized cemetery). If they are so aggrieved by the
vandalism, why didn't they follow home the people who did the
vandalizing? Why are they bothering innocent bystanders who had nothing
to do with the vandalism?

Thanks.

I was asking if the tubing made a difference, so that I could TEST
using insulated wire directly on the antenna... and then get some
tubing once I see that the wrapping works and how many wraps are
needed.

>1 - If you Wrap the Insulated Wire Directly on-to the
>Whip Antenna : Then you have a Fixed {Permenant}
>Installation on the one Radio.

: expecially page 29 which states:
:
:
: What is the relationship between "microvolts per meter" and Watts?
:
: Watts are the units used to describe the amount of power generated by a
: transmitter. Microvolts per meter (ï¿½V/m) are the units used to
: describe the strength of an electric field created by the operation of
: a transmitter. A particular transmitter that generates a constant level
: of power (Watts) can produce electric fields of different strengths
: (ï¿½V/m) depending on, among other things, the type of transmission line
: and antenna
[snip]

Todd, there isn't a law you can quote which governs physics. You
can't repeal the law of gravity, and you can't logically state that
transmitter power and electric field strength are independent of one
another. Think about it: That idea doesn't even make sense.

: So logically if you use a ineffecient antenna and Shitty coax then you
: can create a low enough field....I'm tell you right now, I Have a field
: strength meter that reads microvolts, and I check the field ever
: morning, at it's not at no 30 meters either, it's around 17.5 meters

Do you know the difference between the far and near fields? Are you
aware that an ordinary field strength meter can give you wildly
incorrect results when it is placed in the near field of an antenna?
Most engineers would tell you that you have to be at least five
wavelengths away from the antenna (and preferably ten) before you are
out of the influence of the near field. At 33 MHz, the wavelength is
roughly nine meters; therefore, your meter is in the near field of the
antenna, and all bets are off.

: and the electrical field is 1,0000 uV ...So believe what the hell you
: want I check it every morning and it's 1,000 uV @17.5 meters and at 30
: meters it's 0. I would also point out I come from a long line of
: electricians (my father, my grandfather and my great grandfather) and
: THEY will back me up.

Sigh. That's what we need: Electricians who never even heard of free
space impedance.

2295. Tips and Tricks for Detecting Eavesdropping Devices

Newsgroup: rec.radio.shortwave
Date: 2006-08-17 13:19:42 UTC
From: TSCM Video <ctaylor@pinpoint-productions.com>
Message-ID: <1155820782.821609.291630@b28g2000cwb.googlegroups.com>
Source record: 88357

First of all, let me thank the many of you who have requested that we produce a "Tips and Tricks for Eavesdropping Detection" video similar to award winning issue awareness video, The Red Balloon about industrial espionage and eavesdropping (http://www.tscmvideo.com).

Then answer is yes and we are in the script development stage of what will probably be a two to four hour video. While I am relatively sure that we have covered most areas, I also accept that sometimes you can be too close to the tress to see the forest. What I need from the groups are ideas about what specifics you would like to see covered.

Also, we are going to press next week for the Spanish version of Telephone Eavesdropping and Detection, which is the textbook I used at the Texas A&M's Advanced Telephone Eavesdropping Detection 40 hour seminars. The book will cost the same prices as the English version, but will have a red cover. All 300 original technical illustrations have been converted to Spanish also. (http://www.tscmvideo.com/book-telephone-eavesdropping.html).

Since we do not have a Spanish website, we are currently looking for distributors/dealers in Latin America.

Thank you,

Charlie Taylor

> { And Does Anyone Really Care ? }

I personally find it astounding that anyone believes that DRM will do anything to help commercial HF broadcasting. It has no appeal for those, like me, who'd rather not see the HF bands destroyed. Nor will DRM appeal to the millions of "average Joe" consumers who'll view it as a perverse twist on an already puzzling medium.

DRM consortium says: "Take advantage of the world's only, open standard digital radio system for short-wave, AM/medium-wave and long-wave."

Consumers hear: "Come buy this special receiver that will allow you to hear all of those broadcasts that don't interest you--with digital quality audio!!"

Nevermind the dropped signals, of course.

My prediction: DRM won't be around long enough to ruin HF.

Space Weather News for August 17, 2006

http://spaceweather.com

AURORA WATCH: An explosion on the sun yesterday (Aug. 16) hurled a coronal mass ejection (CME) toward Earth. The approaching cloud could spark a geomagnetic storm when it arrives, probably on August 18th. Sky watchers should be alert for auroras.

If a storm erupts, the best displays will be at higher latitudes: e.g., Alaska, Canada, and Scandinavia. However, auroras could descend to lower latitudes, too, spreading across northern-tier US states from Maine to Washington and elsewhere.

Sometimes during a geomagnetic storm, the sky appears to be blank--no auroras. The display may be too faint to see with the unaided eye. Try using your camera: a 15+ second exposure can reveal colorful auroras just below the threshold of naked-eye visibility. An example of "photographic auroras" over Colorado may be found in our most recent aurora gallery:

http://www.spaceweather.com/aurora/gallery_01aug06.htm

Please visit http://spaceweather.com for pictures of the August 16th explosion and updates about the incoming CME.

2321. Daytime IBOC AM DX nugget

Newsgroup: rec.radio.shortwave
Date: 2006-08-17 18:20:40 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12e9crh7192aqbd@corp.supernews.com>
Source record: 88383

I was under the impression that the range of IBOC reception is much shorter than analog. I found the following comment interesting and contrary to others regarding distance reception of IBOC. This begs the question - can the night time AM IBOC DXing range, meaning understandable speech / ID's (i.e. no static, hiss or adjacent chan. interference.) be further than analog?

...
"One of the questions that recurs in HD Radio discussions is the usable range of the digital signal. What I found surprised me.

"WTMJ at 620 kHz in Milwaukee, about 100 miles north, has a readable signal over most of Chicago but there was substantial hiss and noise, especially on the south side of Chicago where I live. You know very well you are not listening to a local station.

"I played with the external loop that comes with the radio [Boston Acoustics Recepter] and was able to get enough signal for the Recepter to switch and lock onto digital. Now that was a heck of a contrast!

[I wonder how much better a Terk AM Advantage loop would have performed]

"I could not detect the reverb the station uses on the analog signal with all the noise, but on the digital it was perfectly clear, clean and the reverb was there, even though the analog signal was a lot less than optimum. So in this case, the digital signal provided reception in excess of the primary analog pattern.
...
Larry Langford is chief engineer and owner of WGTO(AM), Cassopolis, Mich. He worked for CBS, ABC, Westinghouse and independent stations in Chicago from 1966 to 2000.

Perhaps the "good people" are in a higher plane of existence and have no reason to stick around a lonely desolate cemetery? I'm only speaking from the tone of the voices I heard - the majority of them, that is. I did pick up the voice of an older lady saying "Walk after Jesus" and mentioning the Bible. But any positive spirits were definitely outnumbered.

> Is all that RF voice chatter solely due to them bitching about the

> to do with the vandalism?

They probably did, just as they did to people who visited my house during these experiments. Now one co-worker claims he has a ghost in his house and my relative things they followed me to her house as well. One thing's certain - ever since I boycotted EVP because of the vulgar language there aren't as many spirits hanging around I feel - which means they probably got bored due to the lack of my enthusiasm to communicate, and decided to harass other people who were more in tune with them.

Indeed, but how many sensitives do you know visit cemeteries to communicate with the dead? They have enough problems blocking them out of their bedroom. I was told by one sensitive that spirits know when a person is sensitive - like a flashlight beam in a darkened room - and they attach themselves around that person in hopes of communicating important messages. Many people have died with unresolved issues, and if there are such things as spirits and ghosts and free will, it would make sense that many would choose to stick around in this plane to either communicate or simply watch what is going on.

The next best thing to a sensitive would be someone with equipment to detect their presence. Obviously, with me going into that cemetery on countless occassions and pleading with them to communicate any way possible, and calling them by first name, I was taking an inviting approach and also promising them I would continue to communicate and help get their messages through. Perhaps I should've been more stern.

As far as denoiser software, it is only used to filter out the white noise and bring out nearly inaudible voices so the human ear can better understand them. Again, it works with inaudible human voices, and for whatever reason it also works for inaudible voices that are of an unknown origin, pointing to the fact that they are indeed voices, and if you would listen to just one of my recordings, you would definitely throw the "brain/pattern" theory out the window.

Forgive me for pointing it out, but your understanding of spirits
is pathetically crude. They are not physical beings, or energy
beings. They manifest and express themselves through the human
mind, which projects their expressions outward (so to speak) and
translates them into terms human consciousness is able to
comprehend. White noise provides a convenient matrix for them to
communicate, since the human mind is ever anxious to pick
recognizable patterns out of chaos. However, they are not able to
physically impress their voices on recording devices, since they
do not have voices, in any mechanical sense. For the same reason
they cannot be photographed, since they do not have physical bodies.

When spirits communicate, they often rely on the innate tendency
of the human mind to make sense out of chaos, to impose order on
disordered systems. It is easier for them to impress the human
mind with the illusion of a voice, for example, if there is a
background noise that encourages the false impression of a voice
or voices -- the sound of a motor, or rain falling, or even the
wind. Spirits do not actually have voices, but in order to
communicate clearly and explicitly they must express their
thoughts in a way that human minds are able to deal with -- in
words. They cannot form actual words, but they can trigger the
impression of words in the human mind, and this is easier with the
help of some background noise conducive to the impression of voices.

I'm considering 2 different shortwave receivers and would appreciate the benefit of your experience. I want to be able to copy SSB and CW as well as general radio, so that limits the market.

The 2 I'm considering are the Eton/Grundig 4000A and the Sony 7600GR. They appear to be pretty much equivalent in features. What would be your preference? Or is there something else that's better in the same portable/feature/price range?

Thanks,

In U.S.A.the main telephone lines are underground,the lines going to houses,stores,businesses are above ground.For instance,the telephone lines on my street are above ground up there with the electricity power lines,cable tv lines and which other lines that may be up there.At the end of my street up the hill from me,the above ground telephone line runs down the pole underground and it connects to the main underground telephone trunk lines.There is a manhole street cover there by the side of the street and once in a while I see one or two Bell South trucks parked there and Bell South people working on the telephone lines.

> >Installation on the one Radio.

DANR - Yes - The Tubing will make a difference.

Since the Insulated Wire will be closer to the Metal
of the Whip Antenna and therefore coupling to it more
effectively. You will find that few turns are required
with the Direct-Wrap. More Turns when the Tubing is
used 'in-between' the Wire and the Whip Antenna.

TIP # 1 - Instead of Tubing for your first attempt. Try a
few wraps of Paper taped around the Whip Antenna as
a Thin Core to make the Coupling Coil more easier to
Put-On or Take-Off as needed.

TIP # 2 - With the Tubing the Coil Assembly can be
positioned {move} In-and-Out on the Whip Antenna
so that the Coupling Effect between the Whip and
Coil can be varried {adjusted} for the best reception.

hope this helps - iane ~ RHF

DJ,

When you are hearing the same local AM Radio Stations
-or- sometimes FM Radio or TV Stations all across your
Radio Dial and on several Bands then you usually have
External Shortwave Antenna OverLoad; and need to Trim
(cut-back) the size of the Antenna Wire -or- Attenuate
the Antenna Signal coming into the Radio.

The classic sign of OverLoad is hearing local AM Radio
Stations at several spots in the Shortwave Bands.

Then again sometimes it ain't the External Shortwave Antenna :
It is the AM/FM Shortwave Radio that needs fixing or replacing.

DJ - More information is required.
How is the 1000 Ohm Input configured ?

READ - Portable AM/FM Shortwave Radio-to-Antenna
"GIZMOE" Connector Box
http://groups.google.com/group/rec.radio.shortwave/msg/121903626f5e6d70
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2070

http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/957
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/7

NOTE - Improved Circuit and Description :
+ Continuous "Ground Rail" 'tie-in' for All Components
+ Jack-Connector to 'match' the Antenna Lead-in.
+ High Voltage Discharge protection using Gas Discharge Tube
+ Low Voltage Surge protection using Front-to-Back Dual Diodes

+ Static Discharge protection using 10K Ohm Potentiometer
+ + RF Signal Attenuation using the same 10K Ohm Potentiometer
+ Not-in-Use protection using an Circuit "Open" Switch
+ Plug-Connector to 'match' the Radio's External Antenna Input.
http://groups.google.com/group/rec.radio.shortwave/msg/a0bfe14ab2ec6900

NOTE - If you use the NE-2 Lite-Bulb and on a 'normal day'
the Bulb is always Glowing or Blinking; then Trim your
Antenna by 25 Feet and check it again - repeat as needed.
http://groups.google.com/group/rec.radio.shortwave/msg/016995600a6e2edd

PROTECTING THE "PORTABLE" AM/FM SHORTWAVE RADIO
FROM THE ANTENNA :
If the Radio Listener has their 'portable' AM/FM Shortwave Radio
permanently connected to an Out-Side External Shortwave Antenna.
I recommend that they consider building and using a "GIZMO"
Connector Box between the Antenna and the Radio.

I took the info and suggestions and looked around a little more and a little more deeply and I've ordered the Sony.
Thanks.

"mcqz" <fmcq@cableone.net> wrote in message
news:12e7bcr8qeiva34@corp.supernews.com...
I'm considering 2 different shortwave receivers and would appreciate the benefit of your experience. I want to be able to copy SSB and CW as well as general radio, so that limits the market.

The 2 I'm considering are the Eton/Grundig 4000A and the Sony 7600GR. They appear to be pretty much equivalent in features. What would be your preference? Or is there something else that's better in the same portable/feature/price range?

Thanks,
Fran McHugh

Don't worry about it. Back in the day, my parents' baby monitor used
to pick up Radio Moscow.

I think you would be much better working in dreams, and it started
getting interesting when trying some underworld visualization
exercises.

e.g. R.J. Stewart: Power Within the Land: The Roots of Celtic and
Underworld Traditions Awakening the Sleepers and Regenerating the Earth
(Paperback)

Did you have a digital connection from the scanner to the recorder?
What were the voices saying? It may have been a radio play.

Also if you expect to hear something you often can convince yourself
that you do hear it. Like in music for hearing your name, e.g. Enter
Sandman, Metallica, "Hush little 'David'.." when the printed lyrics are
"Hush little Baby".

Possibly...what with the long, rambling "ransom" note that just "happened" to ask for *EXACTLY* the amount of money Mr. R received for his bonus.

In any event, you can take it to the bank that it *isn't* that pitiful fruit cake in Thailand.

You heard it here first!

>> Mickey D's or make beds at the Holiday Inn for $5/hr.
>
> Those jobs are HISTORY.

Yes, I agree, they are history---and that's the shame of it and that's
the point of this discussion.

YOU seem to think it's OK for this country
to lose $20/hr jobs and trade them for $5/hr jobs--I don't.

> Prices for goods are declining -

Well, thank goodness for that---otherwise we would be in trouble because
our SALARIES are declining too; and when we don't have any jobs at all
because they are all being done by Mr.Gupta or Mr. Wong, it won't make
any difference how much the price of goods decline.
:-(

>> So what's yer point? You apparently see Lenova as a good thing, I see it
>> as a bunch of IBM jobs out the window.

> Free market economics.

...but YOU TOTALLY MISS THE POINT!!!! We DO NOT physically live in a
place called the "free market"; we -live- in America and those were
American jobs that were lost!

>>> The
>>> Neo-Liberal Communists simply prey on the economic ignorance of the
> masses
>>> by repeating senseless propaganda.

>> Like you believing bush's propaganda that "outsourcing is good for this
>> country"?

> Come on bull-shiter, site some facts to back up your Neo-Liberal fascist
> propaganda.

First, it's "shitter", not shiter. And I (and ANY news media you care to
read)did back it up and it has nothing to do with your neo, liberal,
yadda, yadda, yadda buzz words.

WHOLE, *ENTIRE* *INDUSTRIES*, (auto, air line, tool and die, and
general manufacturing of all types-from bed pans to brake pads), not
just individual companies, *are* IN TROUBLE because of outsourcing.

NOT "propaganda", just a sad fact, Jack.

> Enjoy your retirement. It doesn't get much better than this!

For -me-, that is probably true.

For the people who have to take a 50%
pay cut or totally lose their jobs to Gupta or Wong because of
outsourcing, well, if you think "it doesn't get much better than this!"
for those people, you are indeed one sick doggie whose philosophy
appears to be "Let 'em eat cake".

Jeez...first it's "Obsessive Steve" with his 40 or 50 "BUSTED" posts and now you with your 20th "work on your moon bounce" post.

Step right up, folks...TWO obsessive-compulsives, no waiting.

As previously requested by others, lose the "Code", just "Slow" will be perfectly descriptive.

Point of origin or transmitter location?

Point of origin as far as I know is Moscow. And it just so happens that at the time and frequency you heard them the transmitter site is listed as Moscow.

They use relays in various locations in Russia and several other countries as well.

I don't recall offhand just how long its been operating.

Islamic? Hardly.I consider Islam to be a disease of the intellect,
Judaism is completely different, in that it has become a disease of the
Soul.

Confiscating harems?
They must need the income very badly...

http://www.gvnet.com/humantrafficking/Israel.htm
http://www.israelnewsagency.com/sexisrael69690531.html

==========
TEL AVIV - The Parliamentary Inquiry Committee has found that between
3,000 and 10,000 women are smuggled into Israel each year to be sold and
trafficked as sex slaves. Each woman is sold at public auction for
between 8 and 10 thousand USD and about 10,000 women are currently being
held in Israelï¿½s 3 to 4 hundred brothels.

http://us.altermedia.info/date/2005/03/
==========

A spiritual revolution would have a profound effect on the Jewish
homeland's future - Stripped of their Torah heritage by Israel's corrupt
and degenerate Bolshevik elite, "modern" Israeli Jews have turned in
increasing numbers to criminality and the empty and destructive
enticements of drinking, drugs, gambling, adultery and prostitution. (An
undercover video recently revealed young Russian emigres to Israel sold
as prostitutes into lives of white slavery in Tel Aviv's numerous brothels.)

I was wondering how to best hear my portable Sangean ATS 909 on a
cruise ship - lots of metal . . .
I have a long wire antenna that I can hook on my whip antenna and was
wondering if that would do.
Thanks

That's how they have lied all these years about the waivering process, they go to the courts saying one thing, then turn around and do another. Same thing here, they publish bulletins saying one thing and then go after people who's following the same rules, claiming something different.

If they want to complain about the station they can file the complaint here

http://www.fcc.gov/eb/sed/ulo.html
Complaints

Written complaints alleging violations of Section 301 of the Communications Act should be sent to the Federal Communications Commission, Enforcement Bureau, Spectrum Enforcement Division, 445 12th Street, SW, Washington, DC 20554. Complaints should include the name of the operator, if known, how the station identifies itself, the location of the station, the operating frequency, the type of station being operated, and whether the station's operation is causing interference.

For complaints involving unlicensed amateur radio operations, please click here.

For complaints involving unlicensed broadcast station operations, please click here.

But I will fight it ever step of the way, I would like them (the FCC) to explain to the judge why they didn't consider my Seven (7) broadcast applications and Waivers?? So all I ahve to tell stebie and his butt buddies go for it!!!

Yeah the R-5000 has great looks, a nice tuning knob, very good sensitivity and sound but that keypad is horrendous. That and the lack of a syncronous detector puts it behind the Drake.

Go up on deck with the wire attached and drape it over the side (if it isn't too long <s>). You probably won't need too much wire for a portable radio. Often times the receiver gets overdriven and the excess signal strength doesn't help. I'd be interested to see what you pick up if you kept a log .

Just WHAT IS * TEA-BAGGING * anyway ??

from: http://en.wikipedia.org/wiki/Teabagging

Teabagging is a slang term for the act of a man
placing his genitals, specifically the scrotum,
on the face, head, or in the mouth of another
person. Windmilling is striking someone in
the face with a penis (also known as a Fodunk,
a "Turkey Slap", a "Mushroom Stamp", and a "Love Slap").

As a sexual practice, "teabagging" refers to a man
dipping his testicles into the mouth of his partner
as a form of oral sex; thus his partner was "teabagged",
as the practice vaguely resembles dipping a
teabag in a cup of water. Sometimes teabagging
is taken to specifically mean the act of a male stripper
repeatedly tapping and grinding his testicles into
a patron's forehead. In this case the patron was "teabagged."

Teabagging first entered pop culture in John Waters' cult film
Pecker (as an act - the forehead variety of teabagging -
banned in a particular male strip club). Waters discovered
the practice at a Baltimore bar called the Atlantis. He also
claims it has since been superseded by the related act of
helicoptering, "where they whap-whap you in the face
with their hard-on" [1]. The term was more recently
described in detail in the DVD Extras of The Aristocrats
by Hank Azaria and also on the television series Sex and
the City and appeared again in the film Soul Plane, included
in a list of sexual acts and later defined. On the DVD of
the film Jay and Silent Bob Strike Back, Jay sings a song
which includes the line "teabag my balls" in one deleted scene.
It also appears in America (The Book) by the staff of
The Daily Show and has been referenced on the television
show by its host, Jon Stewart. It also appears as a kind
of teenage party hoax in the movie In My Father's Den and
in Brandon Vaughn's common acts of degradation DVD.
It is featured in the HBO series Curb Your Enthusiasm
(season 1, episode 3). It was described on an episode
of the television series Law and Order: Special Victims
Unit. Finally, on July 30th 2002, the term was used several
times on the air during a serious newscast when
Captain Janks made a crank call. Also referenced in a

dialog between David Cross and Michael Cera in an
episode of Arrested Development (Dec, 2005). It is also
used in the American version of Takeshi's Castle (MXC)
whenever the green suited sumo wrestler (named the
Green Teabagger) wins by sitting near the contestants face.
On the hit MTV show Newlyweds, Jessica Simpson,
Jessica and her Mom went out shopping and stumbled
upon a brand of clothes labeled "teabagging", they
then went on to discussing what they thought the term meant.

A variant known as a roman helmet or roman soldier
involves laying the penis along the person's nose while
placing the testicles on their eyes, somewhat resembling
the helmet of a Roman legionary. This can also be referred
to as a Gonziano in reference to the Muppet character
Gonzo, who has a long, phallic nose. "Roger's Profanisaurus"
also refers to this as the "Dutch blindfold". This practice,
widely known in high-school and fraternity party circles,
has become known as a "Famous Henry." In some areas
of the country, particularly Minnesota, this practice is
known as a "Cap'n Crunch," for the hat worn by the
iconic breakfast cereal mascot.

As practical joke Teabagging can also be practiced
as a practical joke. This is sometimes known as
cat-braining or Cock Slapping, after the appearance
of the scrotum; an alternate term is hanging brain, a term
also used as a level name in the computer game Marathon
Infinity. In its joking form, teabagging is attributed as a shaming
or a degradation of the victim. The practice is most
common among high school and college males. Teabagging
often occurs when these males are intoxicated with alcohol
and have a camera at hand. Afterwards, it is not uncommon
to see flyers, postings and e-mails of the victim, with a
scrotum across the forehead, in an attempt to socially
consummate the shaming aspect of this male ritual.
In addition to the well known and often used scrotum
on the forehead variation of teabagging there is also the
act of dipping one male's scrotum into the drink of
another unbeknownst to the victim. This too is most
frequently done while the males are intoxicated.
If time permits, multiple males dip their scrotums into one drink.
The act is only revealed to the drinker after the beverage has been
finished.

- END -

(Now..........don't y'all feel MUCH better ??)

It's not that the radio input won't be damaged by the excessive signal
levels but the term "overload" means the hight levels will cause the
radio to reproduce signals where they do not belong on the dial.

The last part of that explanation above sheds a whole new light on
ole ex-14.313 mHz's Dumbass Donnie's favorite radio buddy
and his peculiar and eccentric on the air habits from up in MN !

Gee. I miss listening to the kook from GA and his matching
8-Ball bookend from MN. Now all we gots left in BLB in OK
on 14.313 in the daytime and his buddies who all sound like
they are 3 steps away from the cemetary vault.....

Gotta enjoy these ham radio clowns folks, their bad health
habits (95% of em smoke, eat Big Mac's daily, don't exercize
etc...) and often advanced age means that they won't last long.
Which is also good news as their XYL's usually can't wait to
unload all their "ham radio junk" a week after they've been
planted, which means easy pickup and re-sale $$'s on E-Screw.

I just F-N love it all !!

"It's depressing, seeing a hot porn star
fucking some freaky-dicked old aqualung."
~ Rev. Otto

"You know a religion has no sense of humor,
when a guy can stand up and say, you know,
if you commit suicide for Allah,
after you die you will be met in heaven by 70 virgins'
and nobody in the room just goes,

Yes, I wish I could hear them on that frequency now. A few years ago, when I lived out West, I could hear them on 4890 and listened to them from time to time. Now that I'm on the East Coast, though, I haven't had much luck with them on that or any other frequency...even though I have a better setup on the whole. I'll keep trying over the next few days...

No, the FCC is about to levy a fine on you for talking to unlicensed
stations, Marqueer.

2436. Icom R75 receiver, Signal Strength Meter

Newsgroup: rec.radio.shortwave
Date: 2006-08-18 12:46:33 UTC
From: Jim <jrf@tullydeath.com>
Message-ID: <1155905193.393674.28220@p79g2000cwp.googlegroups.com>
Source record: 88798

I would like to add an analogue signal strength meter to my Icom R75 receiver. Has anyone managed to do this, and what's involved? I'm looking to take a 'real' indication of signal strength from the AGC line, not just monitoring the audio output.

Thanks

???

My R75 has an S meter. It appears to mimic a VU meter in the SSB mode
because there is only ''power'' during modulation , but shows signal
strength normally in the AM mode.

So how do you take yours?

2461. Re: Tune-A-Stick -and- Portable Wire Antenna (PWA) for Whip Antenna Couplers to External Shortwave Listener (SWL) Antennas

Newsgroup: rec.radio.shortwave
Date: 2006-08-18 16:22:28 UTC
From: danr_18@yahoo.com
Message-ID: <1155918148.802863.244620@i3g2000cwc.googlegroups.com>
Source record: 88823

Well, I went from 10 wraps, to about 40 wraps (of the same 22 gauge
insulated wire), directly around the antenna. I extended the bottom
(thick) part of the antenna, just enough to fit the wraps (-the wraps
are NOT spaced out). I then attached antenna and ground wires of the
loop to the ends of the wire wrapped around the antenna.

Well, off of the rod by itself, I can hear CHU Canada, but it's below 1
on the S-Meter. Using the inductive connection (40 wraps), it gives a
signal of 4 -- but it's VERY noisy.
(I tried reversing the antenna/ground to no avail).

With the antenna clip directly to the top (thin part) of the rod
antenna (rest of rod not extended), I get signal of 6 but very noisy.
When I connect the ground clip to the battery, it get's MUCH quieter
(than without ground, or with inductive connection) and it stays at a
signal of 6. Direct connection of the antenna to a radio with an
antenna jack is still much better!
(I did a test with the clips to that radio - in order to make sure it's
an antenna connection issue).

So, as of now, the inductive connection isn't helping. Suggestions or
recommendations?

I emailed Universal about the AA-1, to ask if it's ok to use with
active antennas (it's also $60...which is a bit much, considering).

Thanks

Same here - the S-meter on my R-75 appears to behave in near-perfect analogy to a mechanical/analogue S-meter, the only difference being that the electronic/digital meter doesn't get the finest gradations of signal strength variation. Otherwise, it leaves no doubt as to the accurate strength of the signal, irrespective of audio (audio strength plays no role in signal strength reading in AM - even if there is a silent carrier, the meter deflects; and on SSB, it deflects only when the audio is present, as it should).

Na&#65533;ve, foolish, ignorant of facts, unrealistically idealistic, dreamers, willfully in denial or deceptive. They hail from the ranks of the chronically unhappy, the anarchists, the aspiring revolutionaries, the neurotics who are at war with life, the disaffected alienated from government, corporations, and just about any and all institutions of society.

Derives satisfaction from being anti-establishment. He finds perverse gratification in aiding the forces that aim to dismantle an existing order, whatever it may be: an order he neither approves of nor he feels he belongs to.

He is conflicted and dishonest. He fails to look inside himself and discover the causes of his own problems and unhappiness while he readily enlists himself in causes that validate his distorted perception.

He is a master practitioner of scapegoating. He assigns blame to others while absolving himself of responsibility, has a long handy list of candidates for blaming anything and everything, and by living a distorted life, he contributes to the ills of society.

He may even engage in willful misinformation and deception when it suits him.

> > . .

DANR,

Seems like you have tried all the various combinations
and described your results fairly well.

Remember - Not everything words for everyboby.

Choose the one that works for you the best and stick with it.
- - - Until you try something better :o)

If increased 'noise' coming from the simple straight wire
Antenna is an issue. Then try a Horizontal [Flat] Loop
Antenna with either TV Twin Lead or Coax Cable as a
feed-in-line from the Antenna to the Radio.

READ - The Shortwave Listener's (SWL) "Random"
Horizontal [Flat] Loop Antenna
http://groups.google.com/group/rec.radio.shortwave/msg/c173213a11be0b83

READ - The In-the-Attic Horizontal [Flat] Loop Antenna
- - - Just may be the better choice to fill that . . .
empty space overhead {not in your head :o}.
http://groups.google.com/group/rec.radio.shortwave/msg/01f4e10e7df8249c

http://groups.google.com/group/rec.radio.shortwave/msg/8678920c10cb5cc9

Note - A simple Loop Antenna {Square / Triangle / Round}
with a 10 - 15 Foot Side or Diameter is really about a
40'-60' / 30'-45' / 31'-47' long piece of Wire; and that
is enough Wire-in-the-Air for most 'portable' AM/FM
Shortwave Radios.

something to think about - iane ~ RHF
.
.
. .

It'll be a nice one if the daggone sideband-selectable S-AM works as
advertised.

And I'm certain you'll pay a respectable price as well. My guesstimate of the price is $4500 (or more!).

They do this to prevent front end overload for users in high MW
signal areas. There are some areas of the Windy, for instance, that are
a veritible RF 'Little Big Horn' of huge signals (50 kw).
It's not a problem for many users, but when it's a problem, it's
usually a big problem.

Padding the MW band is a lot easier and a lot less expensive than
increasing the headroom to accomodate signals 100 times or more hotter
than the average DX signal.

Oh boy....now you guys want to compare Drakes, Icoms, Kenwoods etc to a
little portable made in China.

If a radio does everything its supposed to do at good performance to
low price ratio, should it not desrve a 4 or 5?, Or is it the price of
the radio that makes the ratings?

Should a Timex watch not get a 5 rating for working just about forever
for about $30?

But I know..... a Timex is not a good as a Rolex.

Back to Manchester,England,ahhgin.Last night before I cut the light to get my beauty sleep,I emailed that married Irish woman wayyyyyyy over yonder across the big pond.I asked her to tell me again about Manchester.

She said,Yes,I have been to Manchester before and it was an ugly old city,basically because Manchester is an industrial city and regeneration never really caught on there.That has all changed now and there are new buildings.Manchester was a contender for the Olympics.

In the 1980's they had the greatest house music in the whole UK.It was called Hacienda and is legendary for what they gave to the music scene.

(She just loves house and garage music,so she does)

Port Moresby is the Capital of Papua New Guinea.

It may interest you to know that Queen Elizabeth II is the Chief of State.

There are still quite a few shortwave stations operating in Papua New Guinea.

I don't have a lot of experience with radios on big metal ships. My
little Degen 1103 portable did a nice job on the big metal ferry boat
to Long Island. Actually got Ashtabula Bill out in Ohio
http://www.amwindow.org/audio/htm/w8vyz.htm on 75m at high noon. Point
is you should do good with just a whip if you're topside. The metal
should actually help to keep the noise inside. Don't forget to pack
your headphones.

> beings.

Considering that spirits have a consciousness and a soul (after all, we're not talking about wine spirits here) then there would have to be some sort of energy existing within that soul. How could a spirit reason, project its voice onto tape, manifest, or insert itself into a dream if it wasn't energy?

They manifest and express themselves through the human
> mind, which projects their expressions outward (so to speak) and

One theory behind EVP was that the voices were actually coming from the experimenter's mind. Experiments using conscious manipulation proved futile and there was no telepathic link from the mind to the recording. If you are talking about something else (through who's human mind - ours or theirs?)

> translates them into terms human consciousness is able to
> comprehend. White noise provides a convenient matrix for them to
> communicate, since the human mind is ever anxious to pick
> recognizable patterns out of chaos. However, they are not able to
> physically impress their voices on recording devices, since they
> do not have voices, in any mechanical sense.

You're referring to a physical voice? It's hard to define a voice since a voice isn't a physical object, but sound waves. Then you have voices travelling through radio waves which you can't detect unless you have an antenna and the proper gadgetry. According to EVP theory, there are two ways a spirit can communicate - telepathically and *through speaking* - we don't hear them because we can't see them, though sometimes people do hear voices and instantly dismiss them as an overactive imagination. Again, this goes more into the "how" - which if anyone easily knew the answer, then there would be no debate.

> they cannot be photographed, since they do not have physical bodies.

Images of the deceased (not including orbs or other white anamolies, but actual facial images) have shown up in photographs for centuries. Many were hoaxes, but many more cannot be proven a hoax. You can't dismiss *every* photograph because you believe they can't be photographed.

In fact, cameras pick up *many* things the human eye cannot, and stuff like different nanometers of light which we don't see aren't exactly physical.

Jeff

You're missing the point. The voice is not an illusion, but an actual auditory manifestation on tape. Whisper as loud as you can a brief phrase and you'll get an idea on how clear and imposing these voices are. It's one thing to just sit and listen to white noise, imagining voices or images (which I truly believe happens - imagination, just like seeing faces in smoke and clouds), but the whole idea of *recording* the white noise is to produce a tangible record of their existence. Most are too weak to be argued anything astronomically amazing, but some are so loud and clear that you *know* it's not the human mind playing tricks on you. Something or someone put that voice there, and it wasn't heard during the recording process, so if any theory makes more sense it would be the rectification theory since the mind cannot imagine a voice and suddenly have it appear on the recording. Afterall, the mind *does not hear* anything when the recording is going on - only afterwards.

> wind. Spirits do not actually have voices, but in order to

I see your point, but until you do a recording yourself and pick up a voice speaking your name or of some other relevance in a loud and clear manner then you really haven't understood EVP, because trust me - it'll leave you scratching your head and probably invoke a little fear for first-timers.

I believe that spirits evolve and grow and move up to higher dimensions over time. Life is a test, a learning lesson. Those who don't evolve spiritually can't enter higher dimensions because their vibratory rate is so low. I can see why these spirits hung around the cemetery to protect it, but unfortunately they sound exactly the same in death (accents, slang, etc.) as they did in person, and since they are still in this dimension then it's rather easy for *sensitive* electronic equipment to pick up their presence - IF they want to communicate.

The first time I went out there I only got one good EVP, which to this day was the strongest, loudest, and clearest one I ever recorded - it said "Bring him" in a man's voice after I tripped over a grave. I reversed it months later and the reversal says, just as clear, "Right here"...as in "Bring him right here" - of course if any of you listened to this recording, the majority would say it is a hoax and that only a living human could have made a voice that clear, but I wouldn't be here debating this if it was a hoax, and plus I don't see how someone could possible form a perfect "Right here" out of reversing the words "Bring him".

I'll try to remember to bring the recording next time I use this computer, since everything's at home stored on my computer.

After all, it's like a doctor diagnosing a disease without visiting with the patient. Until you actually listen to the voices you truly have no idea the clarity - and trust me, these voices aren't like people talking. They are downright creepy. The tone... they honestly sound like something out of a horror movie or ghost story.

Dave wrote:

> Did you have a digital connection from the scanner to the recorder?
> What were the voices saying? It may have been a radio play.

I recorded both through a stereo audio cord directly from the scanner to the recorder, and again in the room with the scanner playing in the background.

Two of the most disturbing voices, which happened weeks apart, said "I'm gonna strangle Gene" and "Gene," in one voice and "kill that n----". A guy named Gene just happened to visit the house the night before of the first recording and pointed out three spirits in the living room and later called them "weak" and "pathetic" because they couldn't make anything move.

But I'm going off on a tangent there ... I've recorded thousands of voices. Most of the times it sounds like one voice starts the sentence, and others finish it, or perhaps the voice is fluctuating in tone. But I think many are talking and finishing the sentences because they seem to be in unison. It's downright eerie.

Truly... if it was a radio play or *any* radio station, how could the same voices be talking about the same stuff no matter what time I record?

One evening I did feel a presence (I'm not sensitive) and got out the Bible and did a recording. The volume of the recording was 10 times higher than what it had been set at (recorder malfunction) yet the digital readout said it was the volume I originally set it at. There was yelling, threats, "Armaggeddon!", and all kinds of other stuff said by the same voices I heard initially in the cemetery - angry African-American spirits. Oddly enough, the recorder returned to normal after three recordings of their tirade. I've learned not to intimidate them with a Bible, though that may be a bad sign that they go crazy whenever I read from it and do a recording.

> Also if you expect to hear something you often can convince yourself
> that you do hear it. Like in music for hearing your name, e.g. Enter
> Sandman, Metallica, "Hush little 'David'.." when the printed lyrics are
> "Hush little Baby".

Hence you have Class B and C EVP recordings. But Class A recordings are generally agreed upon as saying a certain thing by nearly everyone who hear them. But you bring up a good point - many times when spirits talk you can't understand them and it takes many-a-listen to decipher what

they're saying. It's of the utmost importance to interpret the message correctly - because what good is communicating if you get the wrong message? That's when it becomes vital to communicate back to them and ask them what can be done to make their voices clearer. Usually they will respond with relevant information, but not always. But as to you're hearing anything at all - yes, there definitely are voices, and it has nothing to do with one's imagination. Once you examine the strongest evidence, you can only conclude that yes, indeed it's a voice, but where did it come from and why does it even sound like a dead person would?

I tend to agree - most of what is talked about on Coast to Coast is ridiculous. I may believe in EVP and ITC, but I have my limits, but I also don't put EVP and ITC in the same class as aliens, mind control conspiracies, and so on. EVP is a proven phenomenon which can be repeated consistently with results (but not always right away). And I believe EVP to be a valid scientific experiment - an ongoing one, since nobody has definitively come out to explain it away.

The Ham organizations in as many countries as possible should be notified, as a start. I hadn't heard of this newest harebrained scheme until I read about it here. There are probably countless others who are in a similar situation.

I will write a letter to the Canadian authorities and suggest other Canadians do the same thing.
http://www.crtc.gc.ca/eng/welcome.htm

Radio listeners/operators in other countries should do the same, as there are equivalent governing bodies on most, if not all Countries. Every letter received helps. Their attention has to be turned towards this impending disaster.

That is just a small start and as the information spreads, the politicians could be informed by a very large number of potential voters that the plan is obscene.

Would the ARRL in the US be a good start? Have they even said anything about this?

Slow Code wrote:

> Is BlueBerry Doggie imaginary?

Slow Code, your little friends are wrong. They have been affected by the skepticism of a skeptical age. They do not believe except [what] they see. They think that nothing can be which is not comprehensible by their little minds. All minds, Slow Code, whether they be men's or children's, are little. In this great universe of ours man is a mere insect, an ant, in his intellect, as compared with the boundless world about him, as measure by the intelligence capable of grasping the whole of truth and knowledge.

Yes, Slow Code, there is a Blueberry Doggie. He exists certainly as perversion and degeneracy and lust exist, and you know that they abound and give to your life its highest beauty and joy. Alas! How dreary would be the world if there were no Blueberry Doggie! It would be as dreary as if there were no Slow CodeS. There would be no pervlike faith then, no poetry, no romance to make tolerable this existence. We should have no enjoyment, except in sense and sight. The eternal light which smuthood fills the world would be extinguished.

Not believe in Blueberry Doggie! You might as well not believe in fairies! You might get your papa to hire men to watch in all the chimneys on Friday Night to catch Blueberry Doggie, but even if they did not see Blueberry Doggie coming down, what would that prove? Nobody sees Blueberry Doggie, but that is no sign that there is no Blueberry Doggie. The most real things in the world are those that neither children nor men can see. Did you ever see fairies dancing on cuhulin's lawn? Of course not, that was cuhulin.. but that's no proof that they are not there. Nobody can conceive or imagine all the blunders there are unseen and unseeable in the world.

You tear apart the dxAce head and see what makes the noise inside, but there is a veil covering the unseen world which not the strongest man, nor even the united strength of all the strongest man that ever lived, could tear apart. Only faith, fancy, poetry, love, romance and debauchery can push aside that curtain and view and picture the supernal beauty and glory beyond. Is it all real? Ah, Slow Code, in all this world there is nothing else real and abiding. No Blueberry Doggie! Thank Dog! He lives, and he lives forever. A thousand years from now, nay, ten times ten thousand years from now, he will continue to make gay and glad the heart of the bestialist cuhulin.

>

If you know what a soul is, then you are ahead of me and most of the philosophers of the past two thousand years. I cannot refute that spirits have souls because (a) I have no sense myself of what a soul is, and (b) I have no way of knowing what you mean by "soul."

Spirits are the same as us, except they do not usually have sustained control over bodies of flesh and blood. Are we energy? I put it to you that if we were stripped of all our flesh and bone, we could not be measured, any more than the essence (soul?) of a dead person can be measured after it "leaves" its corpse.

Similarly, spirits cannot be measured directly by machine, and therefore cannot be said to possess energy or be made of energy. What they can do is affect the human brain and nervous system, just as we can. Their control is (usually) not as extensive or as refined as our own. We learn to control our bodies from birth, whereas spirits only get a chance to drive a body of flesh during partial or complete possession (which is quite common, by the way).

While a spirit is controlling a body, partially or completely, it can affect that body, and can use that body to affect its environment. These effects can be measured and recorded, and have energy.

Point is, all things tangible and persistent about a spirit require a body of flesh. It is our memories that define our personalities, our very identities. Spirits outside flesh do not have memories. Hence they have no definite identities. They can develop identities only when they begin to interact with living minds encased in flesh. This interaction may be passive -- they may do no more than observe -- but the interaction allows them to acquire a sense of self.

> ours or theirs?)
>

It's simplistic to say that spirit voices come from the mind of the perceiver. The mind of a human being is used by a spirit to enable it to articulate itself. It does not speak, even though it may seem to speak -- it creates the illusion of a voice by manipulating the inner perceptions of the hearer.

The only way a spirit can speak is to possess its host, and then use the physical voice of that person to express itself in words. There is no such thing as a disembodied spirit voice, although there is often the very real perception of a disembodied spirit voice. Just as the image in a dream is not seen with the physical eyes, a disembodied spirit voice is not heard with the ears -- it only seems to be heard with the ears. The illusion is perfect. Often times a spirit voice cannot be distinguished from the voice of a physical speaker.

> anyone easily knew the answer, then there would be no debate.
>

Spirits do not rely on radio to speak. Rather, they rely on the white noise of static to supply a kind of textured background that allows them to more easily manipulate the auditory perceptions of the listener so that the listener gets the illusion of having heard spoken words. When I refer to white noise, I mean any chaotic background of an audible kind.

>> > they cannot be photographed, since they do not have physical bodies.

> photographed.
>

I can indeed dismiss all spirit photographs, because I know that spirits have no physical bodies of any kind. They are no more physical than the figures we see in our dreams. They cannot impress photographic film with an image. What they can do is convince suggestible individuals that vague shapes in photographs are spirit figures. They are able to modify perception so that what to one person would seem no more than a meaningless blur appears, to a susceptible person, the face of a spiritual being. It is all done in the mind. Spirits manipulate human minds, not the physical world.

> In fact, cameras pick up *many* things the human eye cannot, and stuff
> like different nanometers of light which we don't see aren't exactly
> physical.
>
> Jeff
>

Energy is physical. Matter and energy are, at root, one and the same. What is not physical is a pattern. A pattern requires a physical matrix, but it is independent of the matrix upon which it is based. Letters of the alphabet, for example, must be inscribed on something to be perceived, or at least imagined in the mind, but they are not a part of the base that supports their manifest forms. They are ideals in the Platonic sense. They exist apart from matter -- however, apart from matter their existence cannot be measured or recorded.

Or think of it this way. A spirit is like a piece of music. It is a pattern that requires physical media to express itself, but is not the physical media by which it is expressed. Music is not the sound -- the sound is only its vehicle. Similarly, spirits require human minds to express themselves, but they are not a part of human minds -- yet apart from human minds they lack form or identity. Their abstract nature becomes manifest when they are filtered through our brains. On their own, they don't have bodies, they don't have forms, they don't have voices. Exactly what they are is beyond our comprehension, since they are unlike everything we think we know. My belief is that they are beings of higher dimensions who are able to insert themselves into our awareness (what we think of as reality) via our minds. They put on forms, identities, voices, to interact with us, but they put them on as we would put on a suit of clothing.

However, it is a curious property of spirits that the identities they assume become truly their identities for them. Just as our identities over time become us. Spirits do not often lie about who they are -- they truly believe they are the poses them adopt in order to interact with human beings.

There is the question of poltergeist phenomena -- the possibility that a spirit can, in some unknown manner, use the energies of a human host to cause changes in the physical environment in nonstandard ways. I think this kind of event may occur, based on the recorded eye-witness evidence for it, but it is also possible that some other factor is at work (deception used by the possessed host; self-deception on the part of the witnesses).

If poltergeists exist, then it is not beyond possibility that spirits can use human energies to modify physical recording devices. I tend to believe this does not happen, but I would not dismiss the possibility out of hand.

Dead persons can't talk, so they don't sound like anything. If you mean spooky horror film voices, sometimes the cliche is the reality. Spirits do talk in weird ways. They shout, they curse, they growl, they whisper. Or so it seems to our awareness. My own theory is that part of the reason that both spirit voices and spirit faces are so often distorted is that spirits lack perfect control over our minds, and so they express themselves imperfectly. It's like trying to drive a car when you've never learned to drive. You go jerking and weaving all over the place. It takes practice. Maybe some spirits just never get the knack.

2551. Zenith B600 power cord and reel

Newsgroup: rec.radio.shortwave
Date: 2006-08-19 12:10:29 UTC

Greetings. I just picked up a very, very nice B600L. Yes, the leather one and it's in great shape in every way. I bought it as a restoration project, but it doesn't need much, mostly just a good cleaning, general checkup and alignment. Can't wait to see how it turns out; I think it will be a real beauty.

While I have it apart, I figure I'll replace the power cord. I'm sure I can figure it out, but is there anyone out there that has done this? Remember this is on a retractable reel, which currently works fine and I'd like to keep it that way. I have the schematics and alignment procedures, but not a general service manual that details how this assembly comes apart. Can anyone provide some guidance on replacing the power cord, or point me to a resource? Any tips would be appreciated, like "make sure you don't do such-and-such" or "be sure to do this before that".

Thanks.
Jeff

Ironically, his station's (1020) IBOC is broken.

If I listen to plain AM>SYNC (or plain AM) on the R8B there is no
noise, so apparently the HD sidebands are phase inverted from each
other. But I cannot use my SW2 in the synchonous mode at all on an HD
station, as you cannot listen to both sidebands at once.

Source record: 88787

The ["Israeli"] Parliamentary Inquiry Committee has found that between 3,000 and 10,000 women are smuggled into Israel each year to be sold and trafficked as sex slaves.

Most foreign prostitutes in Israel come from Ukraine, Moldova, Uzbekistan and Russia and many are smuggled in across the Egyptian border.

Why not post the original "Israeli" news sources, Mickey?
http://www.ynetnews.com/articles/0,7340,L-3060127,00.html
http://www.ynetnews.com/Ext/Comp/ArticleLayout/CdaArticlePrintPreview/1,2506,L-3062297,00.html

"The problems caused by the sex-trade are indeed horrendous and something must be done. But the underlying problem is the desperate economic situation in the home land of these abused women. A great-deal of evils has stemmed from the fallout caused by the collapse of the former Soviet Union but until the economic situation in these countries improves efforts to cure the negative social effects of the sex trade will prove dire indeed."

Your point Mickey, is that Islam-O-fascism is fighting against WHITE slavery in Israel? - ROTFLMAO!

Hezbollah

Drug trafficking is a major money maker for Hezbollah, "endorsed by a special fatwa by the mullahs." In addition to the production and trade of heroin in the Middle East and cocaine in and from South America, Hezbollah facilitates, for a fee, the trafficking of other drug smuggling networks. It cooperates, for example, with the Revolutionary Armed Forces of Colombia (FARC), the National Liberation Army (ELN) in Colombia and the "Abadan drug ring," a long-established Iranian drug network, allowing them to use the Hezbollah-controlled drug routes in Lebanon to transport heroin and opium from Iran and Afghanistan to Europe and North Africa. Hezbollah's other illegal resources include: money laundering, illegal arms trading and smuggling; counterfeiting and selling currency and goods; piracy of compact discs and DVDs; TRAFFICKING IN HUMANS (SEX SLAVES); conducting elaborate import-export schemes with traders from India and Hong Kong to Ivory Coast, Belgium, and South and Central America. Hezbollah also extorts "donations" from Shi'ite, especially Lebanese immigrants in South and North America under the threat of physical harm or death.
http://www.washtimes.com/op-ed/20060810-084245-5230r.htm

Columbia has a notorious human trafficking problem in which Hezbollah is heavily involved.

Lebanon [a.k.a. Hezbollah / Islam-0-fascists]

Lebanon is a destination country for the trafficking of Asians and Africans�primarily women�for domestic servitude, and possibly for Eastern European women trafficked for sexual exploitation. Women from Sri Lanka, Malaysia, Indonesia, the Philippines, Somalia, and Ethiopia [all have a large Muslim population] enter Lebanon legally, but often find themselves subjected to conditions of involuntary servitude as domestic servants. An undetermined number of the domestic servants suffer physical and sexual abuse, nonpayment of wages, and withholding of passports that confines them to the employer�s home. In 2005, the government and NGOs who work in this area reported less than 100 cases of abused foreign workers; experts, however, estimate that the true incidents of migrant worker abuse are considerably higher. Eastern European women come to Lebanon on "artiste" visas to work as adult entertainers, but may become victims of involuntary sexual servitude [those damn Jews in Lebanon must be in cahoots with Hezbollah - the Party of God - LOL].

...approximately 150,000-200,000 domestic migrant workers in Lebanon have become victims of human trafficking. Many persons from Asia or Africa, women mainly...

...these migrants are upon arrival in Lebanon deceived or forced into signing a second, markedly more disadvantageous contract that is DRAFTED IN ARABIC [Hezbollah must have it good in Lebanon...] , a language they do not understand. It is this second contract that is considered valid and binding by Lebanese authorities. 16 hour working days - seven days a week, and the withholding of wages are not uncommon. Some employers uphold such exploitative situations by locking domestic migrant workers in the house, confiscating their passports and depriving them of access to basic means of communication such as the telephone or mail. Physical abuse is also a problem. One survey brought to my attention found that at least one out of every three Lebanese [Hezbollah] employers beats his or her domestic worker. Some victims also personally related incidents of severe and traumatic sexual abuse...

Iran

...10-19 age group most afflicted by drug addiction in Iran. Buying heroin and opium is easier than buying bread or milk. Ayatollah Khamnei is a 50-year-long Opium addict.
http://www.iranpressnews.com/english/source/015164.html

Syria, Iraq, Egypt, Jordan, Saudi Arabia, Qatar and UAE

...about 40,000 Indonesians [primarily Muslim population] were estimated to be working illegally in Syria, Iraq and Egypt, three countries with which Indonesia has yet to sign bilateral agreements on employment. "The workers were smuggled to the three countries from neighboring countries, such as Jordan, Saudi Arabia, Qatar and UAE"

Saudi Arabia

allegations of abuse - especially in Saudi Arabia - of foreign workers continue, with the Indonesian, Sri Lankan and Philippine embassies handling

thousands of complaints every year. "It was like a bad dream," a migrant worker from the Philippines said of his experiences in Saudi Arabia, where the lives of migrant workers are further complicated by deeply rooted gender, religious, and racial discrimination.

The report looks at the country's criminal justice system through the eyes of families and friends of migrants, some of whom were allegedly arbitrary arrested and tortured, and sentenced to prison terms following faulty trials. Some were executed, it said. "We have no more tears, our tears have all dried up," a woman in a village in India was quoted as saying after her son was reportedly beheaded following a secret trial in Jeddah.

Why doesn't your Neo-Liberal Communist propaganda tell us about the Saudi Arabians overseas prostitution trips? Have you ever visited the Muslim section of Bangkok? Never heard about it? Of course you haven't. It's doesn't fit your Neo-Liberal Communist agenda.

Thai women seeking well-paid jobs in Bahrain and South Africa have been urged to exercise caution as they risk falling into the hands of human traffickers who will force them into prostitution.

China

The Peoples' Republic of China is a source, transit, and destination country for men, women, and children trafficked for the purposes of forced labor and sexual exploitation. A significant number of Chinese women and children are trafficked internally for forced marriage and forced labor. Chinese women are at times lured abroad with false promises of legitimate employment and then trafficked for commercial sexual exploitation to destinations throughout Asia, the Middle East, Africa, Europe, and North America, while Chinese men have been trafficked for forced labor to Europe, South America, and the Middle East. A large number of Chinese men and women are smuggled abroad at enormous personal financial cost and, upon arrival in the destination country, are subjected to commercial sexual exploitation or other forms of exploitative labor to repay their debts. They often face exploitative conditions that meet the definition of involuntary servitude. Women from Burma, North Korea, Russia, Vietnam, and Mongolia are trafficked to China for labor and commercial sexual exploitation and forced marriage.

http://www.humantrafficking.org/

Mexican illegals in U.S. ran brothels located in Travis County, Texas, and Oklahoma City, used women from Mexico as well as Central and South American countries to sell sexual acts...

"The organization recruits females ... and arranges for them to be smuggled into the United States. The aliens are held in indentured servitude and forced into prostitution."

http://www.wnd.com/news/article.asp?ARTICLE_ID=51360

Of course international agencies monitoring human trafficking are unable to collect data in such fascist countries as Iran, Syria, Yemen, Sudan,

N.Korea, Myanmar, Venezuela, to name a few.
Why don't you get your passport and visit these countries that are "taboo" for Islam-0-fascist and Neo-Liberal Communist propaganda, hmmm? - LMAO

Your propagandic ejaculate has been castrated and your Neo-Liberal Communist agenda exposed:

ZIONISM was SUPPORTED by the POLITICAL LEFT [before it was high-jacked] at various times both before and after Israel's formation, in part due to "sympathy for the Jews as an oppressed people" and in part due to the STRONG SOCIALIST roots of Labor Zionism.

The Palestinians have been gathering more sympathy lately as Israel has been MOVING AWAY FROM the limited SOCIALIST policies it had originally adopted [and as Islam-0-fascism high-jacked Palestine] . This has led to a loss of support for Zionism among the political left, especially in [SOCIALIST] Europe. http://en.wikipedia.org/wiki/Zionism

If it is not "Socialism", the prelude to Communism, than Left-wing Neo-Liberals/"Progressives"/Socialists/Islam-0-fascists/Communists will attack. It is that simple.

The Communist Chinese "strategic agent" was so close to Yasser Arafat that he was among the handful of aides and terrorist chiefs confined with him in two rooms of the residential apartment of the Palestinian leader's Ramallah headquarters when it was stormed and besieged by Israeli forces in April and May 2002.
http://washingtontimes.com/national/20060615-111752-3841r_page2.htm

How Communist China's secret deals are fuelling war
http://www.timesonline.co.uk/article/0,,6-2302757.html
http://www.frontpagemag.com/Articles/Printable.asp?ID=23749

The Chinese and the Russians do not want to fight a war with America, not openly and directly; they would get hurt too badly, no matter who "won," and they do not need to. They want a reasonably prosperous and productive America to sell stuff to, and buy stuff from, but they would be hugely pleased to see America cut down to size a bit, or a lot, an America that was a No. 3 Semi-Super Power, after China and Russia, or Russia and China, in either order, or maybe No. 4 after China, Russia, and the New Islamic Caliphate. They would like to see an America that is about as much a threat to anybody as the European Union is now, so the Chinese and Russians can run the global show as they see fit, ration the oil, and pocket the profits.

Thus, they are perfectly happy to sell weapons to Hezbollah, calculating that the Hezbos & Friends will do the dirty work for them, will maintain a generation of savagery all over the world (except in Russia and China), and that America will exhaust itself, its politics, its will and economy, trying to "control" and contain the savagery, but lacking the will and strategic vision to root out its roots, because that would cause way too many civilian casualties, and America cannot stomach the infliction of civilian casualties, or the destruction of nations, even if they are sponsors of terror. We're way too nice for all that. And so our "niceness" is turned

and weaponized against us. We have become too civilized to defeat our enemies, perhaps too civilized to survive. The dagger of our decency stabs us in the back.

I'm not a fan of wide bandwidth receivers as the design usually favors the higher end communication bands and scanning functions.

Looks like they paid more attention to the front end then normal with RF relay switching and (relatively) large toroid coils instead of smaller chip inductors that can more easily saturate. Although the toroids are self shielding they look a little to close together on that BPF board for my tastes and causes me to wonder if enough attention was paid to isolating the sections. I'd need a closer view of the board and layout to know what was up with it.

The relays are a better RF solution than switching diodes but the unit will be making clicking sounds when you scan across bands and wear the relays out so I expect that the operating manual will advise against doing that.

At 70 watts whether it is on or off means it will run hot. The case looks like it is meant to travel and sit on a desk but you may want it to be in a rack with cooling. To get a feel about this imagine placing a 70 watt bulb inside the case. The receivers I have take 30 to 40 watts and are ballpark around the same size so for the ICOM to stay as cool it will all depend on that fan in the back, which will collect dust over time.

With the USB and ethernat ports on the back means it could be controled with National Instruments software instead of generating computer control software from scratch. ICOM may even have a driver written for it.

Nice looking unit and display. Looks like it belongs on a lab bench.

He is a Troll.

> If a radio does everything its supposed to do at good performance to
> low price ratio, should it not desrve a 4 or 5?, Or is it the price of
> the radio that makes the ratings?

No. A normal expectation would be for an item to work as advertised as a
minimum requirement for purchase. The rating compares an item to its
competitors based on price or in other words is a value comparison. In
order to make a logical comparison then requires that you place an item
in a cost category.

> Should a Timex watch not get a 5 rating for working just about forever
> for about $30?

But it will not forever.

> But I know..... a Timex is not a good as a Rolex.

What does "as good" mean? The Timex will not last as long but as long as
it is working may be just as accurate as the rolex.

Yes, but what about addressing those points above?

Therefore I will take this as another evasion.

Again a digital version of an analog function has no additional inherent
value over analog but it could. An example here would be a low and peak
temporary hold display. Normal would be green, max would be red and blue
min signal colors. The red and blue would last a second or two so the
green level indication could respond quickly to enhance the display.

The radio input is a differential mode input. This means it see a signal relative to its internal ground. Most local noise is common mode so an antenna setup that picks it up and presents it to the radio input causes the radio to respond to it without a ground connection. Connecting an antenna to just the antenna terminal causes any received station by the antenna to look the same as any local noise it also picks up since both are presented to the radio as a signal to ground. Connecting an antenna to the radio antenna terminal and ground causes the received station to appear differentially across the radio input so the radio responds to it and the common mode locally picked up noise is the same on the antenna and ground terminal so it is rejected as a common mode signal.

Radio Nigeria putting in an excellent signal here this afternoon on 15120 at 1950.

I hadn't tuned them in for some time and it would seem that they've fixed their previously muddy audio, though still seems to have a bit of hum.

The spacing looks tight, but this is the kind of thing that is easily
tested on a network analyzer in the design phase, so I suspect it is
not significant, and of course, any problems would have shown up in the
end to end testing of the radio.

PNG and Indo reception from the Pacific NW is usually best from mid-summer, and then declines as winter approaches. This seems to be the pattern year after year for some reason. My best reception of long-gone Radio Enga 2410 kHz has always been in the summer, for instance.

jeff, you seem to say that the voice is actually a recorded waveform on your recording medium, and not an imagined meaning in your own mind. if this is so then it takes physical forces to impose order on the random hash present. even if the energy output is very miniscule it still takes a physical force to even manipulate electrons into some kind of recognisable data. not to mention the intelligent knowledge of various recording methods and media needed to affect the successful transfer of communication. a different recording method would be useful to help sort this out. i propose this.... a box. a sealed closed box with a glass top. a tube could be inserted to introduce one single puff of talc, or baking flower or fingerprint dust or even cigarette smoke. if there are spooks and they are able to manipulate forces or circumstances that can have any effect on your recorder, then to control the movement and distribution of this dust should be easy. as it falls, it could display written words, or images just as before. after all this is just a very primitive form of recording. it only requires some form of control over the tiny particles, similar to magnetizing a signal on the tiny magnetic particles of recording tape but requiring less energy and less knowledge on the part of the spook. if no unusual patterns are evident in our "primitive" recording then i propose that the images imposed on the sophisticated recordings are suspect. i am sure that many other methods of recording could be thought up. maybe an etch-a-sketch screen? powdered iron on a sheet of paper? stir up something into water to see how it settles out? any of these should be easily influenced compared to the electronic recorder.

I like the SDR-1000's digital meter (in dBm), as the averaging function (rate) can be adjusted to the user's liking, or turned off. The peak hold and normal display colors (in gradient color hues) can be changed, too, for best visibility. There is also a really cool "analog" representation of an s-meter as an option, that displays in true s-units and incorporates the peak hold feature. The "needle" changes color briefly at the peak reading. It's a high-resolution and realistic representation of an S-meter, and floats in a separate window so you can place it on the Windows desktop wherever you like. Finally, because the SDR-1000 is user-calibrated with a Elecraft XG-1 or other signal meter, the digital meter and the "analog" s-meter are highly accurate across their range. My SDR-1000 blog entry from April 13th shows this S-meter in its prior form, before it was changed to a "floating" window.

Jet engine noise still there.

AM sync is not the specifications on the web page, which is a copy of
the last page (4) of the brochure but there is a paragraph about it on
the brochure page 3 upper right. Since it is implemented in DSP I would
expect that it is sideband selectable but that is an assumption on my
part. The specification page missing S-AM must be an oversight.

Analog or digital dBm is certainly more useful that s units.

You can program any kind of display you like on the computer supported
radios.

I would not want the averaging on at all preferring that the display
update as fast as possible so that the rate of signal fluctuation can
be seen in real time. The drawback is that with rapidly changing signal
you would have a tough time seeing the min and max and that is where
the min and max hold for a second or two with the different colors
would display. I've seen this type of display on audio VU metering and
I think it would be good for signal strength indicator.

The paragraph says it's sideband selectable, does it not?

"In addition, upper or lower side for S-AM demodulation is selectable for
eliminating interference from adjacent strong signals."

It could be that the 'sweet spot' here an hour or so after (and before) sunrise works out better for me in the winter than it might for you as the PNG's generally s/off at least by 1300 which would be well before your sunrise in winter?

Yes, the last sentence does. I should have re-read it before posting.
Anyway since the sync is in DSP it would be expected to have this
functionality.

Your QSL's indicate that they were around solar maximum and we are now
at solar minimum. Think that might make a difference?

It might, but I don't really know offhand. I'd almost expect the low bands to be better at solar minimum.

My memory fails me at the same time my back is giving out!

The JRC NRD-545's S meter can show a signal's "max peak" reading, where the highest reading signal "bar" remains lit for a second or two after the signal strength starts to fall. Meanwhile, the actual strength of the signal can still be seen at any given moment, as the S-meter continues to function as usual. It's just that the one bar showing the peak reading remains lit. I really liked that feature of the 545 (I now have a Ten-Tec RX340).

I never understood the DBm scale, which my RX340 has in addition to the usual S unit scale.
Can one of you radio eggheads explain exactly what "DBm" measures? I think it means decibels per meter, but that still tells me nothing. Is it "meter" as in wavelength?

The only thing I can say for sure about DX'ing PNG's and Indo's (or most anything else, for that matter) is when propagation is possible then you'd best listen EVERY day, elsewise you'll miss that once in a season opening when the station you want to hear is reported by everyone else and YOU decided to sleep in!

Take a good look at the picture of Michael C. Ruppert and note the flags flying in the square behind him.
http://www.fromthewilderness.com/free/ww3/081606_burning_bridge.shtml

Michael C. Ruppert quotes:

'I never thought I would call the 60s and 70s "the good old days". I would cry tears of joy today to see just one campus overrun by a modern equivalent of the Students for a Democratic Society.'

All about Students for a Democratic Society
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6723

...
"As the great Cynthia McKinney said to me not long before her just-orchestrated ouster from the House of Representatives..."

All about Cynthia McKinney
http://www.discoverthenetwork.com/individualProfile.asp?indid=1508

...
"I have said time and again that the only thing that matters to me is effecting real change in the political landscape. Revolution is not a dinner party. The economy and government of the United States of America are my enemies and the enemies of the entire human race and even of the American people themselves. They must be weakened, defeated and replaced by something which places the welfare of human beings ahead of profits and share value."

- Long live Mao Tsedung!!!

So where did this psycho-maniac BOZO move to? If you took a good look at that flag -
http://www.classbrain.com/art_cr/publish/venezuela_flag.shtml

VENEZUELA - to join his Communist Comrades Hugo Chavez and his Cuban buddy Castro.

This deserves a re-post:

Quite correct, dxAce. Typical 1300 UTC s/off of the PNGs is over 2-1/2 hours prior to our sunrise around December 1st. This is far from any local sunrise enhancement.

We'll sometimes see a brief sunset-at-the-transmitter enhancement, though, around 0830 UTC. In the summer, with a West Beverage antenna at the coast, we'll get hets or weak audio from the PNGs starting up as early as 0715 when conditions are good.

Yes, I'm glad you mentioned that sunset-at-the-transmitter enhancement which can be quite interesting! I haven't stayed up that late nor have I gotten up that early in quite a while. Fun to park on the frequency and hear them rise right out of the muck for a bit then fade away again.

Wish I still had all my issues of 'Proceedings' so I could peruse all the great propagation articles again!

I imagine they were hauling the explosives for use on the levees in New Orleans,
getting ready for a convenient hurricane to hit. :-)

You might hear some unusual medium wave (MW) DX on a ship, as MW signals propogate far over water. But then again, all the appliances and machinery on a ship may generate so much electronic hash at MW frequencies that reception will be awful, I dunno.

Hopefully it's in minus units as it refers to decibels above a
milliWatt.

I went on a cruise and took my Sony 7600. I went far forward from the bridge and clipped the 15 feet wire spool that comes with the Sony to a rigging. That gave me about 15 feet of vert.

I got fabulous reception, with no QRM to speak of. (This was an Alaska cruise.)

I used my GPS to log location while DX. Not a single person hassled me.

Have fun.

Steve.

Fabulous QSL's there dxAce = well done.
Telemon may well have a point about the solar maximum.
During the 1989/90 solar peak I had the best reception of really exotic
stations that have never been repeated.
Stations like Nandi, Kiribati, Cambridge Bay and others came in regularly
plus many other wonderful stations, never to be heard again in later years.
The solar peaks in later years produced nothing like that marvellous 1989/90
season.
I've read up a lot about propagation, but have never seen it explained why
that 89/90 season was so good and better than the rest.

Totalitarian governments of any type are an abomination forced on the
human spirit. A death camp is a death camp, no matter who is running it.

Mind you, some of them are easier to get around in at night..all the
chemical flashlights shoved up the prisoner's asses light the way quite
nicely.

Thanks. Milliwatts makes sense. I must have been thinking of millivolts
per meter, which I think is how broadcast station signal coverage areas
are measured. Or maybe it's microvolts per meter.

Oh, No! Not another Republican Gov't Receiver! Where are the real
shortwave receivers that the public can use like the DRM/AM type?? The
FCC will NOT approve this for the the general public (us SWL's) to use
it will not be approved but only for the rest of the world and maybe
other governments might not approve it ethier even the UK. If it was
a portable no problem. or something smaller that does not cover VHF/UHF
(microwave) frequencies. We are hoping that it will be cell-blocked
to become legal to use.

Best Regards, 73!

dxAce Joined the U.S.Navy and he knows real Radios,he owns several Drake Radios.I say dxAce is A OK in my book.

My old buddy was in the U.S.Navy,four years Active Duty on the USS Ticonderoga,he retired out of the U.S.Navy after about thirty something years.I sort of know (via emails) a Ham Radio guy in Mesquite,Texas (East side of Dallas) who was in the U.S.Navy in Asia in World War Two.There is an elderly guy who lives down the street from me.He was in the U.S.Army,149th Signal Company in Europe in World War Two.

What is your problem about Americans who stand up and do their Duty? I just recently read on the internet about a forty one year old lady at Fort Jackson,South Carolina (I have been to Fort Jackson,South Carolina before,two weeks holding,waiting on boot camp at Fort Gordon,Georgia) who Joined the U.S.Army.She has more GUTS than you will ever have!

Cell blocking isn't going to have much importance for much longer. From what
I have recently heard on the news, cell companies are trying to dump all
analog service within the next few months.

He was referring to the "Proceedings of Fine Tuning", a series of annual & bi-annual books for the intermediate to advanced DX/SWL enthusiast. It was named "Proceedings" as it was patterned after the academic publications of universities, technical societies, etc.

I was one of the editors of Proceedings from 1989-1996, but sadly Fine Tuning's DX newsletter is no longer. Proceedings specialized in very in-depth reviews and articles, written by expert DX hobby volunteers. The articles were much longer and more detailed than the typical monthly hobby bulletin piece. The Proceedings effort began in 1998 under the direction of top-notch DXer John Bryant.

We arranged with the NASWA and ODXA clubs to offer article reprints from Proceedings, but only ODXA continues to offer the entire collection of articles. Check out their reprint list at http://www.odxa.on.ca/reprints.pdf

We've talked about offering the entire series of Proceedings books on a CDROM sometime.

It's interesting that these new high-end receivers are still coming out.
What's the market, government? I guess shortwave is not dead.

Greg

Another receiver for the FCC and our City, State, Military to use for their needs and for Clearchannel, NAB and FCC to hunt down lots of unknown pirate stations, and Ipod transmitters and shut down left and right. that we cannot get cause the publicly available cannot receive too well and even you try to use a good antenna you still get noise and intermod cause of the receiver design. I appreciate the ad thanks. But I need something that will be cell blocked so can own one when I get the money. Also are you planning on owning one?

When I get my engineering degree I may have to get a FCC RF Commerical
License to use the equipment, but we will not be listening to boring
cell phone conversations mostly for Shortwave Broadcast Professional
DXing also for antenna designing and testing and yes deep down pirate
hunting on 6955 and FM broadcast frequencies.

Thanks for deep information DX Ace

Telemon, Do you work for the FCC or the government. The messege is
clear
this receiver is not for the "general" public to use only government
use only or for export. If that was ok, they would allowed the R
9000 to be owned by many hobbyists and obtain more QSLs and get the
rarest DX catches. The FCC is republican cause of their very very
high strict ordinances we have to follow and also knocking down good SW
pirate stations left and right and top and bottom, main reason why
there is no fun to listen to SW pirate radio activity on 6955 kHz and
6950 kHz except 6.220 but thats from Europe not the US but is not on
all the time to log down. The FCC and other parts of the government
uses these receivers to track pirates and part 15 radio stations down
and issue them the most biggest fines that we cannot shell out not even
to pay our bills.. Even clearchannel and big corporate NAB
communications companies that don't encourage pirate radio/ part 15
broadcasting shuts them down too with these receivers and periodic-log
antennas. The FCC does not encourage DXing only local radio listening
and HDTV and IBOC. Sorry! Thats good that ICOM are Democrats, but
the problem they are making receivers for the Republican Government
instead they should make receivers like the SW 8 and other small
receivers for the hobbyist public to use and have fun listening like
the Grundig Sat 800.

I hate to say but digital is living like a virus, if you don't like it
you need to complain
to the companies such as Biequity and NAB. You're not the only one
that does
not like DRM I like it just analog.

I don't want to augue, I just wanted to let you know that its just a
future equipment plan
for big companies. Getting a wideband receiver is going to be hard
than it was before.

Best Regards,

Professional DXing? I must admit I've made a buck or two 'DXing' from time to time but I'm
not certain if there are very many Professional DXing jobs out there these days.

I do not recall seeing a communications receiver in a radio station for decades. If we have a local pirate, we use a field strength meter or just a car radio to track it. Then we call the FCC to act.

> The FCC does not encourage DXing only local radio listening
> and HDTV and IBOC.

The FCC has encouraged localism in radio for nearly 60 years. This is why there is no high power AM or FM in the US.

> I hate to say but digital is living like a virus, if you don't like it
> you need to complain
> to the companies such as Biequity and NAB.

NAB is not a company. It is a trade association. It's biggest group of members is the single owner smaller market station.

Like many people I work for a defense contractor.

> The messege is clear this receiver is not for the "general" public to
> use only government use only or for export. If that was ok, they

I expect that the receiver does not block the cell phone frequencies and
the government is serious about privacy. The receiver would have to
block the cell frequencies, pass UL safety, and home EMI/RFI FCC
standards. ICOM just has to spend the money to pass the standards that
any home electronics device needs to pass to be sold to the general
public. This is an ICOM decision not the government.

You can buy receivers the government uses right now like the Ten-Tec
RX340.

> The FCC is republican cause of their very very high strict ordinances

The FCC is lobbied by the commercial radio industry. Maybe we should form a SWL group and hire a lobbyist to represent us. Are you will to shell out the bucks for this to get low power community radio?

I can tell you I am for regulation as anarchy on the bands is good for no one.

> The FCC does not encourage DXing only local radio listening and HDTV

I was joking about ICOM people being Democrats. I expect that most of the employees are in Japan and that the radios are assembled there but that is just a guess as their contact list does not specify which locations are manufacturing and which are sales. ICOM has sales offices in the USA and other countries.

> I hate to say but digital is living like a virus, if you don't like

> You're not the only one that does not like DRM I like it just analog.

Digitization is an applied paradigm of today's science where everything is looked at in quantitative way. Engineering is applied science and when an analog widget is redesigned with digital technology it can be improved in some way but sometimes it is no better. It depends on the engineering for the redesign to be an actual improvement.

> I don't want to augue, I just wanted to let you know that its just a
> future equipment plan for big companies. Getting a wideband receiver
> is going to be hard than it was before.

< Snip >

I don't know where you are located but I am not aware of any new restrictions on wide band receivers other than the afore mentioned cellular bands. Other countries have additional restrictions on frequencies that you can listen to in the USA.

I had an FCC guy stop up here in the mid 80's working on a powerline interference complaint driving a station wagon with some antenna stuff hidden in a specially designed stealth cover on the top. Had a bunch of receiving equipment installed on the passenger side. The HF receiver, believe it or not, was an FRG-7700.

renopithicus?

Sounds like someone might have been in there at 1950 but unsure. I think he's in Illinois so might be just a bit to close in for me on that freq.

I can hear the 'HI' beacon out of Connecticut on 13558.

2709. Transatlantic MW targets

Newsgroup: rec.radio.shortwave
Date: 2006-08-20 22:50:37 UTC
From: Steve <sdaniel13@speakeasy.net>
Message-ID: <1156114237.624569.217780@i42g2000cwa.googlegroups.com>
Source record: 89021

I'm no seasoned MW DXer by any means, but I've been having a lot of fun lately with my Quantum QX loop. And I'm curious: are there any transatlantic MW targets that I could reasonably expect to hear using the loop alone, without attaching a longwire to it? I'm on the East Coast. I haven't made any transatlantic "catches" yet, but there's always been unusually bad atmospheric noise when I've tried.

Mark, Just ignore them.

They only tease you because of the stupid things you say when you
follow up. Just ignore them and they'll give up.

Stop giving them reasons to tease you. It only makes you look
more stupid.

Take a break from the radio groups for a while, Maybe work on your
moon bounce some more.

I'm in need of a front face for a Realistic DX-160, the dial on mine is cracked, if anyone is parting one, please contact me. I would also consider a non-working or semi-working whole DX-160 as long as the front is in decent shape.
Please email me with details at gi1pi@yahoo.com

Thanks, Gil

I'm sure you're right. Although, I have heard people report an
occasional stroke of luck using the Kiwa loop, given favorable
conditions of course. Since the Quantum is reputed to be comparable to
the Kiwa, I just wonder how much "luck" it would take. I guess there's
no way to find out except by trying....I might have to take it to one
of the more remote beaches on Long Island or something.

It is not that hard, since most European and northern African stations are on non-used channels in the US. Since Europe uses 9 kHz separation, there are all kinds of stations that can be heard, even in metro areas on loops, as long as you have a reasonably selective receiver that has the ability to count in 1 kHz increments.

Over the last few decades, despite congestion of US channels, Europeans have been easily heard all over the eastern US.

Although it was years ago, in Cleveland 935 from Morocco was heard nearly every night, especially during Ramadan when it ran 24/7... this on an HQ 180 with an air core loop. The NRC or IRCA club pages may help, but this is very doable.

>

- The radio input is a differential mode input. This means
- it see a signal relative to its internal ground.

- Most local noise is common mode so an antenna setup
- that picks it up and presents it to the radio input causes
- the radio to respond to it without a ground connection.

- Connecting an antenna to just the antenna terminal causes
- any received station by the antenna to look the same as any
- local noise it also picks up since both are presented to the
- radio as a signal to ground.

- Connecting an antenna to the radio antenna terminal and
- ground causes the received station to appear differentially
- across the radio input so the radio responds to it and the
- common mode locally picked up noise is the same on the
- antenna and ground terminal so it is rejected as a common
- mode signal.
-

> Ventura, California

El Telo Mundo - Translation Please ! ~ RHF

Is simply connecting an Antenna to the Radio's Whip
Antenna or Antenna Terminal :
- - - Good -or- Band for Reception ?

Is simply connecting a Ground to the Radio :
- - - Good -or- Band for Reception ?

Will doing both make Radio Listening Beter : Yes -or- No ?

I don't think it's as easy as it used to be, because many more U.S. domestic stations that used to be required to sign off at sunset are now allowed to operate all night. But as David E. says it's hardly impossible, especially if you're near the coast.

I've generally found the longwave Europeans easier to log. If your Quantum works down there, try 252 (Ireland), and 198 (U.K.).

Within the mediumwave band proper, the only two stations I've identified here in the Nashville area are the U.K. simulcast on 1053 and 1098. (I heard both on the same night) Croatia on 1134 has been pretty loud, if I spoke Serbo-Croat I'd probably have it IDd<grin>. Norway on 1314 (or was it 1413?) used to be a big signal but that one has gone off the air permanently. 1521 in Saudi Arabia is also reported a lot, but it has a nightly silent period (Saudi time) so isn't around until late night U.S. time. You'll do a lot better on the coast; I'm some 600 miles inland & it hurts a LOT for transAtlantic DXing.

What you hear will depend considerably on exactly where you are and what frequenies your strong locals are on.

Bill, I would like to join, My main hobbies are mostly pirate
radio DXing, shortwave broadcast DXing, All longwave DXing from 150 to
519 kHz hopefully move down further to 10 kHz to 519 kHz if I can ever
get a new VLF converter kit. If you join my group you will see some
updated accomplishments in my longwave radio broadcast DXing. These
small mp3 clips in the files section are made by my DX-398 and YB-400PE
using a
MD recorder. Also there are others interested in longwave there as
well. I have been
DXing SW/LW/MW(AM)/ since 1987 and got more serious into it since 1992
using a
PH-405 boombox, now I have another vintage radio called the GF-9500
thats like the
PH-405 Fisher radio. I have been listening to shortwave for a long
time and also have
outdoor antennas. Bill, I am very interested in joining with you.
Wish you the best
in your DXing.

Steve,

Doug is absolutely correct when he says " What you hear will depend considerably on exactly where you are and what frequenies your strong locals are on."

I was one of the co-authors of the high tech DX article you referenced, and it's very true that a RF-quiet, seaside location is the best by far. The sea gain enhancement on MW frequencies can only be found within a few miles of a salt water boundary...better yet, within a few hundred yards of the ocean.

However, with perseverence you can hear DX inland. My home is in the suburban Seattle-Tacoma area, and I hear Asian DX occasionally, and DU (Aussie and Kiwi) stations less frequently. I am 100+ miles inland, and over a mountain range, from Asian signals.

This morning wasn't particularly good propagation on MW, but I still had audio from HLAZ in Cheju, South Korea on 1566, and RFO Tahiti 738. I had 15 or 20 peaks on other split frequencies showing on the spectrum scope of my SDR-1000, but they weren't strong enough for audio.

The autumn of 2004 was particularly good from home for trans-Pacific MW DX, with memorable catches such as RTM-Sarawak Malaysia, numerous Japanese and Chinese stations, and a Russian or two.

The bottom of the solar cycle is the best for MW DX, so hopefully this coming season will be very good.

73,

Guy Atkins

The other way around I could give advice, as I am living in the
Netherlands.

On my website are a lot of recordings transatlantic recordings from a
DX pedition to Sheigra Scotland http://home.hetnet.nl/~hanhardonk/

But also in my home I heard a lot of transatlantic radio stations..
Ilive in a small village.I use a Wellbrook ALA 1530. A very good
mediumwave antenna

Greetings han her Netherlands.

Check out the FCC regs.
"Sec. 15.225 Operation within the band 13.110-14.010 MHz.

(a) The field strength of any emissions within the band 13.553-
13.567 MHz shall not exceed 15,848 microvolts/meter at 30 meters.

(b) Within the bands 13.410-13.553 MHz and 13.567-13.710 MHz, the
field strength of any emissions shall not exceed 334
microvolts/meter at
30 meters.

(c) Within the bands 13.110-13.410 MHz and 13.710-14.010 MHz the
field strength of any emissions shall not exceed 106
microvolts/meter at

30 meters. "

My ISM/HiFer beacon has been copied from over 100 miles away.
And it is not running anywhre near the legal limit. At max if is
adjusted
for a S2 reading on a R2000 about 1 mile from the ISM "intentional
emitter".
I am running AM so SSB should carry much further.

Terry

Han ''her Netherlands''? Back in the 1960's there was a music group (if you aren't from the old South,you probally dont know what I am talking about) and I remember the first two lines of two of their songs.

Oh,I Lobster,then I Flounder.Another one is,I held her but,she got into the Train.
I am not too sure if I remember the exact titles of those old songs from the 1970's and who sang them crazy songs.I sure would like to find them on a CD or whatever,somewhere.

A brief audio clip for anyone who's interested:

http://www.supload.com/sound_confirm.php?get=248336011.wav

I believe their transmitter is in Issoudun, France. Not sure how much power they transmit with, though. My sense is that their English language broadcast has been beefed up significantly over the past several months...perhaps because of the situation in the Middle East? There've been periods when I could almost never catch them in English. For the last couple of weeks, though, it's seemed much easier.

Notice how the announcer says "Voice of Africa from the Great
Jamahiriyah". I think this is a reference to "Great Jamahiriyah Radio",
which is the name of a Libyan news service.

I'll shut up now.

Steve

You savage beast talk big now, but wait until the H-bombs begin
exploding in this country.

You'll be a million times more frightened than you were on 911, but it
will be all over for us. The White man is not capable of building
ethical and moral societies. all they know is to destroy.

Sadly for REAL peace loving Americans, we are going to be incinerated
along with the rest of the rabid beasts that are constantly supporting
our attacking and killing innocent people who aren't bothering us.

The sun has definitely set on the United Snakes of Amerikkka.

If Amerikkka really wanted to save lives, they would have dropped them
on Germany. That's where most of our soldiers died; not Japan.

They wanted to test out the bombs, and millions of funny looking
Yellow people were the perfect targets.

The White man is going to have hell to pay

when he comes before me on judgment day!

His is a typical Republican Ultra-conservative dullard, paranoid,
illogical, rabid way of reasoning.

Our leaders think like that don't you know?

Three airplanes with 21 hijackers on them, 17 from Saudi Arabia, and 4
from Egypt, strike the USA killing 3,000 people, and our leader goes
after Iraq, Afghanistan, Syria, and Iran.

These types of savages are good for having as beer drinking companions
every now and then, but they certainly shouldn't be allowed anywhere
near our government.

Now we are getting close to the truth. That's the same TWISTED, mad dog, logic whites used when they hung, boiled, whipped, shot, stomped, raped, mutilated, the beautiful African Americans who were violently forced to work for free for over two hundred years building this country into the richest country on the globe.

REPARATIONS!! REPARATIONS!! REPARATIONS!!
WWW.REPARATIONSTHECURE.ORG
Send all WHITE SUPREMACISTS back to the North pole from whence they came. There everything will be whites as they so desperately want. :-)

Listen carefully world. Any nonwhite person, or country who believes that "white" people truly like them has deceived themselves to the point where nothing they think to be true is.

I'm speaking of Middle Eastern, Far Eastern, and African people White folks will use you to get what they want, but they secretly plot your destruction. All you have to do is watch your television news to understand that fact! So be prepared.

It's not a question of IF...Amerikkka is coming to destroy you and your families, but rather WHEN!

If you are bullied into giving up the means to protect your country and your family, by the ONLY Nation that has actually used Nuclear weapons to destroy civilians, than you deserve what you get.

Good! Then you can use that to pay back all the money that was squandered on you with those silly social programs that still haven't seemed
to work.

After that, if you've anthing left, Native Americans will require that as 'rent'.

You might want to consider returning to Africa, but last I heard those folks really don't want you back.

Best of luck to ya!

Thanks for the reply Steve.
We'll be taking a GPS too. Good idea about marking our location. I'll
take along some wire with a few clips too and see if I can get some
"vert".
PS We are going far South - Antartica in December!

I live in North England, and I listen to US and Canadian staions
quite often. A few years back, when conditions were better, CJON
(Newfoundland) was as loud as a local station some nights.

>But also in my home I heard a lot of transatlantic radio stations..
>Ilive in a small village.I use a Wellbrook ALA 1530. A very good
>mediumwave antenna

I usually use an old Trio R1000 and a short whip antenna outside.
The R1000 is rigged so the 2.4KHz SSB filter is available in AM mode,
it makes all the difference, but for difficult stations I use SSB,
tuning to zero-beat with the carrier. If things get _really_ difficult
I also have a Racal RA-1792 and a selection of better antennas :-)

I'm rather new to DX-ing and Short Wave. Mostly I enjoy listening to AM-band US and Canada radio stations.
I'll be traveling to Antartica in late December and am looking for help with DX-ing Short Wave radio stations while I am in the Southern Hemisphere.
I'll be traveling to Buenos Aries, South America in December (I'll only be there 24 hours) and then I'll be leaving for Usuira (sp?) and then will be taking an ice breaker over the Drake Sea to the Antarctic Peninsula over New Years. When I'm not taking in the scenery or taking pictures, I'd like to listen for radio stations.
Any suggestions for SW and AM targets the South Atlantic? I hope to pick up some traffic from the Antarctic continent. I'll be taking my portable Sangean World Band ATS
909 which I can scan European as well as standard frequencies. I can attach an external antenna if needed.
Thanks.
John, Minneapolis, MN

2794. Pirate logging - the Crystal Ship

Newsgroup: rec.radio.shortwave
Date: 2006-08-21 20:00:27 UTC
From: Will <wgmartin99@yahoo.com>
Message-ID: <1156190427.162265.53810@h48g2000cwc.googlegroups.com>
Source record: 88906

Hi!

I heard the "Crystal Ship" pirate station last night for a relatively extended period. I was inspired by hearing another logging of it reported by Chris Lobdell on DXing with Cumbre -- I was listening to their transmission from WHRA on 5850 kHz in the 0230-0300 UT Monday 8/21/06 timeframe, in which he reported a logging of TCS on 6876 kHz. So, as that program ended, I tuned over to 6876 and there it was!

Logging details: Tune-in at 0255 UT Monday 8/21/06 on 6876 kHz. Kept listening to the station until it appeared to terminate the transmission at 0400 UT. Relatively weak signal here in St. Louis, MO, but I was only using the whip antenna on a Grundig Satellit 800 or a short stub of a wire antenna (I lost my outdoor random wire antenna during the storm here July 19th, and am waiting for cooler weather to re-install a replacement). Signal averaged S2 with frequent fades. Seemed to be clearer on the voice announcements than on the music.

IDs as "The Crystal Ship" & "Voice of the Blue States Republic" heard at 0256, 0315, 0334, & 0345 UT. An ID and the addresses for reception reports given at 0357 UT but the fading made it impossible to reliably copy the details; I confirmed the e-mail address from a listing in Monitoring Times. Program contents were a mix of music and politically-oriented talk, with a parody poem read at 0329 UT.

Wanted to say that I really appreciate their transmitting during this timeframe. This is the prime time of day that I listen to shortwave -- late evening and overnight. It seems that the vast majority of pirates/free radio people transmit earlier in the day, and I never think to tune the pirate frequencies then, or there are too many competing things keeping me from doing it then. So to have a chance to hear pirates after 0200 UT and especially after 0300 UT is welcomed.

Regards,
Will Martin
St. Louis, MO

(OT) : News Flash - "M II" Posts Something Positive About Canada !

Mike - "Canadian English"
http://en.wikipedia.org/wiki/Canadian_English
Thank You for posting something positive about Canada.
- - - Regional Accents of English Speakers
http://en.wikipedia.org/wiki/Regional_accents_of_English_speakers

Here is something also unique about Canada
"Canadian French"
http://en.wikipedia.org/wiki/Canadian_French
- - - Quebec French
http://en.wikipedia.org/wiki/Quebec_French
- - - Acadian French
http://en.wikipedia.org/wiki/Acadian_French

Meanwhile in the USA {The Good Old South} we
have "Cajun French" - Thanks in part to Canada.
http://en.wikipedia.org/wiki/Cajun_French

A Sad Time in Canadian History "Le Grand Dérangement"
http://en.wikipedia.org/wiki/Great_Upheaval- Ethnic
The Great Upheaval (le Grand Dérangement), also known
as the Great Expulsion. The Deportation or the Acadian
Expulsion, was the Forced Population Transfer at Gun
Point or "Ethnic Cleansing" of the Acadian {French}
Population from Nova Scotia between 1755 and 1763.
- - - Ethnic Cleansing Canaidian Style
http://en.wikipedia.org/wiki/Ethnic_cleansing

and now you know the rest of the story ~ RHF
Writing to you in American English (AmE)
http://en.wikipedia.org/wiki/American_english
ENGLISH - Rhotic and Non-Rhotic Accents
http://en.wikipedia.org/wiki/Rhotic_and_non-rhotic_accents
Then again there is African American Vernacular English (AAVE)
Ebonics =>

RAE Argentina also gets my vote for best theme music.

Voice of Turkey for best interval signal.

Source record: 88914

...what would you want it to be? We've been asked about it and are giving it some thought.

There's so much technical stuff on the mainstream media anymore that the 'Spectrum' concept of 10+ years ago is moot. If we decided to do a 'Spectrum'-like prgoram again, what would you want to hear?

We like the idea of the casual chat segment and the phone calls. That part's easy. But with no staff (and no money!) how do we go about getting the "technical" information that once made us unique and special? And what do we do that would distinguish us from the other programs out there?

Marty and I are kicking it around and could use your suggestions. Should we even bother?

Stan

2803. Re: What Happened to Grundig?

The YB-400 was a Chinese creation with the Grundig name. It was a good radio given what it cost. I still have mine and I often take it with me when I travel.

That said, there were many who thought the quality control left something to be desired. I have not had problems, but apparently others did. I don't know what became of this "Grundig" name use arrangement. I'm not surprised that it's no longer sold this way.

Not true, absolutely. Never heard of QRP? Low power stations can go a LONG
ways, not just interSTATE but interCONTINENTAL on HF frequencies. 100mW
kiddie walkie talkies have been heard 2/3 of the way across the country (the
old 11m CB ones) during peaks in the skip season on 11m.
```

Accually 13 MHz is one of them on 13.556.00 the field emission has to
be 15,848 uV/m @ 30 meters,,,read the rules

Todd
OMEGA ONE RADIO
13.665.00 MHz

Again steve, it's not Wattage the FCC is looking at under part 15, it's voltage and you can produce different wattage at one voltage. I'm running 100 watts but at 30 meters my voltage is 333uV. If one votage say 110 volts puts out one wattage, then why do we have an assortment of wattage of light bulbs?? but hey steve, if you think I'm Illegal, bitch to the FCC, if not shut the HELL UP!!!!

OMEGA ONE RADIO
13.556.00 MHz
100 watts of power!!!

Sure. Once upon a time (1993-2004ish) there was a program on WWCR called 'Spectrum', subtitled 'The World's Communications and Technology Magazine Program.' Each week the program would start with some news and features such as news about the broadcast radio industry such as format and call sign changes, some computer features, a hamfest calendar, etc. Then there was a period of general BS by the hosts to add a dash of personality. The crux of the show was originally an interview segment with the guest of the week talking about a variety of radio / technology topics. We talked about everything from tube manufacture, FCC enforccement, satellites, and LPFM to code / no-code debates, flying cars and time travel. We'd take phone calls and folks could ask the guests questions. Sometimes we would have a Q&A where listeners would ask questions and the hosts and other callers would provide answers. In this regard we have been compared to 'Car Talk' for technology.

There may be a few former listeners in the group who can share their experiences, but that's the genreal idea.

As time went on, and more and more technology information came along on the web and "regular" news channels. the show became less focused partly due to a lack of staff. We were all volunteers and we all had "real" lives. As much as CR wanted the show to stay on the air, we just couldn't keep it going.

Looking at it with a fresh eye, we're wondering if we couldn't bring it back in some form. Hope that helps.

Stan

All those times America got attacked when Bill Clintoon was President and
he didn't do anything about it. That's when they started it.

The world is like a plugged toilet and President Bush is making sure the
turds go down. Don't defend the turds or you may end up following them
down.

Markie, Just ignore them.

They only tease you because of the stupid things you say when you
follow up. Just ignore them and they'll give up.

Stop giving them reasons to tease you. It only makes you look
more stupid.

Take a break from the radio groups for a while, Maybe work on your
moon bounce some more or clean up your yard.

Some old time ham in the area needs to step in and show the scouts how ham radio and CW can save lives and help communities in emergencies.

Nickle Generals & Extra's have a hard time promoting amateur radio. All they want to do is promote dumbing it down more. It's no wonder the scouts aren't interested.

Why's that?? the voltage at 30 meters at my station is well below
15,848 uV. What steve and the others don't understand is you CAN
product different wattage at a certain voltage, if not we wouldn't 60
to 100 watt light bulbs that screw into 110 V

um...dumbass, you can product different wattage at a certain voltage,
if not we would have 60 to 100 WATT light bulbs plugged into 110 V, if
110V on put out on form of watt. Learn something about electricity.

The FCC changed that rule last year...some sites don't have the new
rules posted. The voltage now is 15,848 uV/m @ 30 meters

The FCC is looking at VOLTAGE, not WATTAGE, voltage can produce
different types of voltage...again if this is not so, then why do we
have an assortment of light bulbs that range from 60 watts to 100 watts
when you plug them into 110 V??

CORRECTION:

The FCC is looking at VOLTAGE, not WATTAGE, voltage can produce
different types of WATTAGE...again if this is not so, then why do we

have an assortment of light bulbs that range from 60 watts to 100
watts
when you plug them into 110 V??

I stopped off at O'Reily auto parts store.Wal Mart and Autozone doesn't carry them anymore,O'Reily just happened to have one package of 19 inch slip in refill windshield wiper blades.I got me an idear.Since I dont ever get out and drive anywhere if it's raining. (because I dont have to anymore) I think I will keep them refill blades in the package in the metal lock box behind the drivers seat in my raggity old 1978 Dodge van.Maybe I will remove the passenger side blade assembly.They ought to last forever that way.Them d..n things are getting hard to find nowdays.

When are you leaving the group to go do that, "Slow?"

Oh, and while you're at it, why don't you inform the group
the date when amateur radio morse code saved ANYONE's life?
Betcha can't do it...

On 7 July 2006 the FCC released its Independent Panel report
on the worst natural disaster to hit the USA, Hurricane
Katrina. You can find it in the Federal Register of that
date. In there you can find an objective report on how much
radio amateurs helped their communities.

BTW, Comments on that Report are due on or before 21 August
2006...today. Have you sent in your Comment, "Slow?" No?

>Nickle Generals & Extra's have a hard time promoting amateur radio. All
>they want to do is promote dumbing it down more.

Tsk, if anyone was doing "dumbing it down more," they'd have
to outdo your own retrograde, freeze-it-in-YOUR-youth ham
radio, "Slow." Feel proud. You are practically a one-ham
show on dumbing down the service...

>It's no wonder the scouts aren't interested.

Tsk, you should have recited your own tale of saving the
Titanic...when you were asleep on the US California...

HF conditions at my location are poor tonight, as they have been for at least the last week. So, I decided to spend some time with the Quantum Loop. On 790 khz, buried beneath a bunch of commercial stations, I'm hearing a time signal. On the minute there's some morse...an 'R' and something else that I haven't quite made out yet.

Anyone know what this is?

Steve

Wrong. FCC gonna shut your dumbass down for sure.

they are looking at microvolts per meter, which is "field strength", not
voltage, numb nuts.

What does it say? I am too cheap to get HBO on my DirecTV.BUT,since
those two divorced wimmin moved out next door about three months ago and
they do have DirecTV over there and they do have HBO over there,I could
take one of my smaller tv sets over there and hook it up and watch some
HBO while I use their clothes washing machine.

This is probably Radio Rebelde in Cuba. It's sort of a news/talk
station, with the time signal every minute. They also say "Radio
Rebelde" every minute.

I hear it every night here in Florida. It's on a couple other
frequencies also.

why would you need to watch it to knwo the content

somehow white peopl aimed the hrurricane at teh black sections of town
where the leves were weak (due cuportion that has been an old story in
NO for years) and then neglected the vics becuase they were just blacks
that should eb the RD abribed verion of the show

Sorry, it's Radio Reloj, not Radio Rebelde. See

http://www.hard-core-dx.com/archive/irca/msg10200.html

for some details. It's a pretty good catch in NY.

I hear this and 860 every night.

I will pay top dollars to anyone who has one or a commission for any referrals to someone who leads me to one. Looking for one in excellent

condition. I have most top Sony SW radios, and this one is missing in my collection.

Thanks again

Ivan

QRP is often my favourite mode of operation - it's quite a challenge. I've found it's frequently possible to talk across the Atlantic with 5 Watts p-e-p SSS on 14 MHz!

Bob

For a second there I thought you might be in Florida, i.e. close to
Cuba. But now I get it. Because it is Morse code, you are decoding it
in the presence of many broadcast stations.

um...dumbass, you are talking about power density (watts per square
meter) versus field strength (volts per meter) and that has nothing to
do with light bulbs...dumbass. You sound like electrician who knows
diddly squat about r.f. but think that he does. I waiting for your NAL
to arrive so Mark and I can throw a beer enema party.

Get help.

It's all interrelated. 100 watts into a 1 ohm load would put out a very
limited electrical field. (and for a very short time) I'm not sure, but I
think this is what he was trying to say: That a given voltage, the power
will change based upon changes in resistance (impedance). Of course the type
and length of antenna also figures into this equation. I guarantee you I can
run 100 watts into a tuned stub coax cable and still be well within the Part
15 specs.
```

Poor Toad, he cuts and pastes and sticks a few of his own comments and
tries to pass the whole thing off as his own writings.

> product different wattage at a certain voltage, if not we wouldn't 60
> to 100 watt light bulbs that screw into 110 V

Usually, Toad, you stick your litttle unused penis into those light
bulb sockets, don't you?

For you talking to unlicened stations, Morkie!

2882. Lightning damage

Newsgroup: rec.radio.shortwave
Date: 2006-08-22 11:04:35 UTC
From: r2000swler@hotmail.com
Message-ID: <1156244675.141738.193010@p79g2000cwp.googlegroups.com>
Source record: 88994

My micropower ISM/HiFer "beacon" got fried Sudnay morning by lightning.
We had late 4rth of July fireworks show at 6:30AM and I found out
Monday
about the damage. The friend's house where I had my unit operating
expereinced
several direct hits. There was damage to his both of his ~100' Oak
trees,
every electronic item in the house was toast. Most incandescent light
bulbs
were blown. The trees will have to come down.

He said the first bolt hit one tree and about 5 minutes alter a second
bolt
hit the other tree. A third bolt hit the power pole/line feeding his
home and
the power transformer exploded. It sounds like he had a fun morning.

My unit did not get a driect hit, no burnt parts, but every fuse was
silver
plated and ever semiconductor was shorted. The PIC that controlled the
unit was the only part visibly damaged and it had a hairline crack. The
Rio
MPP-300 display shows some segments but it won't play anything.

The 13.560000MHz crystal survived so I might build a simple CW unit.

I am lucky that it survived a year and have no complaints, the only
part
I regret lossing is the electronic 63dB step attenuator. Those are a
little pricy.

Terry

Because the bulbs has different resistances, dipwad. The power is v^2/r
like any cb operator knows. Free space has a resistance too and it is
377 ohms. But you can't change the resistance of free space like you
can do with a light bulb. So the power is e^2 / 377 watts per square
meter no matter what you do...dipwad. Mark and I are waiting for you to
get that NAL so we can throw a beer enema party you dumbass electrician.

Yes. The nulls of the Quantum are not as effective in the evening with skywave propagation. So, I just tuned to 790, tuned the loop, and then used the QX circuit to get a very narrow bandwidth and a lot of gain. While the QX circuit is very helpful when it comes to separating adjacent signals, I was still hearing other stations in addition to Radio Reloj.

On the other hand, I was only using a SW7600GR, inductively coupled to the loop. I'm sure I'd have heard more on one of the tabletops with narrower filters.

Toad wishes he could fill up the free space between his ears as readily
as he fills up the free space in his rectum.

2887. A long post on audio for SWL.

Newsgroup: rec.radio.shortwave
Date: 2006-08-22 11:55:02 UTC
From: r2000swler@hotmail.com
Message-ID: <1156247702.028280.307380@75g2000cwc.googlegroups.com>
Source record: 89049

One topic often ignored, or at least often misunderstood, is the
received audio.
Simply put, the whole goal of receiving DX stations is to actually
understand
what is being said. Anything that degrades understanding degrades
reception.

First, there is no good substitute for having a professional hearing
test.
My speech pathologist friend agreed that out of the many that I found,
this one makes no claims and might spot "gross problems".
<http://www.freehearingtest.com/test.shtml>

The speech pathologist pointed out that "if your on line friends are
even half
way serious about listening to and understanding weak voices in a noise
environment, they really should have their hearing test by a
professional".
She pointed out that subtle hearing deficits can have a major effect on
one's
ability to understand. I have learned that the further an accent is
from the version
I hear every day, the stronger, as in better SN/N, the signal has to
be. And for
the foreign languages that I understand, even less noise is allowed.
Since I can't
do very much about the noise, I try to not degrade the received audio
any more
then I must.

>From my perspective anything that degrade or distorts the received
signal simply
adds noise. And some of what I am saying appears to contradicts other
parts.
For instance I feel that under ideal conditions there should be no
bandwidth limits.
But I am a strong believer in Dallas Lankford's elliptical low pass
audio filters. And
I love narrow crystal filters for some situations.

Quoting form Kiwa's "Tips for Improving Receiver Performance",
<http://www.kiwa.com/rxtips.html>:

"All capacitors from the point of detection to the speaker output
should be examined.
All ceramic capacitors within the audio path (from disc to SMT types)

should be
replaced with a polyester type such as the Panasonic V or B series
(available from
Digi-Key) or WIMA MKS-3 types. Low pf values (less than 10,000pf) could
also be
replaced by polystyrene types (available from Mouser7). Ceramic
capacitors,
especially the general purpose disc capacitor types are notorius for
creating bad
audio. Probably the best description as to what they do to the audio is
that they
create a smearing sound which reduces the overall clarity to the audio
quality.
The polyester types are much more transparent and they will improve the
audio quality."

There have been several threads on the effects various capacitors types
have on audio.
Instead of reinventing the wheel I will offer some links to pages that
detail and display
these effects.
<http://members.aol.com/sbench102/caps.html>

Walt Jung has a very interesting group of very informative articles
regarding amplifiers.
And one especially useful pdf showing a "real time capacitor checker"
<http://waltjung.org/PDFs/A_RealTime_Signal_Test_For_Capacitor_Quality.pdf>

To be fair, Ron Elliot has another viewpoint.
<http://sound.westhost.com/articles/capacitors.htm>

Mr. Elliot has some fine designs and I love his simple MOFET power
follower.
Very clean and very simple.
<http://sound.westhost.com/project83.htm>
Mr. Elliot also has what he calls a "Sound Impairment Monitor"
<http://sound.westhost.com/sim.htm>
<http://sound.westhost.com/project57.htm#top>
I found his first unit to be very usefully in evaluating amplifiers and
amplifiers
that showed significant "difference" also degraded weak, poor S/N,
audio
signals. Hi unit also shows the effects different capacitors have on
audio.

Spoken language is made up of small pieces called phonemes.
Anything that causes phonemes to be misunderstood reduces
intelligibility.
Since most readers will speak English as their primary language, I will
use
English words for examples. Other languages will suffer from similar
effects,

though naturally the exact sources of confusion will vary from language
to
language.

It is important to realize that even if you can not tell sailing from
failing due
to audio defects, you can often get at least the gist of a conversation
from
context.

These are links to interesting information about audio intelligibility.
I used a similar set of words to those in the first three links.
While these were designed for sound reinforcement studios, they were
the best I could find and have been very useful in my ongoing quest
for improved reception.

http://www.meyersound.com/support/papers/speech/drtlist.htm
http://www.meyersound.com/support/papers/speech/pblist.htm
http://www.meyersound.com/support/papers/speech/mrtlist.htm
http://www.meyersound.com/support/papers/speech/section3.htm
http://www.meyersound.com/support/papers/speech/appen.htm
http://www.meyersound.com/support/papers/speech/glossary.htm#drt

"Communications and speech intelligibility"
http://www.isvr.co.uk/spe_hear/comint.htm

Thoughts on "HiFi" SSB,
"What is Lo-Fi - Mid-Fi - Hi-Fi and Extended SSB (ESSB) ?"
http://www.icycolors.com/nu9n/essb.html

"The Effect of Bandwidth on Intelligibility"
http://www.icycolors.com/nu9n/images/Sound.pdf

This is a quote from
<http://www.meyersound.com/support/papers/speech/section2.htm>:

"One of the most obvious aspects of sound system performance that
affect intelligibility
is frequency response. Severely band-limited systems deliver speech
poorly. For instance,
telephones are generally limited to a 2 kHz bandwidth, and this makes
it hard to distinguish
between "f" and "s" or "d" and "t" sounds."

This is a link to charts that show the effect of increasing noise to
intelligibility.
<http://www.meyersound.com/support/papers/speech/mbn.htm>
<http://www.meyersound.com/support/papers/speech/mf.htm>

And this chart is usefully in that it shows the effect of a
"competing", and
unwanted, interfering voice(s).
<http://www.meyersound.com/support/papers/speech/mv.htm>

Little things can matter a lot more then I would have believed 18
months ago.

With every minor improvement I have made in my system, there has been a
direct and corresponding increase in my ability to understand weaker
and
weaker signals. This is more then just my opinion, it is the result of
careful
measurements, over a 12 month period using the ISM/HiFer beacon that
I have already mentioned.

I hope some find this useful.

Terry

Terry,

A big AMEN to everything you've said about the importance of audio quality in DXing and receiver characteristics. This is one of the key areas in any receiver I consider. If it doesn't provide high-grade audio out of the box, I will look at mods for audio quality that my friend Craig at Kiwa Electronics proposed. He first helped me out with an ICOM ICR-70 in the 1980s, and later I saw (heard!) what he could really do with audio quality when designing equipment from the ground-up (ie, the Kiwa "MAP" unit).

The clean, low distortion audio from the SDR-1000 is one of the reasons it's my main receiver. In a listening environment like the Pacific NW where there is less thunderstorm static, particularly at sunrise with a Beverage antenna at the coast, a quiet receiver can REALLY reveal the weak signals at the noise floor.

Fortunately, the manufacturers have come a long ways with audio quality since the days of the "wooly" JRC NRD-515 and the excessively bassy response of the stock ICOM ICR-70. More often than not, the current rigs have far better audio than communications receivers from the 1980s and 1990s.

so?
what matters is what power gets to ANNTENA not what is put out by the
tranmiterr
likewise even where wattage is the issue like the Ham bands I tansmit
with (at the amp) say 3 kw if my my feedline loss is 50percent
> Mark and I are waiting for you to
> get that NAL so we can throw a beer enema party you dumbass electrician.
no I am quite certain Todd will not get an NAL

indeed I would be pretty sure if I had any reason to believe that Tood
was transmitting over the line somewhat, the FCC doesn't realy care

now find a way to convining accuse Todd staion of somehow devilering
coded messages to Al Queda sleeper cell and you might have a chance at
geting an investagation

why would the fcc give Todd an NAL if I do something?

besides I wasn't tlaking an unlicensed station or has yours been
revoked?

In these days of mobile telephones, etc., morse code just gets in the
way of emergencies.

But there's nothing to prevent people who appreciate and love the
language of Morse, the way it sings, its universality, its beauty,
from continuing to use it way into the future.

It is the beauty of Morse, in plain English, never mind the
abbreviations, which boy scouts and others who show an interest should
be taught to appreciate.

What in the world is a Chinese creation. We should then refer to older
Sony radios as Japanese creations, Ford car radios as Chinese
creations, Volvo cars as multinational creations, etc. Consumer and
other products are produced by countries rather than companies?????

Your best bet is Ebay. As with other not widely produced Sony radios
they show up on Ebay, but the prices reflect radio collector rather
than radio user interest.

Yeah,

She changed her call to K9NI, issued Saturday. She pulled the Blog ast
week.

BTW, there are a number of us that have paid her for radio gear that
she has not deliver to this date. It's going on 3 weeks now since she
confirmed payment. Ms. Martin is also very quite right now and will not
respond to any of our e-mails even though she is very active on here
Linux forums. We know she's listening.

Be Forewarned.

That's right....The FCC is looking at the electrical field, it is the electrical field that causes harmful interference, not the wattage, You can run 5,000 watts into an antenna and still put out a part 15 signal, just bury the antenna in the ground, the soil and rock will damper the electrical field.

Todd

Toiddie's still confused and PO'ed at the FCC...Wonders why the
FCC didn't consider his applications for LPFM stations written in
crayon. And if that wasn't bad enough, now he's miffed that he can't
get any cooperation for FCC staffers after having used just about every
profanity and vulgarity in the book on them.

Personally...I say THANK-YOU FEDERAL COMMUNICATIONS COMMISSION!

Hay stoopid, that person is posting from Korea and is quite obviously
not under the FCC's jurisdiction. As to the laws of physics, it is
crystal clear that you don't have a clue. Go crawl back under your
bridge.

Why would they be? 10th graders aren't interested in listening to a bunch of
60yr old men act like 8th graders.

I used the term "creation" because this radio had nothing much to do with the well known (and highly regarded) German firm Grundig, except for the name. You are correct in that the components did come from many countries; though it appears from looking on the inside that the majority of them did come from China.

Um dumb fuck, waiver can be filed at anytime, those applications did have a waivers (see 47 CFR 1.3) "The FCC may consider waivers at any time if good cause is shown." The U.S. Federal courts has gone even farther and said "The FCC MUST consider waivers" (see WAIT RADIO v FCC 1969)(see TURRO v FCC 1985)(See DUNIFER V FCC 1997) so once again steve YOUR A FUCKING IDIOT!!!!

Mark,

I think it's best if you don't post in radio threads anymore, you don't know what you're talking about. If Todd listens to your advice he could get into even more trouble than he already is and you could be charged as an accomplise in his illegal pirate station operations. Then you won't be able to attend Stevie, Woger, and Lloyd's N9OGL NAL enema beer party, and they very much want you there to help administer the enema's.

Great collection of references, Terry. I have to endorse the above statement from recent experience with my new FT-817ND. Right from the outset, I detected a raspy distortion on CW and SSB, and later on detected a more subtle level of it on AM. The FT-817 does not have AM synch but you can use it very effectively in unsychronised ECSS mode by tuning an AM station using LSB or USB - the carrier is well enough filtered that even though the tuning steps are 10 Hz, the zero beat error is not strong. However, I relaised that the raspy distortion was being turned on and off or was being modulated by the zero beat error.

Went back to the dealer and found their demo unit has the same distortion. Searched the Yahoo group and found sporadic references of others detecting this distortion. Posted a message about it and a poll and was surprised by the range of responses, especially after I have formed the conclusion that it is a design fault. The vast majority of respondents do not detect the distortion, even after I posted a sample A-B comparison of FT-817 received audio with and without the raspiness. By backing off on RF gain so that the signal strength falls below the AGC threshold, the distortion rapidly diminishes; it appears to be at its worst just at and a little above AGC threshold and eases a little with stronger signals. Even QRN can trigger the AGC and as a result the noise is distorted and worse than it would be through a linear system.

This distortion looks to be mainly harmonic and at its worst is about 1%THD - doesn't look like much but it sounds worse! Perhaps because the harmonics are all of similar amplitude. When simulating a distorted CW signal using a multitone generator, the addition of the fifth harmonic had a pronounced effect.

If I'm right that it is a design fault, then it would appear that many of the respondents who said that their FT-817 does not exhibit the problem must have faulty hearing or a faulty monitoring system. Certainly, passing a CW (or for that matter, any) signal through a low pass filter will suppress harmonics of a high enough fundamental frequency and have a mitigating effect. This would be most pronounced on CW because harmonics of bass speech spectrum and of QRN will still fall within the passband.

I very much want to fix the problem but continued warranty coverage and tiny SMD's are rather large barriers. And so far, Yaesu has not allowed anything more than that this may be "more or less nominal for this radio"!

> Will doing both make Radio Listening Beter : Yes -or- No ?

You are confused by the terms differential and common mode?

Common mode means that you have the same voltage or signal on both antenna and ground. Imagine a sine wave time varying voltage in phase on the antenna and ground lead. Even though it is varying since it is the same signal on both terminals it will not induce a current through the radio input because there is no potential difference between the terminals but if the signal was only on one terminal (antenna) then there would be a potential difference and current will flow through the radio input.

Consider a dipole antenna with one leg connected to the antenna and the other leg connected to the ground terminal. A local noise field will cause the same time varying voltage to be generated by both legs of the dipole and then the radio terminals so that the radio does not respond to it. However, a distant station will cause a time varying voltage 180 degrees out of phase to be generated and when that time varying potential difference appears at the radio terminals that will cause a current to flow from the antenna terminal to ground terminal.

The result of using a balanced antenna helps the radio reject local noise while responding to the distant radio signal in this way. If we were discussing amplifiers we would call it common mode rejection.

Source record: 89093

I need to learn more about the various solar indices and propagation. I saw on the web that the K-index at mid-latitudes today measured a 2, and a low k-index, as I understand it, is good for HF propagation. However, it seems like propagation is quite poor at the moment. Tonight was the first night in a long time I didn't hear Radio Romania on 9690, and though there is a lot of atmospheric noise right now at my location, it wasn't enough to blot out the signal I ordinarily receive from Radio Romania.

Time to hit the books!

Steve

Use a 10 X magnification like I do. You can buy binocular scopes that
mount on the bench or you can wear the head gear then those small SMT
components will not be a problem down to 0402 size.

It's not any harder than reading the gauges on your dash board.

Thanks for everyone's advice. I'm just posting this here for the
archives.

The following is a description of how to re-thread a GE Superadio III
vernier tuner as the Service Manual doesn't discuss it.

Background:

I knocked my tuning wheel loose while fixing my radio. I had a
problem last year at this time where after a half hour of use, my
then ~9 year old radio would slowly tune itself across the band
like an invisible hand was turning the dial.

I tried to diagnose it, but the problem went away and didn't return
after I hit the tuning pot at R2 with freeze spray.

I was OK for about a year, until it re-occurred this summer. I hit
R2 with the freeze spray again, and the problem would only go away
momentarily. I looked at the bottom of the circuit board and it was
quite dirty with flux. I theorized that in humid weather the rosin
was affecting the circuit. I cleaned the PCB around R2, accidentally
knocking off the tuning wheel. Now the problem seems fixed but I
couldn't get everything back together as I didn't take notes, never
intending to remove the tuning wheel and thread.

Summary:

The small loop on the string attaches to the spring hook on the tuning
wheel, then around spools 6,1,2,3, loops capstan twice,4,5 and then
from spool 5 to the big hook on the wheel:

(ASCII art facing front of radio)
1 ------------------ Vernier ----------------------------- 2
| 5 |
6 ------------- Spring Hook \ 3
Wheel "D" slot at R2 \ |
Big Hook \ Two Capstan Loops
\ |
-----------4

Details:

Equipment Needed -

1) Locking forceps or very small needle nose pliers to grip thread.
2) Small hand mirror to view underside of tuning wheel where thread hooks to.

Procedure -

A) Place vernier at upper limit of band (108 MHz FM / 1700 KHz AM).
B) Tune pot R2 to upper limit of band
C) Place small string loop over tuning wheel spring hook.
D) Attach wheel so hooks face back of radio.
E) Thread string from wheel to spool 6 to spool 1 to vernier.
F) Slowly turn wheel clockwise, spooling string on wheel until vernier is at lower end of band (88 MHz FM / 530 KHz AM).
G) Thread string from vernier to spools 2,3, twice around capstan, 4,5, then through wheel slot. Place big loop around big hook using forceps or very small needle nose pliers to grip end of loop, a mirror, and then snagging loop on the hook.

Tips -

I broke the string at the knot of the big loop because I didn't have locking forceps or a very small needle nose pliers. I recovered by making a bowline knot in broken end, and then with strong thread, another bowline loop chained to the new big loop I just made which I then attached to the big hook.

>>Anyone have a website address for the R.F. Systems that makes SW antennas sold by Universal Radio

Yes, its: htttp://www.rf-systems.nl

Steve, thanks for the good word on the MTA, I've been waiting to save enough to buy one, and I'll be ordering it in a week or so.

I once had their old version T2FD for a few years. A complete lack of noise makes shortwave radio listening and dxing a wonderful experience.

The old one was rated for use from 5-30 MHz, but I was listening (not just detecting) low powered Africans into the 90 meter band. The new version is rated down to 3 MHz but I don't have the space to put one up anymore or I'd be able to tell you the difference.

Just as a follow up, at midnight last night I heard LBC in London on
1152 and listened to it for around half an hour. There were periodic
deep fades that wiped out the signal all together, but for most of that
time I was making easy copy, easily understanding the discussion. Mind
you, I'm sure this station broadcasts with a lot of power, but still it
was a kick to listen to a British AM station.

I also heard Radio Reloj again on 790. This time around I was using the
Quantum Loop with an SW77.

Steve

2954. Dylans Solidifies Status as Old Coot

Newsgroup: rec.radio.shortwave
Date: 2006-08-23 12:57:29 UTC
From: David <rickets@knac.com>
Message-ID: <u3koe29u841h55u4p6prsjlu8uss1ji8o3@4ax.com>
Source record: 89116

LOS ANGELES (Reuters) - Bob Dylan says the quality of modern recordings is "atrocious," and even the songs on his new album sounded much better in the studio than on disc.

"I don't know anybody who's made a record that sounds decent in the past 20 years, really," the 65-year-old rocker said in an interview with Rolling Stone magazine.

Dylan, who released eight studio albums in the past two decades, returns with his first recording in five years, "Modern Times," next Tuesday.

Noting the music industry's complaints that illegal downloading means people are getting their music for free, he said, "Well, why not? It ain't worth nothing anyway."

"You listen to these modern records, they're atrocious, they have sound all over them," he added. "There's no definition of nothing, no vocal, no nothing, just like ... static."

Dylan said he does his best to fight technology, but it's a losing battle.

"Even these songs probably sounded ten times better in the studio when we recorded 'em. CDs are small. There's no stature to it."

Bob Dylan is right. Music today is bad - both in content and
production.

Another boring old fart makes a fool of himself. Bob, let me
introduce you to Harry Belafonte. Harry, Bob.

> "I don't know anybody who's made a record that sounds decent in the
> past 20 years, really," the 65-year-old rocker said in an interview

Including him. Dylan hasn't made a good record in 25 years.

And since when was Dylan ever a "rocker"?

> Dylan, who released eight studio albums in the past two decades,

Well, *his* certainly isn't!

> "You listen to these modern records, they're atrocious, they have
> sound all over them," he added. "There's no definition of nothing, no
> vocal, no nothing, just like ... static."

That's called Tinnitus, dumb ass. That you can't hear any longer
doesn't mean that music is no good.

> Dylan said he does his best to fight technology, but it's a losing
> battle.

Dylan should go back to fighting nap time.

> "Even these songs probably sounded ten times better in the studio when
> we recorded 'em. CDs are small. There's no stature to it."

Right, because the *size* of the media makes all the difference in the
sound!

Congratulations, you just qualified for your old age pension. Whining
about "today's music sucks - back in my day we did it right" officially
makes you an Old Coot.

Mike

That's just fine with me bunkie! Today's crop of kids are
the most pampered soft-assed bunch of milk-fed babies
this frig of a country has produced to date. Draft em and ship
their ass to Iran so they can take over their oil wells and I can
get gas for cheap. Tell em they ain't commin back home till gas
costs $1.00 per gallon again. PHOOEY!

Well, when I used to buy 33-1/3 rpm LPs there was all kinds of surface noise, pops and clicks, all over them. Columbia Records, Dylan's label, was especially atrocious in their LP manufacturing.

Nothing like listening to music on 1st generation tape, in the studio, on big JBL speakers, that I agree.

Yeah.

It's P=IV, where P = power in watts, I = current in amps,
and V = voltage.

Now a little refresher from a few months ago:

Telamon wrote:

I for one would appreciate it if the political nut cases would stick to
the off topic flame threads or start their own thread.

Whatever wrote:

Time for some irony and hypocrisy. Just a small sample.
http://tinyurl.com/pz8do

"Carter, K8VT" <k...@ameritech.net> wrote:

Very interesting...320 posts, almost all of them political per se, not
complaints about OT posts. (Sorry, didn't have time to read all 320, but
the ones I did read *clearly* demonstrated the irony).

I think "hypocrisy" defines our boy up on his high horse quite well. Yet
another example of "Do as I say, not as I do".

Telamon wrote:

You and whatever have a high number of off posts. You and whatever
generally do not post helpful replies to questions. You and whatever can
point back to a period of time during a contentious election and that's
it for me but you and whatever are a different story. Do continue
looking like a clueless jackass as you do in most of your posts.

Carter, K8VT wrote:

As you *still* don't get it, *you* appear to be the "clueless jackass".

Telamon wrote:

I'm not a hypocrite. I contribute a lot of on topic and helpful posts to this news group and I don't feel the need to justify my posting history to someone with your poor posting history. Your recent AND long time posting history is most off topic political posts. This is the only post in two days so it is clear to me that you just want to ague and denigrate me so into the kill file with you.

< Plonk >

Carter, K8VT wrote:

First, sorry to drag this thread on, but you still don't seem to get it.

Next, maybe you do need to justify your posting history as this is really at the heart of the debate...

* you accused and chastised me (and others) of a "high number" of OT posts.

* 'Whatever' called your bluff, did some research and caught *you* with your pants down--*320* OT posts (while I have of 146 posts total, maybe 100 OT). That would seem to make *you* the winner of the "High Number" award, not others. Sort of like a guy with 320 traffic tickets calling a guy with 100 tickets a bad driver.

* When you accuse people of doing something wrong and then it comes to pass that *you* have done the same "wrong" thing almost *three* times as often, then, yes, you *should* justify your posting history or be exposed for the hypocrite you are.

As to your trying to justify your 320 OTs because you post on topic also--well, that's a little like a bank robber saying it's OK to rob banks because he gives some of the money to charity. NOT! OT is OT and your 320 trumps my 100. Period [.]

Telamon wrote:

so into the kill file with you.

< Plonk >

Carter wrote:

Thought I was already there(!) but, please, do so again. It's getting too hard to follow your illogic, denials, dodging, weaseling and bogus "justification" of *YOUR* 320 OTs.

FWIW, I don't think there is much of Grundig europe left after the
various operating units were sold off. After looking at their product
line my impression is that they are just another small consumer
electronics company that sells goods manufactured in asia. There is
little germanic about them that I could see.

How the Soviets Gave the Mullahs the Bomb
...
1991: A top-secret report from the newly formed Russian intelligence service claims that Iran has obtained at least two nuclear warheads from a batch listed as missing from Kazakhstan. The nuclear weapons were reportedly smuggled across the border to Iran in 1991 and are under the control of Reza Amrollahi, who is head of the Iranian Organization for Atomic Energy and is also in charge of recruiting atomic scientists from the former Soviet Union.

You obviously never heard him do "Man Gave Names to All the Animals" live in
concert. The sound pressure was amazing, like a horizontal G-force.

2977. [For sale] OLD/Antique portables, grundig, philips, SW, AIR, french design etc

Can you folks verify the correct cable connections between a PC serial port 9-pin or 25-pin and the J2 accessory connector on the rear of the Universal M-7000 Decoder.

M-7000 RS-232 PC Serial Port (9-pin)
J-2 Pin

4 TD Transmit Data 3
5 RD Receive Data 2
6 DTR Data Terminal Ready 4
17 Ground 5 Signal/ Logic Ground

6 DSR Data Set Ready

7 RTS Request to Send

8 CTS Clear to Send

NOTE: RS-232 Pin 4 tied to Pin 6
Pin 7 tied to Pin 8

M-7000 RS-232 PC Serial Port (25-pin)
J-2 Pin

4 TD Transmit Data 2
5 RD Receive Data 3
6 DTR Data Terminal Ready 20
17 Ground 7 Signal / Logic Ground

9 DSR Data Set Ready

4 RTS Request to Send

5 CTS Clear to Send

NOTE: RS-232 Pin 6 tied to Pin 20.
Pin 4 tied to Pin 5

Yeah,
Stupid governmental RF drafts and EMF abortions...
take away his radio and he won't do that again.
Makes me sick to think about all those satellites beaming crap down on us,
killing babies and causing teens to
enlist for no reason. Who would wanna defend this rat-hole anyway? I say we
all pack up and go to Somalia. It never snows there.
I really hate Reagan and Nixon both. Nixon especially, because all his
equipment was wired. Not a single RF device in the bunch.
Losers.

Come to think of it, why does the government continue to force these stupid
wireline telephones on us anyway?

here is what passport has to say on the AN-1 antenna:

Sony Antenna Works Nicely

Sony's active (amplified) AN-LP1 loop antenna helps bring weaker stations
out of the mud.

It is especially useful if you live in an apartment or townhouse where an
outdoor wire

antenna isn't feasible.

Don't confuse this with the Sony AN-1 antenna, which is inferior.

Bitter? Hateful? Nasty?

Why is it that you simply don't like the truth being pointed out to you, especially when it concerns one of your eBay observations?

The TRUTH IS it looks as though everyone who bid on it thought it was worth more than about $50.

Is that difficult for you to accept?

And heck, the R7 IS still shown in your collection, even though you said you sold it.

Am I being bitter, nasty and/or hateful by pointing that out?

Source record: 89154

sometimes people complain when I point out people paying real stupid prices for something on eBay.

over the last few years I have been saying how stupid people have been for paying crazy prices for homes. I said they would be sorry in the end and it is starting to happen:

this is from an MSN article on home sales:

I recently sold a house in Rochester Hills," Waquad says. "It was purchased a year ago by the seller for $615,000 -- a newer house. He changed all the appliances, the carpets and painted. He never lived in it. He must have spent at least $20,000 to $30,000 fixing it. We got it for a buyer for $440,000."

the point is that there are consequences to being a stupid buyer. I am just trying to get people to think before they throw away money.

were you in the Vietnam war and came back with mental illness?
you act like someone with a severe mental issue and some people try to be nice to you but all you do is linger around the group and attack people day after day.
very sad indeed that many people have been driven off by your attacks among some other habitual attackers on the group.

All well and good, but it is THEIR money. Not MY money, not YOUR money, but THEIR money.

And if folks want an item and desire to bid it up on eBay it's THEIR money. Now YOU might THINK it's a high price, but it's THEIR money and they want the item for whatever reason.

Something to think about, after all we're not all as blessed as Mike Maghakian.

Do us a favor and post a detailed review of this antenna after you've
used it for a while, describing where you have it mounted and how it's
grounded.

On the other hand, rappers and screeching females of the current music scene give me a serious headache. I suppose Nelson Riddle, Mancini, Brubeck, and all the other instrumentalists of that era give generation x'ers a headache. Perhaps it is true that each generation picks music that their parents hate as a ritual of independence. One thing is for sure: advancing technology has not done much to improve the quality of recorded sound. I remember my home-built Hi-Fi setup of the 50's: KT66 finals glowing, Acrosound output, Wharfdale cs-12 with a sand-filled cabinet, and some carefully-made German Polydor lp's playing The Bristol Bar Quintet on a good Garrard. It sounded just as good as any new-tech Chinese outfit playing compressed mp3's. Just remember, music is a generational thing. I just shudder to think of the music that the next generation is going to select to rebel against their parents.

I'm never really sure about how to respond to those requests,
especially the unusual ones that offer a finders fee. I've only seen a
couple of CRF1 radios on Ebay. My impression is that it is slightly
less interesting than the 2010. The impressive looking CRF320 would be
a lot more fun to spin the dial on.

Dr.? PhD?

He disappeared after it became apparent that the jig was up. I think what may have done him in was the fact that he called me up and claimed I got him fired.

I then called his employer and verified that he had indeed not been fired.

My guess is that his employer had a chat with him after that.

That's a perfect example of someone who was very late to the real
estate buying mania prevalent in many major cities for the past 5
years. I'm sure he was one of the last who got into a bidding war that
escalated many multiples over asking price. Unfortunately double digit
inflation disappeared and he couldn't flip the house at a profit.
There are many holders of over-priced real estate now.

Good story, but it doesn't tie well to collector prices people are
paying for radios on ebay.

>
> the point is that there are consequences to being a stupid buyer. I am just

The consequences to paying $500.00 for a Sony CRF320 are far far
different than the consequences of paying $750k for a house now worth
$500k.

The reason for that is Hamfests and Swap Meets in general are DEAD.
Finished! Kaputski! Stick-a-fork-into-it! (etc..etc..)
Dayton Included too. I went to Dayton this year after a 5 Year sabbatical.
Fully 1/3'rd of the outside vendor spaces were empty.
Just 5 Years ago this was a rarity and 10 years ago it was downright
impossible.

Why? Reasons are many....aging ham/swl population, SK's, health/travel,
cost
of gas food lodging etc... then again, why drive when you can order new
online
an it's at your door via UPS in a few days?

Ham radio is changing and it is aging. more than HALF the hams I used
to talk with on 75M HF just from 10 Years ago are all SK's. That alone
speaks volumes folks!

E-Bay did not kill hamfests. Hams themselves are dying off and
most of the stuff is ending up on e-Bay where it's a feeding frenzy.
This too will end in a few (10?) Years time also.

In short....Wayne Green (W2NSD) had it right all along folks.

Enjoy the rest of the ride.

As with most products, performance is a function of the application
and the environment. I have an AN-1, and have found that when I'm in the
North Woodsit does a creditable job for casual DXing. It also requires
the right radio and doesn't do shit for some.

It's not my first choice for use in the city, or even at home, but on
the road, it's a particularly useful item.

$50 is more than a fair price, but I've seen them go higher. And not
unjustifiably so.

Exactly the point...

so, once again:

...and India gets a free pass why??

From: Lisa Simpson <none@none.com>
Message-ID: <b57Hg.78907$Eh1.6249@tornado.ohiordc.rr.com>
Source record: 89198

Some time ago I picked up a Sangean ATS-803A off ebay only to discover that it was stone deaf off the attached telescoping antenna in the SW bands. I replaced that with a longer one, same problem. I then hooked it up to one of those Radio Shack amplified shortwave antennas (also from ebay), and voila! It works well. Most probably an indicator that something is blown inside. I sent it to Radio Shack who "tuned & tweaked" it & sent it back, still stone deaf. After chatting with several other owners of this receiver on the Yahoo group, I decided to take the plunge & try another one.

Boy am I glad I did! This second one is absolutely amazing! So far, in just a coupla hours twiddling the knobs, I've received nearly 40 SW stations!

Now I'm looking to send off my first one to someone competent that knows what they're doing to get it repaired, as I'm incompetent to (no knowledge of electronics or soldering, and I'm too old & my hands are too shaky for delicate work).

Anybody know anybody . . . ?

and you got it exactly right Idia does as it pleases becuase it
refused the benifits of signing the treaty in favor of doing all the
work themselves

Iran could have done the same

It could do so now by returning most of forgien hardware and amterials
so could NK

they have decided to try and have there cake and eat it to

First of all, it's President Bush.

Secondly, wait until a terrorist blows your family to kingdom come. You'll be one of the first to be asking how this could ever happen to you.

Did you serve in Viet Nam? You sound like someone who has no idea what it means to serve your country.

Just stick a sock in it.

Source record: 89205
Cross-posted to: rec.ham-radio.swap,rec.radio.amateur.homebrew,rec.radio.boatanchors,rec.radio.shortwave

Yep! All them are reasons I have stopped attending Dayton and many other hamfests.
But ebay is also a contributor. I got some 2m old crystal rigs via ebay and shipping
cost more than the radios. My last time at Dayton a few years ago it was a costly
one day ticket (my health not good either) and $8 to park in a handicap parking spot
that might as well been down at the mall it was so far. I thought handicap parking
meant CLOSE to the doors. With Gas about $3 a gallon depending on the wind...
another $100 bucks down the tail pipe. The items for the most part these days
are "vintage" things that have been to more hamfests than I have or they are
"Like New" and priced as new. Most "Homebrew" projects in magazines and
books these days have little chance of success with the ol' junk box and requires
a large part of it to be bought and often via mail. "What radio supply store?"
When you do get to a hamfest the people are rude, bump into you, step on you,
just same as many drivers on the road have aggressive attitudes. All the fun of the fest's
has gone as well as a pleasurable drive getting there has gone. And the total cost
of just going is 1/2 the cost of a new 2m rig. UGH!!

Oh and don't forget other tech'y things like the cell phones that has displaced a lot
of would be radio operators for maybe contacts with more secure and reliable
contacts. 2m and 70cm not as impressive as it used to be. "What do you mean,
point the antenna UP?" LOL ;-) My wireless home phone and my computer
has more MHZ than my radio now. ;-(

Maybe it's as well though. Having started in the TUBE days and seeing SMD parts
now I can't find, or use if I could find them for projects... might be appropriate that we go
out together in a few years.

Sorry I missed the original post to this thread. Hope it didn't wander too far...

Have rag chew paper too . LOL

OK, India doesn't sign the treaty and thus gives up the benefits they
would have gotten from signing the treaty.

Fine. Got it!

They therefore are going to "do all the work themselves".

Fine. Got it!

But THEN, we go ahead and give them all the benefits anyway (and essentially -reward- them for NOT signing the treaty?????) Duh!!!

Apparently, you are saying we give the "benefits" to those that DO sign the treaty and we give the "benefits" to those that DON'T sign the treaty.

Which brings me back to my original question: Why does India get a free pass???

Veterans group: bush must reinstate draft or lose Iraq.
www.rawstory.com

I believe the U.S.Military Draft will be reinstated this year,or no later than early next year.The sooner the better in my opinion.One thing is for sure,if things keep going the way they are now,the U.S.Military Draft WILL make a comeback.

There are some democraps on my street who Desperately! NEED to be DRAFTED! They are so shiftless,they wont even mow their yards or go out and get a job..

I wish to protest the above posting in the most vehement of terms.
Please note that the word 'Major' indicates something large, noticeable
and of value.

The obvious lack of ANY of these characteristics in the Laughing Rectum
that walks upright, I'd venture to say he isn't 'major' ANYTHING and
should be relegated to the 'smallest sphincter' category.

Thank you for your attention in this matter.

Sincerely,

mike Eduardo II

That has long been common knowledge to those of us who noticed the
downhill slide of radio receiver quality when the Volume knobs became
larger than the Tuning knobs.

Note: There is excellent reason to believe that the Department of
Defense is deliberately not reporting a significant number of the dead
in Iraq. We have received copies of manifests from the MATS that show
far more bodies shipped into Dover AFP than are reported officially. The
actual death toll is in excess of 10,000. (See the official records at
the end of this piece.)

Hmmm. I didn't realize that, but I guess it's true of many, if not all,
RF-Systems antennas. Do you know how the balance is achieved? I know
there's a helically wound antenna element on the inside...I figured it
was just fed at one end.

IIRC, don't those things have an FET right off the antenna that is
notoriously fragile? Seems this is not a rare problem.

I have my eyes peeled for one at a yard sale, but so far no dice.

Best wishes.

Sometimes an old World War Two era bomb or shell that didn't explode is found in Europe or wherever.Nuclear bombs require almost constant maintnance or else they soon turn into duds.A few years ago,I read about an old Civil War era cannon ball that was found.It was still ''good to go''.All bombs are not created equal.

T2FD - Tilted, Terminated Folded Dipole.

Basically a folded dipole antenna with a termination resistor for
transmit loading and most likely no better for receiving than a
horizontal positioned folded dipole for receiving.

A dipole or a folded dipole is a balanced hertzian antenna where no ground is needed for it to operate unlike a single wire antenna where the other half of the antenna is ground.

You can trace the folded dipole element in the picture. It starts at the coax connection and at the top of that spreader is where the ~ 600 ohm termination resistor is located. It's a low noise antenna because it is a loop type antenna that is not as sensitive as a open dipole to local noise fields.

Sorry about that, I didn't notice the other one (MTA) just the T2FD.

The T2FD will be a much better antenna.

Thanks for your reply. I actually have the CRF 320, CRF 220, CRF-V21,
the ICF-6800WA, 2010, SW77, SW55, etc... that CRF-1 is the one missing
from the lot.

- It's worth noting that RF Systems has a much better website
- than they had the last time I looked:
-
```

- http://www.rf-systems.nl

For One and All,

RF Systems Direct now appears to be their OnLine Store.
RF SYSTEMS DIRECT => http://tinyurl.com/sx7gx
http://www.rf-systems.nl/direct/E_frame.html?http://www.rf-systems.nl/direct/E_art_39.html

MTA Antenna -by- RF Systems
http://www.rf-systems.nl/direct/E_art_39.html
MT Antenna -or- Magnetic Transfer Antenna (MTA)
The RF Systems "MTA" is a non-amplified Vertical
Receiving {Only} Antenna Covering 500 kHz to 30 MHz.
- - - The Earthed Antenna Element together with the
Magnetic Transfer (MT) Technology ensures a lower
background noise level, and most communications
receivers offer enough sensitivity to compensate.

MTA Antenna -by- RF Systems
http://www.universal-radio.com/catalog/sw_ant/3368.html
- - - The MT Antenna employs a Helical Form that ensures
that the Antenna has an Omni-Directional receive pattern.

IIRC - The MTA Antenna like the DX-One Professional MK 2
and the DX-10 Antenna from RF Systems is designed with
a Metal Sleave at the bottom to be mounted directly to a
Metal Pipe or Mast and should be Grounded. They work
best when they are Grounded via a Mast.
http://www.rf-systems.nl/direct/E_art_21.html
http://www.rf-systems.nl/direct/E_art_30.html

Check-Out - The WFL Shortwave TX-RX Antenna
"WFL" = Wideband Folded Loop Antenna for both
Transmitting and Receiving between 1.8Mhz and 30Mhz
looks like and interesting Loop Antenna Design for
limited (small) space locations.
http://www.rf-systems.nl/direct/E_art_22.html
- - - The Wideband Folded Loop (WFL) Antenna
is no 'miracle´ antenna' but a Loop Antenna with
a Circumference of 105 Feet, folded in such a way
that creates a compact Rectangular Loop Element
that is only 25 Feet Long by 3 Feet High.
- - - Matching and Phase Compensation Elements,
located in the central tubular part, ensure an
Impedance of 50 Ohms.
- - - The special high power Matching Transformer in
the centre part ensures that there is no conducting
connection between the Antenna and the Transceiver.
Note - For a Receive Only Shortwave Listeners (SWL)
Antenna the Wide-Band Folded Loop (WBFL) Antenna
could be 'cloned' with the same basic Folded Wire Antenna
Element "Pattern" and simply use a 4:1 or 6:1 Matching

Transformer between the Antenna and the Coax Cable.

hey - it right there on the internet - iane ~ RHF
hope this helps - iane ~ RHF

Cuhulin - Asked-and-Answered ~ RHF

Two Words : "ETHNIC CLEANSING"

In the USA {The Good Old South} we have Cajuns
and "Cajun French" - Thanks in part to Canada.
http://en.wikipedia.org/wiki/Cajun
http://en.wikipedia.org/wiki/Cajun_French

A Sad Time in Canadian History "Le Grand Dérangement"
http://en.wikipedia.org/wiki/Great_Upheaval
The Great Upheaval (le Grand Dérangement), also known
as the Great Expulsion. The Deportation or the Acadian
Expulsion, was the Forced Population Transfer at Gun
Point or "Ethnic Cleansing" of the Acadian {French}
Population from Nova Scotia between 1755 and 1763.
- - - Ethnic Cleansing Canaidian Style
http://en.wikipedia.org/wiki/Ethnic_cleansing
http://en.wikipedia.org/wiki/Acadia
http://en.wikipedia.org/wiki/History_of_the_Acadians

and now you know the rest of the story ~ RHF
.

Acadian in Nova Scotia here, since 1710 on my father's side and
1650 on my mother's. By the way, it wasn't "ethnic cleansing
Canadian style" Canada didn't exist until 1867. It was the British.

Possibly as N0VFP? The originator of this thread lists his IP
address as 71.39.225.244, and that sure doesn't traceroute back
to N0VFP. It's a qwest address which appears to be located in
Missouri somewhere.

Boy, N0VFP sure owns a lot of people here.

Yup, that's probably the problem, and I need to get mine replaced!

3087. "Who's this Gleason", from Glenn Hauser's DX Listening Digest

Newsgroup: rec.radio.shortwave
Date: 2006-08-24 10:43:35 UTC
From: sidwellfriends@aol.com
Message-ID: <1156416215.472848.27100@b28g2000cwb.googlegroups.com>
Source record: 89248

** U S A [and non]. Re discussion of airborne Martí 530, etc.: Who's this Gleason? If it's David Gleason, he's an enemy of the true broadcaster. He claims that "AM Stereo is not proven technology", when it's been a proven technology during its 26 years of use. He supported IBOC, lock stock and barrel. I had a lot of run-ins with him over how to run a radio station; he favored an anti-community and anti-career stance, while my stance has always been for fostering better relations with the DX community and the local community, and for building careers and continuing to build them, not building them only to have them destroyed at an instance. I would never hire him for any engineering job, regardless of whether my station broadcasts in English, Spanish, French or even Cantonese. 73, (Eric (N0UIH) Bueneman, IRCA via DXLD)

Interested as well to know about Gleason. Would have asked earlier but public shaming and disgrace over "Banishment for Life" from eminent radio board is excruciating. Revealing one's pig-ignorance of Mr. Gleason would be too much to endure. The angst of it all...

IBOC cheerleaders resent questions and cannot credibly refute statements about interference. They behave not as inventors and innovators but rather as cynical opportunists with much to hide.

No one minds Ibiquity sending twenty channels of color TV, internet, and movies over AM radio. The poison pill is interference.

What marks IBOC promoters is evasiveness. Why? Familial proxy poison for profit hi-jinx graced undersigned worthless scribe with insight: predators act out their worst fears. In harming others they tell us what they fear experiencing themselves. Ask, "what are they doing?" IBOC is hiding and jamming. Promoting imaginary benefits --- traffic texting --- does not for one moment conceal the unspoken --- Interference. They hide the truth because they fear its publication. They jam non-IBOC stations because they fear being jammed themselves, they're a house of cards awaiting our wind.

Exposure's what they fear. Jamming for profit is a cheater's strategy to monopolize broadcasting by those who neither care about talent nor the audience. Publicity they cannot control will stop them cold. Coldly, -Z.- (Paul Vincent Zecchino, Manasoviet Key, FL, 25 2330Z JUN 05 BT, IRCA mailing list via DXLD)

Short version of my earlier gaseous diatribe: IBOC promoters greased and cheated their way into market place because they fear its result when allowed to work. As you say, damaged stations, indifferent listeners, and a public upset about all the noise on their once useful

radios will scuttle young Struble's noisy little RF stinkbomb for good. Stinkily, -Z.- (Paul Vincent Zecchino, Manasoviet Key, FL, BT IRCA mailing list via DXLD)

But who is Gleason? I confess, I don't know. Wouldn't know him if I fell over him. Is he a Moderator? Palace Guard? Poohbah? Animist? Counterrevolucionario? Philatelist? You experienced rudeness from him as well? Just can't say anything today, people so touchy. Dr. DeV_____'s rules for safe life in today's world:

1. Touch no one.
2. Say little.
3. Nothing in writing. -Z.-

"I'd rather die on my feet than live on my knees."
- Bud, "Repo Man", c. 1984, Alex Cox
(Paul Vincent Zecchino, Manasoviet Key, FL, BT, ibid.)

He`s a VP at Hispanic Broadcasting Corporation. He`s a true believer in IBOC and loves to stick the fact that IBOC is going to end DXing in people`s faces. He tells the truth though about corporations and their true relationship with DXers.

There is no relationship between DXers, listeners, and corporations. Corporations exist to make money. The listeners and DXers don`t count. What counts is that the advertisers buy time. I might not like it, but he`s right. Corporations exist to make money, period.

He was a broadcaster in many Latin American countries for many years. If you let him, he`ll drive you nuts.

He is exceptionally corporate and speaks the truth according to the corporation and as painful as it is, he is right about how corporations deal with everyone and how they deal with ad dollars, pesos, australs or whatever the coin of the realm is, in the country where he happens to be working. If you aren`t buying time, you are of no use.

I`d say the same thing if I were a VP at a corporation. I begrudgingly give him some respect, although I generally don`t agree with him. He also goes by the name David Eduardo on other lists (Kevin Redding, IRCA mailing list via DXLD).

He did pop in a while back, maybe it was November, with some logs. I wasn't sure if
it was really him or an imposter. But like you say, he may indeed be in disguise.

Yeah! Especially since he didn't have that PhD he claimed. And of course, he didn't help himself by calling me up and claiming that *I* got him fired. That was merely *another* fabrication on his part.

> Did you pretend you were from the FBI?

Nope, just told them who I was and that Mr. Bryant was making certain claims.

Markie, Just ignore them.

They only tease you because of the stupid things you say when you
follow up. Just ignore them and they'll give up.

Stop giving them reasons to tease you. It only makes you look
more stupid.

Well, there's -another- day you woke up stupid.

As different as "apples and oranges"? I think not.

"dot com" bubble = people paying waaay too much for stocks, then the
bubble bursts, then the -entire country- was hurt.

Per Mike's post...

Real estate bubble = people paying too much for housing, the bubble is
starting to bust and people throughout the country are starting to get hurt.

A virtually identical analogy (like all bubbles), NOT "apples and oranges".

You offering your opinion--

Worth: 2 cents

You demonstrating once again why you so richly deserve your "dxAss"
moniker--

Worth: Priceless!

Does Radio Tehran broadcast in English, and if so, can it be received in N.America (east coast)?

Any info (freq, times) would be appreciated. Thanks.

3100. Hearing loss

Newsgroup: rec.radio.shortwave
Date: 2006-08-24 12:33:27 UTC
From: r2000swler@hotmail.com
Message-ID: <1156422807.865012.309890@m79g2000cwm.googlegroups.com>
Source record: 89261

Since many of in this group will use earphones it might be usefull to
limit the damage to our hearing that could be cuased by overly
load audio blasting into our ears.

Since I already have some minor loss in the 8KHz and up, I try to guard

my hearing from further damage. The last thing I need is more loss to
further limit my ability to understand signals lost in the noise.

<http://headwize.com/articles/hearing_art.htm>

I use a modified version of the clipper shown in diagram 9
at <http://headwize.com/projects/cmoy2_prj.htm>

For my pruposes I use the following values:
P1=1 K ohm
P2=1K ohm
R1=1K ohm
R2, not present , a direct connection to the diodes.
And I use 2 parallel sets of Si diodes in series to give a max voltage
of +/-1.4V.

This corresponds to a maximum sound level of 98dB with my
anceint Sennheiser HD-424. While safe for short periods,
96dB causes me to simply get tired after an hour or so, so
I can rdeuce the level with P2 to a more comfortable point.

I also have the ability to switch a transformer to allow receivers with

less AF voltage to be used. I choose to use a 70V, as in "constant
voltage", transformer to boast the common 8 Ohms to 500 Ohms. I
used the largest transfomrer I could find to reduce distortion that can

be caused by too little iron in the core.

I wanted the protection to be the last step before the earphones in
case
my amplifeir fires or I feed too strong a signal. The clipper" also
helps when
listening during the summer by clamping the lightning crashes to a more
reasonable level.

Terry

I grow my own food (no grocery shopping bills), tenured teacher (job
for life), own a scooter, and have installed solar panels to hedge my
energy costs.

I also own a gun to shoot poachers wishing to steal my vegetables, and
live in a shooter friendly state (i.e. I won't get arrested for killing
you on my own property)

How is someone like myself affected by the housing bubble, except that
it provides me the ability to get RE on the cheap?

Yours In Christ,
John

The whole country got hurt? The dot com bust didn't effect me one bit.

But I thought the topic was related to paying "too much", not selling. The people who were paying "too much" didn't know they paid too much until the after the bust.

If the whole country gets hurt, how might we protect the innocent victims of these periodic busts? Perhaps punish those would sell "too cheap"?

Frank Dresser

I probably do not understand much about your project. But wouldn't the
simple solution be to just use the AF gain judiciously? To start at a
low setting and increase only to the level needed.

Yes.
If you can be certain to never mess up.
I am experimenting with several different detectos, filters and audio
amps. Very easy to mess up and get very loud pops, squals and
other unpleasent shocks.

That, plus the fact that when trying to dig out a weak station I
turn the volume up and when someone nerby turns on a light, or
that nasty flood blender also causes very loud pops etc.

By having the limiter the last thing before my earphones I
insure that simple mistakes won't hurt.

> country gets hurt.

How do you figure the entire country will get hurt by real estate
prices slowing down.

The only crowd to get burned in this speculative madness will be those
who got in late. Those who tired of reading stories about double digit
price increases in real estate and jumped in. Unfortunately those
junior speculators may get their hands burned if they are over extended
and have to sell. And some of the lenders who financed such buying
excess may have to pop the property and be burned on the sale. Most of
us who sat on the sidelines won't be hurt. And some of us who are
interested in buying may find some real opportnities.

If you get the chance please look up a book written in 1848 by Charles
MacKay. It's been reprinted and quoted numerous times. "Memoirs of
Extraordinary Popular Delusions and the Madness of Crowds" details the
many speculative manias that occured over the centuries prior to 1848
including the well known dutch tulip craze. The tendency of the people
to follow the crowd continues to this day.

..even maroons in Holland Michigan.

How about the oranges, blues, greens, violets, purples, browns, greys, pinks, reds. (Hint...use the dictionary).

>
> (Or doesn't your feeble brain remember how bad the -country- got hurt
> when the "dot com" bubble went bust????)

Well, tell us exactly how badly the entire country got hurt by the dot com speculative mania. Please be precise.

The housing bubble will behave similarity. Those who have saved and
life an austere lifestyle will prosper most, as they will become the
vultures in the pennies on the dollar housing market. Real estate is
soooooo 2004....

> But I thought the topic was related to paying "too much", not selling. The

> after the bust.

How true.

>
> If the whole country gets hurt, how might we protect the innocent victims of
> these periodic busts? Perhaps punish those would sell "too cheap"?

Punish who sell "too cheap" is basically akin to living in a stalinist
society. Regrettably, this will likely happen and will result in even
slower sales, since opportunists will not be permitted into the market
and sellers will not be permitted to sell as they see fit. Price
caps/floors slow down transactions and do not allow legit sellers who
MUST leave their homes for job transfers, etc, to dump them. As a
result, abandonment and foreclosures of dwellings will rise
significantly. Actually, that works out even better for me, as
foreclosed homes are even cheaper than desperate homesellers! Yay
government intervention!

Yours In Christ,
John

The Voice of Islamic Justice (or something like that) broadcasts to
North America every day from 1:30 to 2:30 UTC on 7235 and 9495 mhz.
7235 is much better here on the east coast than 9495.

It brings back memories of listening to Radio Moscow in the 70s. VERY
anti-U.S. Also, they never refer to Israel - it's always "The Illegal
Zionist Entity Occupying Palestine".

A freebie pamplet I got at the Wal Mart store last week,
www.mississippihomes.com that is what it says on the front page.About three years ago,I used to subscribe to Time Warner cable tv.(I subscribe to DirecTV now) I used to click on a full time local Jackson area real estate tv channel.Some of those big fancy homes sell for a million dollars or more.Some older homes sell for much less.

About fourteen years ago,I bought a half acrea of land in Putnam County,Florida.Every once in a while I get snail mails from people wanting to know if I am interested in selling my half acre.It isn't for sale and it never will be as long as I am alive.When I croak,it goes to my sister.I get regular snail mail newsletters from www.sunbeltlandowners.com I got one last week.
Back in the 1960's,you could buy one acre parcels of land in Florida for one hundred dollars,I have some old Popular Science magazines here which date back to the 1960's,there are ads in the magazines about that.

[snip]

Let's not forget that the housing price run up has been good to homeowners who bought years ago and choose to sell or refinance now and it's also been good for people in the building trades.

I haven't given the subject of a housing market bubble much thought one way or the other. But I've seen the prices on various radios soar over the last few years, which seems odd given the way SW radio has declined. It's my suspicion that there's a bunch of older guys who are finally getting the radios they always wanted. They know that a few grand is alot of money, but that few grand now comes alot easier than a few hundred did back in the fifties.

There's a bunch of radios which have sold for alot more than I would have paid. So what! To me, they're just radios. But to some buyer, they might be much more than just radios. Those radios might be a dream fufilled. How can any outsider call that buying stupid?

I also wouldn't be suprised if there's some greedy investor types who are trying make alot of money. Who will be buying those radios in the future? The old guys will have the radios they want or they'll be gone and nearly all the kids will find radios totally uninteresting. And for the "investors" who have no interest in radio, buying stupid will be it's own punishment.

> that might as well been down at the mall it was so far.

I believe the admission prices at Dayton are largely driven by the "going rate" for the Hara Arena; renting large spaces like that is *quite* expensive. The prices are certainly not high compared to similarly sized non-amateur conventions I've attended.

The handicapped parking largely seems to be an issue because *so many* people request it these days; it's impossible to have literally 300 handcapped parking spots *all* close to the door. I agree that you're probably better off parking in a handcapped spot at the mall and riding the shuttle bus.

I believe that for hamfests to continue being successful, they're going to have to concentrate more on educational seminars, demonstrations, and events (transmitter hunts, contests, etc.) rather than just a swapmeet.

I think it's a often sign of trouble when any organization seems to spend an inordinate amount of time worrying about their own numbers rather than just engaging in what it is that brought them together in the first place and letting the membership numbers drive themselves. Ham radio (or at least the ARRL) seem quite preoccupied with membership levels...

> My wireless home phone and my computer
> has more MHZ than my radio now. ;-(

:-) Yeah, I know what you mean. To some degree FCC regulations have held back the development of amateur radio, but on the other hand the number of amateurs out there who could successfully *design* or even *assemble* something similar in complexity to a cell phone is miniscule.

Parts availability today is, in many cases, far better than ever before. Mouser and DigiKey are real treasure troves of inexpensive RF parts, you know in the click of a mouse what the stock status is, and they deliver quickly.

Oh boy! I haven't done that in a long time, but I almost think you have to pull the DR7 board to get to it. Easy enough I suppose but if you've never done it before then you might have a bit of hesitation yanking that board.

If I get a chance and no one else responds I'll pull the cover on my R7 and take a look see.

Isn't that,maybe the beer I drink does it to my ears.My little doggy only drinks fresh tap water,(and eats Natural Choice dog food www.nutroproducts.com $20.00 per twenty pound bag and every eleventh bag is free,and I always save a few spoonfulls of whatever I eat for her and let her clean the plate) I change the water out several times every day.And she isn't a stupid French poodle dog.

Always good to limit one's exposure to overly loud sounds.. but one must
also remember that there is natural loss of high frequencies as we age.
Teenagers are taking advantage of this fact now with their 17KHz ringtone,
which the average person over 30 cannot hear.

Boesch gives it pretty good comments on his website. My guess is that it will perform pretty darned well for a 30 year old large luggable with electronics to match. It probably will not outperform many newer tabletop sets and as we all know it will be decidedly slower to tune around on. Still it is an attractive looking radio that I'm sure sounds very good and would be a blast to use.

But I enjoy tuning around on oldies like Panasonic RF5000, Kenwood R300 and old Lafayette kit radios. I'm not ready to pay ther collector prices such a radio commands because I'm not a collector. I want to use my radios.

Not much! barely moved the meter. I lost them at 1938 today. Didn't hear them until almost 2000 yesterday and had them up until about the time they went off at 2100.

I've not heard a definitive ID on this one yet, but everything seems to fit. Maybe tomorrow I'll actually put the cans on and give a good listen.

O, I just turned up the volume, and they are back! Had it down as I was on 2 meters yakking.

Oh yeah, supposedly they operate from 1800-2100 M-F on 15476. Prior to 1900 though they are pretty well blocked, at least here, by Africa No. 1 on 15475.

We're going to need a draft if things keep up as they are. One day they're pulling for a "pull out" of Iraq, now I'm hearing we're in it for the LONG haul because of all the civil unrest, etc. Yep - another Vietnam. At least in that respect - Saddam Hussein was right......

And just WHERE are those "Weapons of Mass Destruction" we went in there to find - the initial cause of the war? Seems to me, someone screwed up. Either our "intelligence" wasn't so freaking intelligent OR the man named Bush - LIED. IF they'd have left Schwarzkoptf (sp?) finish the job, we probably wouldn't be there now. That is a prime example of our leaders handcuffing the military. If you're going to war - SHOW NO MERCY. Patton is probably rolling over in his grave at the mockery. The enemy plays by NO rules, so why the hell do WE?

Yeah man, with Iraq, Afghanistan, Iran, N. Korea all bubbling to a boil, the shit could really hit the fan. A draft would have to bring in LOTS of people to deal with that. Christ, they'll have to re-enlist the veterans who've been out for a while - even those crippled by bombs, etc - to maintain equipment to their ability. They won't have time to train new people to do much more than shoot a gun.

Just my 2 cents.

L.

Since Congress saw the very same intelligence - and then voted for the
war - that means the intelligence wasn't so freaking intelligent!

If "Bush LIED" then all of Congress LIED also. Everyone seems to
conveniently forget this.

Some of those Cajuns talk a little differently too.In New Orleans they pronounce Royal Street as Riyal Street.(Royal Street in Vieux Carrie,the French Quarter) (sometimes spelled Vieux Carre) Amite,Louisiana is pronounced as Ameet.There is an Amite Street in down town Jackson and us Jacksonians pronounce it is Amit (without the e) Street.If y'all want some real good music to listen to,get ahold of some Cajun Music.

Please tell us where you teach; I'm sure the parents of the students would be interested to know that their child's teacher would kill somebody for taking a carrot.

> How is someone like myself affected by the housing bubble, except that
> it provides me the ability to get RE on the cheap?

Yup, true-- people have always been able to make money off of the misfortune or stupidity of others.

> Yours In Christ,
> John

Seeing as -you- brought it up, what do you think Christ would say about you shooting and/or killing someone over a few lousy vegetables and who was only trying to feed his starving family? Hmmmm?

P.S. Ya gotta be kidding, right? Ya really wouldn't kill somebody for taking a carrot? That really doesn't sound very "Christian" of you.

i have 3 sangean ats 818 radios. (rs dx390) one stone deaf,one half deaf and one a red hot rocket. as a matter of fact the red hot one is TOO HOT! it overloads at nothing at all with images all over the place. good thing it has rf gain control. the two deaf ones have both had the front end fet replaced. three different transistors were tried in the completely deaf one to no avail! i had rat shack do the repair the first time to the tune of $60. it came back with four screws missing and full of crud and greasy fingerprints inside, and still completely deaf. now i wouldnt let rat shack repair a dead battery! i guess that my point is that the build quality at sangean can be hit and miss. (even though my two ats 606 /dx399 radios couldnt be more perfect!)

Let's keep the CB'ers on CB.

1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

4: Make the no-code license one year non-renewable.

Tnx, 73

In my case I road a motorcycle for 25 years and that didn't help.

Given that I always have several receivers running, and am constantly
testing
new everythings, detectors, filters amplifiers etc, I have managed to
connect
to a receiver that is running way too high an audio level several
times. And
the two worst events are when the people next door use their food
blender,
a noise source from hell, and when an amplifier that had been stable
for years
decided to turn into a loud CPO. 5 Watts of audio is a little loud via
the
headphones.

I also use something similar with my Minimus 7 speakers after blowing a
"woofer", somehow a 4" driver just doesn't feel like a woofer, when I
got a
little distracted and fed 40W of white noise into it. It was only
painfull for a
moment.

Years ago a friend got the bright idea to connect his El Cheapo Tandy
stereo headset to his Marshall guitar amp. He didn't know that the
typical HiFi has a ~200 ohm resistor in series so he fired up the amp,
put the phones on and played a lick. Called me to complain about
how low the volume was. I went over and found the back of the
earphones discolored from the heat of the fried little speakers. He
was very lucky, God does sometimes look out for fools and children.
His amp was rated at something like 400W. And it had 4 pairs of
push pull output tubes.

I can remember what TV horizontal output transformers sounded like,
from maybe 25 years ago. I don't know if they are still as noisy. A

local
swanky clothing store had egg frier ultrasonic intrusoin detector that
used to hurt when I walked in. I dpn't miss 15K and up but I really
miss
the 8 to 10K range.

Terry

SC,it sounds like a few days ago in another thread you said my house sucks.
Really though,I am not going to be guessing at what causes my tinnitus.(if in fact that is what it is) Sooner or later I will go to the G.V. ''Sonny'' Montgomery VA Medical Center on Woodrow Wilson Blvd and let them check it out.Or I might go to Dr.Harrison's Ear Nose and Throat Clinic in down town Jackson.That is where I went the day after Tuesday just before Christmas last year.

Of course if I go to the VA Center,I might as well get some free blue and green and brown contact lenses too for whenever I get to dressing up like a woman.

NTSC sets are still just as bad as ever. Our daughter keeps asking me to turn off the monitor I use in our inhouse CATV system because it drives her insane (not much of a drive, you ask me... she's going to be 21 next month, and sits in her room playing online games and chatting on Skype all day/night.. LOL)

I'm pretty sure the most powerful Marshall tube amp was 200 Watts.

I'm in the same boat. I live in a location that's far from ideal when
it comes to DX. However, I find it hard to get a fix on just how bad it
is. The amount of ambient noise I measure with an s-meter varies
dramatically with the band, time of day...even the antenna I'm using.
It's hard to get a fix on how it all averages out...though I'm sure it
ain't great. At the same time, it's interesting to check out the Salt
Lake City receiver on the www.smeter.net site because, in addition to
audio, it displays an s-meter. I'd expect that location in Utah to be a
heck of a lot quieter than mine here in NY, but it isn't if you only
compare s-meter readings. I realize these kinds of comparisons are
tricky, though, as different locations can have not only varying
degrees but also different kinds of noise.

That is a nice catch if it's LRA36. I'll have to listen for them over
the next few days, but they may be out of reach for me. There are times
when I'd give my right arm for a spot that's as quiet as yours! I
remember you also noting from time to time that you were hearing
Bangkok Meteorological Radio....I've never been able to hear them,
despite many attempts. Probably just too much noise at my location.

Steve

> Good riddance.

In the past, the company did very well, even though the products and service were costly they were of the highest quality. Once the founder, Mr. Morita, passed away, the company became very poorly managed -left to bean counters and lawyers who had no concept of the value of a tradition of quality products or service. They made sweeping changes they would not have dared to make while Morita-San was alive. Parts in machines that had previously been cast or machined became stamped. Machined brass or aluminum bosses holding mechanism guides and supports to a mechanism baseplate became molded-in nylon strips and thin sheets with little threaded and even -perish the though- press-fit bosses on them. Yes, press-fit metal into nylon. Service quality also became secondary to profit. That is, the service organization was no longer permitted to break even in order to provide high value service, and the profit-center model they implemented caused the quality of service to drop severely, even as they raised the hourly rate to $150 (broadcast) and cheaply hired inexperienced technicians right out of a 2-year course DeVry to work on broadcast video gear. People I would not let loose on a CD palyer. Their excuse was "hire from a diverse pool" but in reality that was not done. We called them 20-20's because they were 20 years old and made $20K/Yr

-and they really had no concept of the fundamental theory behind most of the equipment they worked on. I mean these guys could not tell you the difference between a balanced and unbalanced signal, or why it was important. Service center managers expected us 'old' guys to train them, but the immaturity, laziness, and impatience of such folk won out as time and time again the rework would come back. Customers would say that Sony service was becoming no better than Panasonic's, a huge insult previously, but it became close to the truth. The profit sharing plan dried up as the hungry new 'hollywood' branch of the company, a gigantic business error, sucked up money faster than a new york coke prostitue. They were paying Michael Jackson's salary for a while too. It was a mess, and the spiral to destruction was not slow, and is probably now irreversible. I left Sony when they decided to consolidate alll service to one location and they offered me the "opportunity" to move to Norcross GA (Atlanta) and work in a 24-hour sweatshop, er.. hot-seat repair center. In the current center, I was in charge of a 12x30 area with three 7' racks, a desk, computer, phone, and workbench, with maybe $250K worh of test gear, and that is where I did my repairs. I worked on high end NTSC and HDTV digital broadcast and production products. Nothing I worked on cost less than $5000 and most of it was in the 20K range. That was the level of responsibility. The new place would have me coming in to a seat still warm from someone's butt every morning, sharing a drawer full of possibly nasty hand tools and maybe some potato chip crumbs, in a short workbench with no desk, no racks and only a couple pieces of test gear, working on cheap VHS or 8mm video tape recorders with two other people, and no computer or phone, all assholes and elbows, butts to nuts with 300 other people in the huge room, the hillbilly boss staring down from his loft on the second floor, deciding which slave to beat. (we sent spies in ahead to check on this) That is what they did to the service department and it is why Sony service sucks now and why the products are not what they were. I could go on, but there's no point. I think that was the best thing that Sony ever did for us experienced people, shutting down the regional service centers. Really gave our carreers a boost when we changed Jobs. Sony on your resume used to mean something then. I wonder if it does now?

> prices slowing down.

First, I sincerely hope it just "slows down", not collapses.

Next, it's intuitively obvious and I shouldn't have to explain to you why a bust is a bad thing for the economy...but on a very simplistic basis, try this on for size: People buy a large house, too big for their needs (stupidity, greed or both), the bottom falls out of the real estate market, the bank repossesses, the stupid/greedy original buyers now homeless, have to go on welfare, thus driving up taxes for the rest of us. Just one of hundreds or thousands of possible scenarios why a bubble bursting is bad for the country in general.

Another fairly obvious scenario is that there will be a -lot- of repossessed houses on the market, causing the real estate market to stagnate, with related ripple effects (and yes, a -few- will profit from the misfortune and/or stupidity of others). Unfortunately though, the major portion of the people in this country are in debt up to their eyeballs, have a zero % or negative rate of savings and a major bubble going bust could push everything over the edge.

> The only crowd to get burned in this speculative madness will be those
> who got in late.

Sorry, Jack--I don't buy that. Very naive of you. That's like saying a
Ponzi (pyramid) scheme is good for the early but bad for the latecomers.
I believe the Ponzi scam/scheme is ultimately going to be bad for
-everybody-, all the time, every time, early or late.

> Those who tired of reading stories about double digit

> and have to sell. And some of the lenders who financed such buying
> excess may have to pop the property and be burned on the sale. Most of
> us who sat on the sidelines won't be hurt.

True, but still very short-sighted of you; see above. Also true that
"most of you" who are savers won't be hurt. Unfortunately, the "most of
you" that are savers with minimal or no debt are a very, very small
minority. Again, a large portion of this country is in debt up to their
eyeballs and beyond.

> And some of us who are
> interested in buying may find some real opportnities.

Absolutely true.

> If you get the chance please look up a book written in 1848 by Charles
> MacKay. It's been reprinted and quoted numerous times. "Memoirs of
> Extraordinary Popular Delusions and the Madness of Crowds" details the
> many speculative manias that occured over the centuries prior to 1848
> including the well known dutch tulip craze.

Forgive me if I don't look it up but I have read in other places of the
Tulip craze, the "South Seas" bubble, etc.

> The tendency of the people
> to follow the crowd continues to this day.

Must be why, even today, they are known as "sheeple".

> ..even maroons in Holland Michigan.
>
> How about the oranges, blues, greens, violets, purples, browns, greys,
> pinks, reds. (Hint...use the dictionary).

Hint... please try not to be so cryptic. "Maroon" was a word play on
"moron", not talking about the tulips in Holland nor referring to the
"Tulip craze".

>> (Or doesn't your feeble brain remember how bad the -country- got hurt
>> when the "dot com" bubble went bust????)
>
> Well, tell us exactly how badly the entire country got hurt by the dot
> com speculative mania. Please be precise.

Please do your own research. It has been well written up in ALL the media.

BY DEFINITION, when a bubble bursts, it is bad for the economy and therefore bad for a large portion of the populace, especially a populace like ours that is so very deeply in debt.

The real issue here is why you think a bubble bursting wouldn't hurt the country.

Whats to forget? THE WHOLE FREAKING THING WAS A LIE. Doesn't matter WHO "started" it or "supported" it. FACT IS - we've got 2000 plus dead soldiers now due to this LIE. A LIE IS A LIE IS A LIE - no matter how started or allowed to go on. BUSH, CONGRESS, whoever - ALL are responsible for this Travisty. THEY ALL have to accept blame - after all, THEY are in command. AND if our so called intelligence isn't so intelligent, then maybe we should look a tad harder before going into a war. Hussien made an ass of all of them. Maybe he did wrong and he's on trial now for it, but he WAS right!

No - Saddam was "right" - I'm referring to his description of another Viet nam for US. He was right on the money. It has been a very close call - maybe not in all ways, but with the way it is dragging on and our people getting killed. IT IS POINTLESS. Those ass holes down there have been fighting for hundreds or thousands of years, do you REALLY think WE are going to bring peace there in a couple? HELL NO. THIS WAR didn't have to be. AGAIN - when DADDY BUSH was in power - had he allowed Norman to finish the job, Saddam wouldn't have had this second go round. So - BUSHES fucked up..... 9/11 wasn't done by Saddam, it was done by a low life - yellow bellied - son of a bitch with vacuum lips from sucking too many dongs - who hides in caves - gutless to come out in the open. I WILL give Bush credit for NOT hiding. Maybe Saddam was doing wrong in some views = far be it from me to say he was doing right, but he seemed to be keeping control - right or wrong. You didn't have all this bull shit there is now - with all of them fighting each other. The Kurds, Shiites, and whoever else it is. We have to be crazy to think WE are going to solve that mess. it hasn't worked in a year - so tell me - just HOW many more years should we stay there and how many more have to die for it? IF you like that "war" so much, why don't YOU volunteer?

Oh and the WMD - Since we went in under false pretenses of him having them, just what the hell do you think we would have done with definate finds? THE SAME DAMNED THING! So HIS threats 0r ploys didn't do a damned thing. THEY AGREED WITH YOU? GIVE ME A BREAK..... They don't agree with US. YOU AND I are peons in their eyes, they don't give a shit what WE think. All we're good for is paying for their damned perks..... and dying for their causes.

WE NEEDED A WAR? Man that is one sick thought..... what the fuck are you smoking?

If you/they are listening to the mp3 that's circulating of the ringtone,
you're not hearing the ringtone. You're hearing a bunch of lower frequency
artifacts in the mp3. The chief one being around 3300Hz, well within most
anyone's range of hearing. Once those artifacts are filtered out, the actual
ringtone is indistinguishable for most everyone over 30.

I found it very amusing that this all went down with
Sony on the same day that the IAU downsized the
Solar System from 9 to 8 Planets.

: (I feel sorry for Pluto. : (

"RESOLUTION 5A"

The IAU therefore resolves that planets
and other bodies in our Solar System be
defined into three distinct categories in the following way:

(1) A planet is a celestial body that (a) is in orbit
around the Sun, (b) has sufficient mass for its
self-gravity to overcome rigid body forces so
that it assumes a hydrostatic equilibrium (nearly round)
shape, and (c) has cleared the neighbourhood around its orbit.

(2) A dwarf planet is a celestial body that (a) is in orbit
around the Sun, (b) has sufficient mass for its self-gravity
to overcome rigid body forces so that it assumes
a hydrostatic equilibrium (nearly round) shape, (c) has not
cleared the neighbourhood around its orbit, and (d) is not a satellite.

(...I know more than a few drunks at the local Am Legion Post who could
qualify for the above after they've had a few shots and beers in them -
grin)

I don't know what this world is commin to cuhulin!

Consider that this Sony battery stuff all went down on
the same day that the IAU de-listed Pluto as a Planet.

http://news.bbc.co.uk/2/hi/science/nature/5282440.stm

How's that for curious timing eh?? Wonder what Alex
Jones and Joyce Reilly/Dave Vonkleist will have to say
about this on shortwave tomorrow! I'd really love to hear
what James Lloyd has to say from out in Oregon on all
of this, but Radio Miami comes in at an S-2 he at best.

I really miss hearing ole Laughing James and his barking chickens.....

(Note: There is NO confirmation yet that Texe Marrs said that the
de-listing of Pluto as a Planet, along with the moving of the
100 foot tall monument of Ramseys-II in Egypt back to the
Giza Plains from the Museum of Egyptology today is imminent
proof of the appearance of the antichrist.......)

>
> L.

Saddam may have been doing wrong by his actions (going according to the bs fed to us) - but even with keeping them suppressed - however it was done - he did have control. We took him out of power and all hell has broken loose and we have ZERO ideas for ending it or getting the hell out. Now WE are stuck with the mess WE created by going in and sticking our nose where it didn't belong. I'm willing to bet, though his ass is in the sling now - he is laughing his ass off knowing what we have to deal with. Unless we can clean this mess up - HE WON. IF we were "just" fighting the Al-Quaida, that is one thing. But - we're fighting them, and the other 3 (the Sunni's I forgot before); they're fighting amongst each other for power and fighting us as well for now being there. WE ARE IN A HORNETS NEST AND IT IS ACTIVATED. Those desert rats don't play by rules. Unfortunately, we do..... If you're going to fight a war - FIGHT IT with all you have. You have no time to be picking and choosing who you'll shoot or not. IT IS KILL OR BE KILLED. OUR people having to play by the rules are getting killed.

SO, again I ask you - we "needed" this war? Have YOU ever been in the military? Do you serve in any other capacity in the name of "Defense"? I have been and I DO. A few of my friends and relatives have been to Iraq - a couple still are there, one is still in Afghanistan - has been for 2 years - minus a 30 day break. SO don't go spouting off about how we needed this war. THAT IS AS SICK AS YOU CAN GET. Say that to the parents, husbands, wives, Children old enough to understand who they've lost - of those who have lost family to this mockery.

Again, I SUPPORT the troops, I DO NOT support the fucking lie that put them there. YES, they are trained to fight and accept they may be killed. But again, this was for NOTHING.

I see you picked on quite a bit in here, NOW I KNOW WHY..... Cease and Desist you say? You ought to take your own advice and keep your mouth shut of things you are clueless about. You made your bed, now you have to lay in it. They've got your number. The best way for you to get them to stop - is to stop yourself. Apparently you've not learned that.

IF you're young enough, why not prove you're a real man - volunteer to go fight that war that you feel we "needed". DO THAT and maybe you'll have some credibility. IF you can't do that - then don't spout off with us as to what we "needed". WE don't need the likes of you deciding whether a war is needed. Hell, you can't even win a battle on here without crying foul and you think you can conceive a reason for a useless war? Hahahahaha.....

Tell me - if Bush was so RIGHT - how come his popularity dipped to below 50%? It may have risen since then, I'm not up on the last reading, but THE

WAR CAUSED IT TO DIP. People are tired of IT and being lied to about it. And to answer a point the other guy made - YES - ALL of them ought to be held accountable. BUT in this case, since the poll is only about Bush, I'm using him as the example. Bush isn't the only one at fault here, but HE had a choice to make and he made it - A BAD ONE - for Iraq. I WILL agree with Afghanistan since those ass holes were into the 9/11 deal. We should have finished THAT first if we "needed" to get into another. WE're spread pretty thin and if N. Korea and Iran decide to start acting up, maybe even the likes of you will be drafted to help fight those wars..... I'm glad I don't live close to you - I'd hate to smell the shit which will be running down your legs if you are drafted. Tell the draft board to cease and desist..... HAHAHAHA.....
Are you going to tell the N. Koreans or Iranians aiming guns at you to cease and desist? ROFLMAO.....

Go away little boy..... We're not playing with little plastic soldiers who can come back for another war time after time after time. REAL LIVES are being lost for NOTHING..... Oh yeah, I'd LOVE to see you tell those survivors we "needed" this war..... Man, you'd be tarred and feathered in a heart beat.

I've had mine apart when I was updating it. If you remove the
bandswitch/preselector range knob, the two black plastic side panels, and
the two screws on each side of the front panel that hold it to the chassis,
you can tilt the front panel enough to get at that light bulb.
If you use this same technique, it becomes much easier if you ever have to
pull out that DR-7 board. I used to always bend and tilt that DR-7 board
until I figured out this "lazy" way.

I'll make a note of that method, Pete. Sounds like that would make it a bit
easier.

That's what you get for working in lala land (i.e. dot com land).
While you were out investing in .com stock and investing your career in
them, I worked defense, bought real estate, and pursued my Ph. D.
Suffice to say, I likely won't have to worry about work for the rest of
my life. I'm sure 1999 was really good to you though.

Yours In Chirst,
John

Jesus would say that I'm in the right, BIG TIME. Jesus would say thank
you for doing my part to prevent our world from turning into a
communist shit land.

> P.S. Ya gotta be kidding, right? Ya really wouldn't kill somebody for
> taking a carrot? That really doesn't sound very "Christian" of you.

The point is, there will be a LOT of starving people after RE bubble
burs,t peak oil, etc taking hold. I will regrettably have to kill
many. But, there's plenty of ammunition. God will grant me the speed
and accuracy to slay thieving lowlifes. I have faith in this.

Care to armchair quarterback some more?

Yours In Christ,
John

This was in the winter of 73/74. It has just been too darn long.

I think dxace called it when he mentioned stereo.

While I had a Strat at the time, I was more into acousitc guitar.

I still have my home made 6L6 guitar amp. Somehow I traded for
an output transformer from a large electic organ and my Amp was
popular with a couple of bass players. I even added a 1/4 jack
to my GR64 so I could use it as a practice amp. A single 6AQ7
driving an old 12" dynamic speaker. I used my TTY loop to power
the dynamic speaker electromagnet. The fun old days.

Hey yourself. Now you are answering your own posts?

Everything I had to say about HD I said. There are 2000 stations on or
committed to go on, a $200,000,000 HD radio campaign that started this
month, and less expensive receivers in the channels. There is little or no
interference to anything anyone listens to, and AM is probably dead anyway
(KTAR in Phoenix joined the death march, announcing yesterday its move to FM
only in 5 months, while KGO in San Francisco is now not even int he top 10
25-54 for the first time in over 25 years.)

Keep on posting false data, spamming Amazon reviews. You are one against a
legion.

> bubble bursting is bad for the country in general.

You have avoided telling us exactly how the "entire country" (your
words) will be hurt by a slowdown or even downturn in real estate
prices. Please tell us precisely how the entire country will be hurt.

Remember entire country means just that...each and every person,
business and governmental unit.

>
> Another fairly obvious scenario is that there will be a -lot- of
> repossessed houses on the market, causing the real estate market to
> stagnate, with related ripple effects (and yes, a -few- will profit from
> the misfortune and/or stupidity of others).

To the extent that those who bought with the intent of flippping, yes
there will be some losses taken by purchasers as well as lenders who
have to pop the house. But even if I bought the house 6 months before
the downturn if my intent is to use it as a home then I suffer no loss
and the lender gets his money every month. Many more of the purchases
are for occupancy, not flipping.

> Unfortunately though, the
> major portion of the people in this country are in debt up to their

> going bust could push everything over the edge.

What is your source for this information. I've been in banking for the
past 30 years and cannot find a citation that says "a major portion"
presumably at least 50% of homwowners have those kinds of financial
problems. Please give us a specific citation.

>
> > The only crowd to get burned in this speculative madness will be those

> I believe the Ponzi scam/scheme is ultimately going to be bad for
> -everybody-, all the time, every time, early or late.

You need to look up the definitions of ponzi scheme, pyramids, etc
before throwing them around. You look like a fool by using them
inappropriately here.

But to follow up on your statement, how does the homeowner who
purchased early in this housing cycle get burned. All he has to do is
do as others have - continue to use the house as a home and make the
payments.

>

> eyeballs and beyond.

Again, where is your citation that a large proportion, presumably a
number well above 50% of the residents of this country are in debt to
unmannageable proportions. Please provide a specific citation. I'm
interested because I've been in banking for over 30 years.

>

>
> Forgive me if I don't look it up but I have read in other places of the
> Tulip craze, the "South Seas" bubble, etc.

You are missing the point - speculative manias have happened and will
continue to happen. They happened with real estate over and over and
over. Go back 30 years to the crunch in the 1970's, move forward to
the 1980's, etc. None of those speculative runups are new and in each
and every instance the most of the country survived just fine. It is
instructive in MacKay's book that in each and every of the speculative
manias documented over the centuries those who were greedy late in the
cycle usually got burned the worst. As it will happen with this real
estate cycle.

I lived first hand through the dot com experience. Both in banking and
as participant in the dot com business. Please provide a specific
citation that shows the "entire country" and not just a small portion
of it was hurt by the dot com bubble bursting. You appear to be good a
creating sensational statements, but back away quickly when asked to
provide any substantiation for them. WHERE did you get this nonsense.

3240. Chinese Fear Post-Castro Breakdown

Newsgroup: rec.radio.shortwave
Date: 2006-08-25 15:40:43 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12eu6fhbpu12qed@corp.supernews.com>
Source record: 89552

Chinese Fear Post-Castro Breakdown

Chinese intelligence is biting its fingernails over the prospect of Fidel Castro's demise in Cuba.

Hand-picked as the successor to his brother Fidel, Raul Castro is rightly known as the "Chinaman." Ever since he visited China in 1997 he has been unstinting in his praise for the Beijing government and has played a key role in recent years in turning his island into a China-type bastion.

But according to Intelligence Online sources in Beijing, leaders of the People's Liberation Army (PLA) and, even more, the intelligence agencies are worried about what they might lose if the Havana regime collapses.

This would include a major base for intercepting communications at Lourdes which was taken over from Russia's GRU by the 3rd Bureau (Zongcan Sanbu) answering to the PLA's general staff and headed by Qiu Rulin; a transmission station operated on conjunction with Cuba's Direccion General de Inteligencia (DGI) at the Bejucal intelligence base; a listening post at Jeruco some 50 km east of the complex at Lourdes; a Sino-Cuban intelligence liaison and transmission center in Havana; and, lastly, a hub for Humint exchanges between the DGI, which is lead by general Eduardo Delgado Rodriguez, and the 2nd Bureau of China's state security department (Goanbu) run by Zhan Yongjie.

In addition, the PLA's naval forces would lose a base on Pinetree Island, where some of their spy ships put in. They would also be denied a naval base at Cienfuegos, which would enable Chinese submarines to pose a direct threat to the U.S. in the case of conflict (over Taiwan, for instance).

The Lider Maximo's health problems in recent times haven't prevented major Chinese delegations from visiting Havana. The most significant trip took place in March when eight Chinese generals, including lieutenant-general Peng Xiaofeng, the political commissar of the Second Artillery Force (Di Er Pao Ping) and his chief of staff, lieutenant-general Yu Jixum, were received by the Cuban chief-of-staff, Alvaro Lopez Miera.

At the time the CIA submitted a report to president George W. Bush stating that the Second Artillery Force was in charge of China's ballistic missiles and wondering whether Beijing would supply Cuba with imported missiles or help it design them on the island. Meanwhile, the Institute of Contemporary International Relations, an organization linked to Guoanbu, recently drew up a scenario on Castro's death that compared it with the demise of hardliner Enver Hoxha in Albania and his replacement by the reform-minded communist Ramiz Alia.

But it is not clear whether the Chinese also examined what subsequently happened in Albania after Hoxha's death: the collapse of communism and a takeover of the country by former Sigurimi secret service men (trained by the Chinese) and organized crime.

Devoted to afflicting the comfortable and comforting the afflicted, the various pundits listed are following a noble muck-raking tradition in a Paul Revere mode. They are thought-provoking and provide an alternative to the mass media. Enquiring minds want to know, " Are we really heading to hell in a handbasket?", "Are we doomed?" For the answers to these and other questions, here follows a list (not inclusive) of 6 dissident voices heard on shortwave (times eastern): RADIO LIBERTY, Stan Monteith, 6pm-8pm 9840; 11pm-1am 5860, 7520; FLIPSIDE, Robby Noel, 8pm-9pm 12180, 7490; INFOWARS, Alex Jones, noon-2pm 9985, 10pm-12am 5765-3215; THE POWER HOUR, Dave and Joyce, 8am-10am,7465, 8am-11am 12180, 10am-11am 9985, 10pm-12am 6890, 12pm-1am 6050; FOR THE PEOPLE, Chuck Harder, 3pm-4pm 12160; BO Gritz, 5pm-6pm 7385. For radios with many memories, it may be more convenient to punch in the above frequencies and just run through them. You will likely find someone at any given time. The frequencies are: 12180, 12160, 9985, 9840, 7520, 7490, 7465, 7385, 6890, 6050, 5860, 5765, 3215.

Same experience here. There are times of day and bands where the RFI waxes and wanes, and sometimes conditions are right for the really weak stuff to make it on through anyhow. It is a very unusual day, though, when the noise level is flat and the weak stuff becomes routine. By routine I mean not necessarily easy copy, but *there at all*.

Usually, when my S-meter reading is low, it means that conditions on that band at that time are just poor. Often, conditions can be poor and the S-meter reading can still be high, and I attribute this to local garbage mostly. When I lived in rural New England, this latter condition never exisited...much more common here in the City.

One of these days I'm going to go to battery power for the RX, and I have a hunch that this switch will help considerably. That, and getting the local 50kw AM sloppers to clean up their acts (their harmonics on frequency multiples are just harrowing). If all else fails, I will move to rural Wyoming/Idaho and solve a whole bunch of urban-related problems all at once.

Chinese Fear Post-Castro Breakdown

Chinese intelligence is biting its fingernails over the prospect of Fidel Castro's demise in Cuba.

Hand-picked as the successor to his brother Fidel, Raul Castro is rightly known as the "Chinaman." Ever since he visited China in 1997 he has been unstinting in his praise for the Beijing government and has played a key role in recent years in turning his island into a China-type bastion.

But according to Intelligence Online sources in Beijing, leaders of the People's Liberation Army (PLA) and, even more, the intelligence agencies are worried about what they might lose if the Havana regime collapses.

This would include a major base for intercepting communications at Lourdes which was taken over from Russia's GRU by the 3rd Bureau (Zongcan Sanbu) answering to the PLA's general staff and headed by Qiu Rulin; a transmission station operated on conjunction with Cuba's Direccion General de Inteligencia (DGI) at the Bejucal intelligence base; a listening post at Jeruco some 50 km east of the complex at Lourdes; a Sino-Cuban intelligence liaison and transmission center in Havana; and, lastly, a hub for Humint exchanges between the DGI, which is lead by general Eduardo Delgado Rodriguez, and the 2nd Bureau of China's state security department (Goanbu) run by Zhan Yongjie.

In addition, the PLA's naval forces would lose a base on Pinetree Island, where some of their spy ships put in. They would also be denied a naval base at Cienfuegos, which would enable Chinese submarines to pose a direct threat to the U.S. in the case of conflict (over Taiwan, for instance).

The Lider Maximo's health problems in recent times haven't prevented major Chinese delegations from visiting Havana. The most significant trip took place in March when eight Chinese generals, including lieutenant-general Peng Xiaofeng, the political commissar of the Second Artillery Force (Di Er Pao Ping) and his chief of staff, lieutenant-general Yu Jixum, were received by the Cuban chief-of-staff, Alvaro Lopez Miera.

At the time the CIA submitted a report to president George W. Bush stating that the Second Artillery Force was in charge of China's ballistic missiles and wondering whether Beijing would supply Cuba with imported missiles or help it design them on the island. Meanwhile, the Institute of Contemporary International Relations, an organization linked to Guoanbu, recently drew up a scenario on Castro's death that compared it with the demise of hardliner Enver Hoxha in Albania and his replacement by the reform-minded communist Ramiz Alia.

But it is not clear whether the Chinese also examined what subsequently happened in Albania after Hoxha's death: the collapse of communism and a takeover of the country by former Sigurimi secret service men (trained by the Chinese) and organized crime.

^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

Hey you, don't joke about that, it is ALREADY happening in NJ
and PA and DE!! The Delaware River Port Authority operates
five (count'em... --> 5 <--) bridges in the SEPA Region.

They are: The Ben Franklin, The Walt Whitman, The Tacony-Palmyra,
The Commodore Barry and the Betsy Ross Bridges.

ALL 5 of these bridges were built in the period 1920 thru 1939.
They have all been PAID OFF since 1949. They still collect
tolls on them however, last I saw it was $3 cash only - NO PENNIES.

About 1 Million cars PER DAY go thru the tolls - do the math......!

http://www.drpa.org/drpa/drpa_bridges.html

So you see, we ALREADY ARE and HAVE BEEN paying for
bridges here in NJ for quite some time already! (please don't give
them any new ideas either, the DRPA Commissioner, a 'political
appointee' position I may add, currently pays $1.4M Salary + Bonus
per year and full pension after 20 years 'service'.)

What a cash cow.

I thought that variation over the course of a day in which bands are noisy and which aren't was just inescapable and largely a function of atmospheric noise. Sounds like I should try rural New England! I used to live in Nevada, outside of Reno, fairly far removed from sources of RFI, but found things to be not much better there than they are for me now. Of course, Nevada probably counts as a "weak signal area". That may have contributed to my sense that things were 'noisy' in NV. And then there are all those neon signs on the casinos--the RFI from those probably travels all over the place.

Battery power does help. I sometimes run the Drake off a battery. Another thing that helps with the AM stations is a good high pass filter. I use the one from Kiwa, even though most of my receivers have solid front ends.

Halliburton fires all its Iranian employees

Regime-run news agency MEHR reported that the American company Halliburton recently instructed its branch offices both in Iran and other countries that they refrain from renewing their contracts with all employees of Iranian nationality. The management of this company has stated that they are unable to either employ or extended contracts with Iranian nationals and all those who are currently in the upper management employment echelons must settle their accounts for termination.

Turkey and Iran on Friday broke off talks on the construction of a gas pipeline linking Iranian gas fields to Europe.
http://www.iranfocus.com/modules/news/article.php?storyid=8287

One family's grab of the biggest oil and gas contracts in Iran

The regime-run site Aref news reports: "The biggest contracts in the history of the oil and gas industry have become a tug of war between certain families in the 9th administration of the Islamic revolution. Contract to export gas to China estimated at $100 billion has been transferred to Ali Khayr-Andeesh, the brother-in-law of Supreme advisor to Ahamdinejad, Hashemi-Samareh, via Ali Saeedlou, the regime's Operations Executive."

The contract entitled "NIOC LNG" is considered to be equal to two years of Iran's oil income.

Ali Khayr-Andeesh, who has no previous experience in the oil industry, had been in the contracting business of constructing residential buildings.

It is worth mentioning that Hashemi-Samareh and his 2 brothers each of who are Deputy to the office of industries and Deputy to minister of energy are the nephews to the vice president of the Islamic regime's parliament, Mohammad Reza Bahonar.

Good to hear about the battery aid. I have a Kiwa high-pass filter.
It obviously works - it drops the signals on the AM stations rather
dramatically, and helps a bit on the resulting intermod products - and
I use an attenuator as well. However, the HP Filter does not drop the
levels of the 2nd/3rd/4th/5th harmonics off their dirty transmitters,
as those actually radiate at the higher frequencies, which the HP
filter does not affect.

Thanks,
Bruce

...
The first of three advanced long-range air defense radar purchased from China last year are expected to arrive in Venezuela next month, and the Venezuelan military plans to buy as many as seven more JYL-1 radar by next year.
...
"Within the next two to three years, China will be able to offer integrated air defense systems, from satellites to [airborne warning and controls systems], to fighters and [surface-to-air missiles], and naval weapons"
...
China's sale of military equipment to Venezuela appears to contradict a pledge made by Beijing officials to the U.S. government earlier this year.
...
China informed the United States it is "not interested in political or military adventures" in Latin America and other developing areas of the world.

Recent efforts to entice China's government into joining the United States in helping promote global stability have failed, U.S. officials said. High-level U.S.-China talks aimed at promoting the concept of China joining the United States as a "stakeholder" in world affairs were rebuffed by the Chinese during recent talks with Deputy Secretary of State Robert B. Zoelleck.

There are also concerns that the close ties between Venezuela and Cuba will lead to covert arms supplies from China to Cuba through Venezuela.

China has delivered some military goods to Cuba since the 1990s, according to U.S. officials.

I haven't used the battery for a while. The antenna I usually use is a
Wellbrook, and I always figure that whatever benefit derives from
powering the receiver from a battery will be mitigated by having the
wellbrook plugged into an AC line. I guess I need to buy another
battery and an inverter.

Space Weather News for August 25, 2006
http://spaceweather.com

ANOTHER BACKWARD SUNSPOT: Evidence continues to mount that the next solar cycle is beginning. When one solar cycle gives way to another, the magnetic poles of sunspots reverse polarity. For the second time in less than a month, such a "backward sunspot" has appeared--and this time it's a big one. Get the full story with images at http://spaceweather.com

MORNING PLANETS: If you find yourself awake before dawn this weekend, either Saturday or Sunday, dash outside and look east. Venus and Saturn are having a close encounter. The two planets will be stationed just half-a-degree apart in the rosy glow of the rising sun. Suggestion: Take your binoculars out with you. Venus is intense, but Saturn is easily lost in the brightening dawn. Binoculars help, and both planets can be seen at once through typical optics. Visit http://spaceweather.com for sky maps.

On Fri, 25 Aug 2006 16:53:36 -0400, Mark@kb9rqz.com wrote:

The war, which continues in Iraq, is the culminating episode in the long 20th-century history of the rebellion of the colonized against the empires of the west: it is the story of Vietnam, Algeria and the Congo, of Nicaragua and the Lebanon, of Chilean guerrillas, Australian Aborigines and Celtic nationalists, of all the counter-cultural forces of the century past.

And to understand such an epochal struggle across the continents, we don't need to get exercised about weapons or mobile labs as possible causes. The reason for what happened lies in the nature of America's hegemony in 2004, the solitude of its self-understanding, the tragedy of its geographically enforced isolation, and the sum total of over a century of European, and especially British, meddling in the Middle East. The always invented cause is a throw-away prop to argument: it can come and go. But the reason was there long before the deeds of war. We did not need the Iraq war to happen to establish our knowledge of the nature of US power, and British collusion in that omnipotence.

This is why Iraq troubles the way we live now, and have lived for a long time. It is a call to self-examination and the national conscience, neither of which are natural ports of call for the breezy certitudes and quick collapses of British journalism.

No, we want your sorry ass to stay on CB. Better ham radio exams will
help. Let's keep the CB'ers on CB.

1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

4: Make the no-code license one year non-renewable.

the point of this drivel Iknow the hisory of the region well Saddam was
made dangerous by US and the saudis and the Kuwatis togther we had a
duty to deal with him when he got out of hand and attacked the
Kuwaitis.

since scation and over filght was not finshing the job and he was
refusing to honnor his agreements with us we had to go and shoot hi to
show that such defiance is intolerable.

we did that, so we won the war

we may win the peace or not. that battle is worth fighting, bt intime
we may and shia and sunni are crave each other up I have a duty to try
and prevent that but it may e beyond us

I have a better idea.

Lets require all Ham radio operators take an I.Q. test. Only upon passing the test would an operator be allowed Amateur privileges. A score of 130 would be required. This would eliminate 98% of hams and also eliminate overcrowding of the band.

The 98% of Amateurs who flunk would automatically be termed CBers. This shouldn't be a problem because 98% of Amateurs are nothing but self glorified CBers anyway. They just would never admit it.

Problem solved.

Hi:
I became interested in the character of Dr. Gene Scott after reading a post by the Professor on the WFMU blog. So I tuned in for an hour last night and would like to send a reception report to the Caribbean Beacon. Has anyone received a QSL from them recently? Can you help me with the postal address? All I've been able to come up with so far is

Caribbean Beacon
The Valley
Anguilla

Will that be enough to ensure delivery?

It's not that the radio has problems. Rather, it that the radio does
not perform well once you remove the red velvet.

The only people that will seriously get hurt are those that have mortgages/owe money. Esp adjustable or interest-only mortgages.

I purposely bought a small house that I could afford to pay cash for. Five years ago, people told me I was nuts, didn't I want to make appreciation money on the biggest house I could afford?

No. I refused to be buried in debt. As the job market disappears and wages go down, I will still be able to live. I may not have 3 bedrooms and 2 baths....but at least I can pay the bills with the lower wages being paid in this country now days.

Well... I got this radio in yesterday's mail, and got to playing with it.
First thing I noticed was that it would still work using the AC adapter..
verrrrry in ter est ing.. Next, I looked inside the battery compartment and
saw that the positive end of the three battery holder had been very hot and
melted the surrounding plastic. I installed a set of batteries, and, sure
enough, it got very hot and began to melt.. in the same place! This was
interesting. So I opened the thing up and started poking around.

First thing I noticed was that the battery connection that had gotten hot
was not on the actual positive end of the battery supply, but was connected
up to the negative end of the single battery holder. This holder was
completely undamaged, as was the negative end of the three cell holder, and
all the wires leading to the battery compartment. Curiouser and curiouser.

In fact, other than the melted plastic on that one connection, I didn't see ANY damage at all. I next checked the polarity protection diodes. Both seemed fine, so I cleaned up the melted plastic on the battery connection in question, and reinstalled a set of batteries (held in with Scotch tape, since the chassis was out of the case, so nothing to hold the batteries into their holders). This time, no heat, no smoke. I hit the power button, and voila... it was a radio.

Removing all other factors by process of elimination, the only thing I can figure is that there must have been a poor connection to that battery connector that was causing it to heat up. This really doesn't make sense, though, since I doubt the whole radio when it is turned on draws enough current to heat that connection up. Makes me wonder if there was some sort of foreign matter between that connection and the B- bus.. that fell out when I disassembled the radio. At any rate, the radio is now working on both batteries and AC.. but I won't be using rechargables in it, nor turning on the internal charger.. why push my luck.

BTW.. this is a nice sounding radio with pretty good performance.. but why didn't they put a BFO on it???

Oh well.. the price was right for sure. Thanks, Jim. :)

Correction: The Tacony-Palmyra (as well as the Burlington-Bristol) is
operated by the Burlington County Bridge Commision. The toll is $2.00.

Hello:

I belong to several Yahoo Groups dealing with radio.

Got the following, yesterday and today.

Is it legitamite ?

Thanks,
Bob

Dear Yahoo! Groups member,

You belong to one or more email groups provided by Yahoo! Groups
(groups.yahoo.com).

Recently, messages sent to you from Yahoo! Groups have been
returned to us as undeliverable. As a result, we have temporarily
turned off message delivery to this email address.

If you are reading this message, the delivery problem appears to
be fixed. To start receiving your groups messages by email again and
turn your account back on, please visit:

http://groups.yahoo.com/unbounce?adj=164271332,45769&p=115658

(You can also copy and paste this link into your browser, and hit the
'Return' key.)

Once you reactivate your Yahoo! Groups account by clicking the
link above, you will receive messages from your group(s) again.

Tip: You can read messages you might have missed while delivery was
turned off by visiting your groups here:

http://groups.yahoo.com/mygroups

Thank you for using Yahoo! Groups!

Hi Steve,

I learned the hard way once, when I cracked the 500kHz gating pin on the PBT/Reference board when trying to force the DR-7 board back in. I had a blank display.....I was able to isolate the problem by connecting an external 500kHz source from a function generator and restoring normal function.
On another note.....I have used those replacement displays that the fellow in Germany makes. They work very well. It is pretty much impossible nowaday to get ahold of those old National Semiconductor dual LED displays.

Caribbean
Beacon
P.O. Box
690
Anguilla
British West Indies

When I QSL'd them back in 1997 I don't think they had a QSL card so I sent a
PPC.

Now I believe they have their own QSL card as evidenced by this:

It's legit. I get these every once in a while. Check with your ISP and see if they haven't decided to bounce it because they think it's SPAM. I could give you better pointers if you were using a legit e-mail addy in your post.

I've not had any display problems *yet*.

My most recent R7 was down for tune-up this November past by Jeff Covelli,
WA8SAJ, and he puts new bulbs in as part of the tune up. He also did that with a
previous one I had down there a few years ago.

He generally puts in new blue filter material as well.

I'm not sure how reliable the above source is, but if true, yet another
bush scandal brewing...

If they -don't- have anything to hide, why do they arrest people at
Andrews for taking pictures??? So much for "Freedom of the
Press"---another one of our rights gone down the tubes.

In any event, ya gotta wonder what they are trying to hide.

I have a better idea Mike. If you don't like the guy re-selling
things he bought at estate sales and other places, simply ignore him.
It's just that simple. Go to another Deli and get your Cornbeef on Rye
at another store. Life's too short to worry about ham radio dealers
that's fer damm sure! :)

What is "Think Progress"-ive?

http://www.discoverthenetwork.com/groupProfile.asp?grpid=7121

Internet website dedicated to promoting "PROGRESSIVE" ideas, attacking the "Radical Right-Wing Agenda," [LOL] and supporting the [Socialist/] left wing of the Democratic Party

Project of the American PROGRESS[-IVE] Action Fund, a "sister advocacy organization" of the Center for American PROGRESS[IVE] (CAP)
http://www.discoverthenetwork.org/groupProfile.asp?grpid=6709
run by former CLINTON adviser John Podesta
http://www.discoverthenetwork.org/individualProfile.asp?indid=1626
and CAP's entities such as Campus PROGRESS[IVE].
http://www.discoverthenetwork.org/groupProfile.asp?grpid=7122

It also draws freely on the resources of the GEORGE SOROS-funded
http://www.discoverthenetwork.org/individualProfile.asp?indid=977
Media Matters website
http://www.discoverthenetwork.org/groupProfile.asp?grpid=7150
edited by [SOCIALIST] David Brock.
http://www.discoverthenetwork.com/individualProfile.asp?indid=2039

Think PROGRESS[IVE] is an Internet blog that "pushes back, daily," by its own account, against its conservative [LOL] targets, and supports the APAF agenda: to transform "PROGRESSIVE ideas into policy through rapid response communications [PROPAGANDA], legislative action, grassroots organizing [MAO TSEDUNG] and advocacy, and partnerships with other "PROGRESSIVE" leaders THROUGHOUT the country and THE WORLD." Think "PROGRESS[IVE]" promotes an agenda identical to that of the [SOCIALIST] left wing of the Democratic Party.
http://www.discoverthenetwork.org/groupProfile.asp?grpid=6214

"What We're Fighting For," says the Think "PROGRESS[IVE]" website, are: "Social and Economic Justice," "Healthy Communities," "Global Leadership" [COMMUNIST PARTY INTERNATIONAL] and "A Secure America." [take over America] These terms are code for an agenda that is anti-capitalist, suspicious of the American military, obsessed with multilateral restraints on U.S. power, and distributionist in domestic fiscal matters. [I.E. COMMUNIST PARTY UBER ALES]

"What We're Fighting Against," says the Think "PROGRESS[IVE]" website, are: "Corrupt Establishment," "Incompetent Establishment," "Braindead Media," and "Radical Right-Wing Agenda." [LOL]

The editors and main bloggers of Think PROGRESS[IVE] are Judd Legum and Christy Harvey.

Legum is the Research Director at the Center for American PROGRESS[IVE] and Co-Editor of The PROGRESS[IVE] Report, an APAF publication of news and commentary that Legum claims is emailed each weekday to 60,000 "PROGRESSIVE" readers. Harvey is Director of Strategic Communications at the Center for American PROGRESS[IVE] and Co-Editor of The PROGRESS[IVE] Report. She is a regular guest on [DEFUNCT] Air America Radio's The Al Franken Show. [LOL]

Legum and Harvey co-authored a January 2005 article with Jonathan Baskin titled "The Death Squad Option" that suggested American troops were wantonly killing or kidnapping suspect Iraqis. Drawing a parallel with Reagan policy in El Salvador in the 1980s, the authors cited a 1993 United Nations-sponsored "truth commission" report claiming that up to "90 percent of the atrocities in the conflict" were committed by the U.S.-sponsored "death squads." "Faced with an intractable insurgency in Iraq," wrote Legum, Harvey and Baskin, "the Pentagon is returning to its bad old ways." [fighting Communists]

CAP Fellow David Sirota, who also writes for Think PROGRESS[IVE], worked for two years as chief spokesman for Democrats on the U.S. House Appropriations Committee. Prior to that he was spokesman for independent Vermont Congressman Bernie Sanders, a member of the DEMOCRATIC(?) SOCIALISTS of AmeriKa (DSA),
http://www.discoverthenetwork.org/groupProfile.asp?grpid=6428
the main American branch of the SOCIALIST INTERNATIONAL and the FOUNDER of the PROGRESSIVE Caucus in the House of Representatives.
http://www.discoverthenetwork.org/groupProfile.asp?grpid=6497

I sincerely and whole-heartedly congratulate you! (and too bad there aren't a whole lot more like you).

Unfortunately (and as I stated previously), you and those like you are sadly a very small minority. A large portion of the country is in debt up to their eyeballs and are teetering on the edge of financial ruin. Will the housing bubble going bust push them over the edge???

(note for the nit pickers: that's just a -rhetorical- question).

P.S. from your comments above, I'm glad to see you realize that the job market is disappearing and that wages are going down. Many others on this newsgroup haven't quite figured that out yet.

> You have avoided telling us exactly how the "entire country" (your
> words) will be hurt by a slowdown or even downturn in real estate
> prices. Please tell us precisely how the entire country will be hurt.
> Remember entire country means just that...each and every person,
> business and governmental unit.

There were two reasons I used the phrase "entire country". The first is that it is just a figure of speech; don't try and read too much into it.

The other reason is -context-. This was originally written to answer a previous responder that said the only people affected were -just- the sellers, a premise I disagreed with.

Please don't be so foolish or naive as to think that my figure of speech -literally- meant every man, woman and child in the country.

Furthermore, I fully realize that even during the Great Depression of the 1930s, as horrible as it was, there were people who weren't hurt and even those who profited. Yet, this didn't mean the Depression was a good thing for the country.

Petty nit picking on your part notwithstanding, I fully believe that the collapse of any bubble, housing or otherwise, affects more of society than just the seller and that, generally speaking, is detrimental to the nation's economic well being.

>>> The only crowd to get burned in this speculative madness will be those
>>> who got in late.
>> Sorry, Jack--I don't buy that. Very naive of you. That's like saying a
>> Ponzi (pyramid) scheme is good for the early but bad for the latecomers.

>> -everybody-, all the time, every time, early or late.

> You need to look up the definitions of ponzi scheme, pyramids, etc
> before throwing them around. You look like a fool by using them
> inappropriately here.

I know the definition of a Ponzi scheme. YOU look the fool by missing the analogy here--early vs. late profiting, NOT to imply that the

housing bubble is a Ponzi scheme.

> But to follow up on your statement, how does the homeowner who
> purchased early in this housing cycle get burned. All he has to do is
> do as others have - continue to use the house as a home and make the
> payments.

Yeah, right. In some instances, I am sure this will happen---BUT, how long is the happy homeowner going to keep making payments on his $400,000 house that is now worth $300,000? It's just like being "upside down" with your car payments...you owe more than the car is worth.

Pardon me for not responding to the rest of your nit-picking, but it comes down to this irreducible minimum: I believe that the the housing bubble going bust is bad for the economic well being of this country; you, apparently, believe otherwise. We are each entitled to our opinions. No sense going any further.

I think there are anti static wipes/cleaning cloths available on the market,do some searches on the internet for them and check the computer/electronic stores in your area.Many years (back in the 1950's) ago I read that squeezing a cloth in a pan of water with a little household detergent is good for cleaning tv set screens and helping to cut down on static electricity.I never tied it though.

Those new LCD and Plasma tv sets and similar screens,(that thin screen junk) I wouldn't try the water and detergent method on them,I think they require special care to clean them.I still prefer the good old tried and true CRT screens.Other people's soybean oil might vary.

> cuhulin

There are only three "toll roads" in New Jersey - the Garden State Parkway, the New Jersey Turnpike, and the Atlantic City Expressway. There are, indeed, numerous toll BRIDGES, generally run by joint authorities with the neighboring state. There is a large number of "local" roads and lesser bridges that people use routinely to cross state borders, as well as some significant highways such as route 17, I-287, and the Palisades Interstate Parkway into New York, I-95 and US 1 into Pennsylvania.

Never let it be said, however, that New Jersey folks are opposed to taking an opportunity to make a buck. ;-)

I gather Mike reads a lot of ebay, so he isn't exactly looking for
Radio-Mart(TM) ripoffs. Personally, I find this entertaining as I
discovered Radio-Mart(TM) from an auction on something I wanted to buy,
but refused to do so from someone who has private sales.

Mike, bash on!

Well,get a pan or bowl of water and add some regular household ordinary detergent to the water,stir it up real good and give it a try.What have you got to lose? I am going to do it to my CRT (good old CRT Glass) tv sets screens next time I vacuum them and then the water and detergent treatment.I reckon if an area is too dry a humidifier helps put some moisture in the area.Udderwise if an area is too humid (such as damp basements) a dehumidifier helps.

3371. The RFI snip hunt

Newsgroup: rec.radio.shortwave
Date: 2006-08-26 20:03:15 UTC
From: r2000swler@hotmail.com
Message-ID: <1156622595.068305.301940@75g2000cwc.googlegroups.com>
Source record: 89433

I may have mentioned my quest to find and stomp RFI.
I found a very handy tool. The dual purpose pill bottles,
the ones with a single top that can be child proof, or
non child proof by simply turning the cap over are great
for a variety of RF uses. I have used them for coil forms
and by mounting tow pill bottles end to end, you can
lift it away from the metal case wall.

I wound about 24 turns of solid #26 insulated hook up wire
on one pill bottle. I drilled ~.1" holes to carry the wire to
the inside of the bottle and mounted a BNC female connecter
in the lid. By drilling a hole in the bottom of another
pill bottle I can feed coax and have a nice holder keeping
my fingers away from the coil.

I use RG-174 to connect the probe to my DX398. With a
4' piece of coax I am set to check every device in our
home for RFI.

I built a similar unit with only 2 turns for hunting higher
frequencies. And I built a probe in a larger sharpy with
a 300uH radial inductor to sniff inside of equipment to
find the exact noise source.

While I used BNC connectors, there is no reason why a
dedicated probe with RG174 terminating in the approbriate
connector couldn't be used for cast savings. Since I had
the BNC connectors in my junk box, and because I
wanted to be able to use a double male BNC to mount
it on my HT or scanner I decided to go to the additional
trouble and "expense".

I found an allusive "pop" RF source in one of the battery
operated smoke detectors.

Every time I find another noise source and clean it up, I can
receive ever weaker signals. Of course I don't have any such
success with my neighbors.

These little probes added to my 400MHz mini yagi with a
PRO34 allow my to farily quicky find internal and external
RF noise sources.

And while I use a DX398, there is no reason why any portable
couldn't be used. A desktop receiver will also work, but a portable
is so much more convinient.

Be sure to check the incoming telephone line, CATV etc.

While a few odd sources only emit RF on one frequency, most are broadband jammers.

Terry

The various "free flea" ham events that pop up here ins S FL are well
attended. They are short and sweet events opening at the crack of
dawn and ending by noon. Stuff for sale is a mix of old radios
from the 50's through the 90's (with a few WWII boat anchors here
and there), lots of computer crap (who wants pre-pentium stuff these
days?), and a few tube vendors. Also the usual guys just cleaning
out their junk boxes. Why pay to go to a big ham fest when you
can show up at a freebee? I usually don't find any real big bargains,
but I do bump into old friends, chew the fat, and usually take home
some needed parts for a project.

Maybe the flea markets at the big
shows are lean because all the sellers have dumped their stuff at
the free fleas? It is a pain to have to load up, set up, hang around
for two long days and then pack it all back in and go home. With
the free fleas you just open your trunk throw a blanket on the floor
or open up a folding table or two. 5 or 6 hours later, (not too
long a drag) you pack it up and go home. You'll take less stuff
to sell, and maybe have to go to a few free fleas to get rid of it all
but somehow it seems like less wear and tear on the old body.

I still like to go to one big hamfest a year though, just to see what
the big vendors have come up with.

I'd be both, but the CB'ers would have to agree to:

1: No more automatic renewals. CB'ers must retest and
pass all elements required for the Extra class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements, 13 wpm for General, and 20 wpm for Extra and CB'ers.

4: Make the no-code license one year non-renewable.

Tnx, 73, Keep up the good work. Burp.

That might be true if you were living in some of the larger cities. But
if you can't live on $20-$30/hr I'd question what sort of expensive
habits you have.

Only a $200 million increase from last year and that was due to the
increased taxation of business. You can do the math: revenues generated
from people in low-paying jobs cannot make up the loss from the same
individuals in higher income tax brackets.

BTW, you should take a look at housing trends; can we say economy
cooling down?

Where exactly are you on the East Coast? If you are in the northeast try for England on 1215 kHz, Croatia on 1134 kHz, Monaco on 1467 kHz, Saudi Arabia on 1521 kHz, the Vatican on 1611 kHz. Too bad Norway on 1314 kHz is no longer broadcasting.

bush is not a Republican,he is a Commie Fascist new world order Nazi.Read Chuck Baldwin's latest, www.chuckbaldwinlive.com Read this, www.devilfinder.com BostonHerald.com - Herald Columnist: Oilman bush has gas in background

Margery Eagan also mentions lbj in that article.I know a couple of things about lbj that possible Margery doesn't know.I think I will email her at Boston Herald and let her know.

Say,looka here,the 30 year old divorced (she is probally 31 by now) brunette woman is next door right now.She said she is going to move back into the house next door to me.I told her to find a couple of wimmins about her age to move in with her so they can help pay the rent and I will come over and visit with them once in a while.I just now saw out my front window,her car (white 1997 Oldsmobile Cutlass Supreme) going up the road.Maybe she is going to get some beer.She asked me for a beer,but I am out of beer.I am going to fix that when I go to the food store tomorrow afternoon.

I've never ordered anything from them -- but on a number of occasions,
I have read newsgroup postings mentioning a deal on that site... and
I've haven't heard a bad word.

They also have the DE-1101 for $50.... $10 less than universal and less
than what I now see on ebay. ($7.38 shipping).

I see an 'analog digital' (analog tuner with digital display) shortwave
unit for $9.99 - but I've never hear of the Sonnet brand before...

> http://www.zapchecker.com

I have one. I've found cables underground, wires in the walls, etc. I've used it to get a rough idea where RF is leaking. For what you pay, it is a good device. It is not a test instrument.

I have a rather interesting application for the zapchecker. At a certain military base that doesn't exist, I can detect when they fire up their radar. The peak detector on the zapchecker (the LED, not the meter) will flash about every 13 seconds. This is from about 10 miles away.

I should point out that this device was sold for year at local flea markets at a substantially lower price than what you pay for it online. The varients of the basic model are really just hacks the designers saw done with the original zap checker.

Note also that if you crank up the sensitivity, the zapchecker will detect reradiated RF. That is, metal objects in the presence of a RF field will reradiate the RF just like a passive radiator, and the zapchecker will think it is alive.

You can use the zap checker to get relative readings. In RF shielding, you take an initial reading, note the gain on the dial and the reading on the meter, then shield a compent and see if the RF level drops.

You're telling ME about EOL?

PS Michael Jackson had a legal, binding CONTRACT with Epic records, a company that was owned by Sony (not sure if that's the case unless I'm kust mixed up by AC/DCs ATCO catalog work showing up there recently). I also think the artist has acquired use of his catalog much the same as the members of Queen did when they got their own label. However that works, I seem to recall R Kelly continued making records after the sex tape incident and also that it's completely up to you as to whether you choose to buy a product or not. Michael, for better or worse was acquitted of the last bunch of charges and not being convicted as such a company with a binding contract has a choice of what to do about the artist's required output. If you have a beef about that, is ISN'T on topic for this group or any of the others that Xpost here lately, not even rec.radio.cb.

Go pleasure yourself Patty.

A few years ago my co-workers expressed an interest in my hobby of listening to the shortwave radio. That evening I recorded a cassette tape with a couple minutes worth of various international broadcasts and ended it with WWV. Gathered around the tape recorder the next afternoon about half a dozen of them listened intently to short clips of news, cultural programming, editorials, and more. When WWV announced the time, every one of them looked down at their watches. They realized the error immediately and we all had a good laugh.

>until you realize that these people want to progress to communism.

I think the fact that Progressives created the climate that brought
down the big trusts of ca. 1900 is the reason the Right Wing
Propaganda Machine tries to label them as Communists. The mass media
in the USA is dominated by fascists.

''Progressivism is term that refers to a variety of political
philosophies that promote what they see as progress, or positive
social change. There are at least three distinct meanings of the word
progressive. Ordered from the most vague to the most specific, they
are as follows:

In the broadest sense, the label "progressive" may be used in
self-description by anyone who advocates any kind of change in
society. This could include the entire political spectrum.
In a somewhat more restricted sense, "progressive" is a term used
within left-wing politics to distinguish left-wingers who advocate
moderate or gradual social change (called "progressives" or
"reformists") from those who advocate larger and more rapid changes
(called "revolutionaries" or "radicals").
Finally, in the most specific sense, there is a political movement and
ideology called progressivism that first began in North America during
the late 19th century and the early 20th century. This ideology
belongs to the moderate left, but not every moderate leftist is a
progressive. Progressives support the continual advancement of
workers' rights and social justice within the context of a mixed
economy. They were also among the earliest proponents of the welfare
state and anti-trust laws. ''

Wikipedia is a Left-Wing Propaganda Machine.

Left-wing/Neo-Liberal/"Progressive"/Socialist/Islam-0-Fascist/Communists will high-jack ANY so called movement to attract naive customers to their agenda. Especially those with no or little knowledge of historical facts. It is by the lack of historical facts which the Left-wing/Neo-Liberal/"Progressive"/Socialist/Islam-0-Fascist/Communists take advantage. They then use devices frequented by naive youth such as the internet in attempts to rewrite history with propaganda lies - smoke and mirrors.

If you study Mao Tsedung and the Islam-0-Fascist movement (read books, not the internet) you will recognize the identical method of ideological indoctrination through deceit. Mao Tsedung was a master at the technique. He was so good he fooled his Soviet puppet masters. The puppet manipulating the puppet master.

Certainly NOT
Left-wing/Neo-Liberal/"Progressive"/Socialist/Islam-0-Fascist/Communists

One-third of the landmass is suffering from acid rain... a major threat to soil and food safety

Factories spewed out 25.5 million tons of sulphur dioxide • the chemical that causes acid rain • last year, up 27% from 2000

pollution from factories and power plants was rising by 9% a year

sulphur dioxide emissions were double safe levels

all major rivers are dangerously polluted

some areas comply with as few as 30% of [inadequate] environmental regulations

Hmmm...lets see...what could possible be wrong with this auction.
Maybe it is bid after bid by sellers with zero feedback and a final
price that is probably 10 times market value.

The R5000 radios are nice sounding but barely average performance.

There are MANY reasons why ham may not be as popular. NO ONE reason is THE reason. Code sure isn't it. It didn't stop the many who desired a license from persuing it. If you want to do it - you will - simple as that. EFFORT is the name of the game!

> Slow Code wrote:
>> Let's keep the CB'ers on CB.
>>

Many a fine CBer has moved up to Ham - and improved the hobby. CODE didn't keep the scum of the bands from operating there ON CB OR now in the Ham bands. SO - CODE IS NOT THE REASON.

>> 2: The passing score for written exams needs to be raised to 85%.

>> Tnx, 73
>>
>> SC
>

With the way you've been talking - you (SC) couldn't even do 85%. SO, you'd be cutting yourself out.

I've said it before, I'll say it again - there are MANY things in life you MUST learn to get by, some by pure need or desire. You "LEARNED" to drive, had to study the rules of the road. You "LEARNED" how to do many other things - and I'm damned sure "studied" things in school - maybe even college or post high school to get to where you wanted to be - maybe took an exam for a job promotion. HAM is just one more thing to "learn". For Christs sakes, if you had EVERYTHING handed to you - it wouldn't be worth having. To JUST have a "DRIVER'S LICENSE" "GIVEN" to you - would produce havoc on our roads. To JUST GIVE AWAY "PILOTS LICENSES - would be devastating to many when they come crashing down. To JUST "GIVE" Radio Licenses away - regardless class or whatever - would produce havoc on the air waves. SOMEWHERE - there HAS to be SOME control.

ANYONE not willing to work for something - is PURE LAZY..... NO other way to put it. I suppose those of you whining and bitching - never had

the pleasure of "satisfaction" KNOWING you "passed" a test by KNOWING the material - NOT having it given to you.

THIS isn't ALL JUST about code anymore - our whole freaking nation is dumbing down and that is SAD. AND it is getting to be a "lawless" society where no one cares anymore - they do as they damned well please. Be it on the telephone, radio, highway, waterways, in the air..... where ever - doing whatever - they're not supposed to be doing. Step on your neighbors rights but damned if they're to step on yours. That logic creates more troubles.

This sort of thread will continue as long as there are whiners who don't want to EARN a privelage - they want it "handed" to them. No wonder this country and/or world is so screwed up.

That sounds like the ABC news special with Peter Jennings. Somewhere I have a frame grab from it. I recall seeing an AOR SDU and AR7030. Some Icoms as well, but harder to ID.

The point I was trying to make is that the amateur radio hobby matured about 3 decades ago. It's membership is aging rapidly and the number of active participants is declining. As the baby boomer generation dies off at an increasing rate the amateur radio hobby will continue to fade away. Fiddling with the test requirements isn't going to magically entice younger blood away from the many other license-free ways of communicating. I would venture to say that you could open the ham bands completely CB style and not get a big jump in membership. There are just too many other interesting, easy to use ways of communicating that that younger people are accustomed to using. I wish it were otherwise.

Making the ham radio test more of a challenge as you suggest misses the point completely. The point is that there will be a diminishing number of people with any interest becoming a ham, no matter what the requirements are.

BULL SHIT? TRY a bit of effort in some of your spelling dude - your website sucks with misspelled words as do most of your posts.

EFFORT IS required in most anything in life - worth having. For some jack off who thinks we NEEDED this war - then why don't you MAKE AN EFFORT TO HELP FIGHT IT. Maybe if we're lucky, you'll be wiped out instead of a soldier who didn't need to be there.

Don't even bother replying jack off. You're barred from my screen.

Well,I have DirecTV.I just clicked to the left of the UFOs program on channel 276 and it says, NGC
Passionate (I like that word,Passionate) storytelling that brings adventures,exploration,culture and natural wonders to life.Educational.Peter Jennings is the narator on the program.I wouldn't doubt that ABC did run the program before.Next up program is,Lockdown! Gangland.But I will probally find me something else to watch.At 12:15 PM,Sands of Iwo Jima is on the TWC channel so I will watch that movie.

Good luck with the QSL. Let us know when it arrives.

Just a reminder. the NASWA Country List is available here:

http://www.naswa.net/list/

Keep track of your totals.

How convenient? After all wasn't it Bush that lied and said that Hussein had links to Al Qaeda and their scummy assoicates. By the way, what happened to the WMDs that Iraq supposedly had? Maybe we can ask Karl Rove? Doubtful that he would know the truth even if it bit him in the ass.

You "could" be and may very well be right in that regard as to the numbers increasing or not if the bands were completely opened. But since most of this crap evolved around CODE and then the "learning" ability of "exam" material - those issues are not the <complete> problem. As I said, if you want to "learn" anything, effort is the key. All through our lives, we all have to LEARN "something" to make us who/what we are in life. You learn to do your job, even if it isn't from a text book. But, you have to admit - except for sweeping floors, pumping gas, washing windows, etc..... it DOES take "effort" to learn the tasks. Once you master them - then usually it is a piece of cake. "Learning" should never end for anyone - until their number is up here on earth.

In code, you learn ._ is "A". In driving - you learn to put your left turn signal on and then turn the wheel left - to make a left turn in your vehicle. In a factory or on a construction job - you learn hand signals to instruct a crane-man at a job site. Whatever it is - you learn "something" to get you by in life - be it a job, hobby or whatever. In most cases (except code) - NOT learning - could get you or others injured or killed.

I DOUBT - anyone jumped in a car the first day and went and passed their drivers exam - it took EFFORT to learn to drive (safely). I DOUBT anyone - jumped in a plane and passed their pilots test the first time in the plane - it took EFFORT. Even to pass a physical ability test for some jobs - TAKES EFFORT. Any SOLDIER or PRO or even high school/college athlete who has

excelled - will tell you that.

To the screwball who said BULL SHIT to "effort" - he claims to be an EME user on his website. I'm DAMNED sure he didn't just wake up one day and decide to try EME - and be eh - fair(?) at it! SOMEWHERE along the line - it took EFFORT to acquire the knowledge, license and materials to do so. Too bad he doesn't make some "effort" to "spell" properly - MOST of his bull shit has been misspelled so poorly, he comes across as a tard. No wonder he gets picked on..... Misspelled words, "NEEDED" wars, etc..... SHEESH. I misspell a word here and there once in a while in error - as do many others. BUT there are SOME who seem to KILL IT when it comes to spelling. They never heard of "spell check"? Can't even make effort to use THAT to make them look a bit brighter.

It doesn't matter how easy or hard the tests are - Code or NO Code - the point here in this thread and others similar is - it seems some want it "handed" to them and all I'm saying is EFFORT will help you get it and you'll be rewarded - your achievement - be it a license, an upgrade in license OR a job promotion with subsequent pay raise or position. So what if you never use the code again to save a life or just to chat on the air - who cares? To pass the muster for some promotions in the service, you have to prove physical ability, and some of those things needed to be done - you may never have to make use of again. Tell your senior officer you're not going to do it and see what you hear in return.....

IF YOU WANT IT BAD ENOUGH - YOU"LL DO IT. Of course - weinie boy who thinks effort is bull shit and believes we NEEDED wars - wouldn't have a clue. So the quiestion is now - did he cheat on his exam and had his license handed to him OR have the equipment donated to not have to make the EFFORT to acquire it all?

Opening up the bands won't be the answer to the "population" of the bands. IF I were God, had a Crystal Ball, I might be able to give the "exact" answer. I've "never" claimed to have it nor do I now. All I can say, is we know where we're headed and it will be interesting in say 5 years or so - to see how we do indeed end up. Changes "could" come about to revive it, open the bands up OR shut them down. Right now, they are somewhat protected by Vongress, but the Congress members are usually able to be bought out by special interest groups - so - NEVER SAY NEVER..... we could be sold out next year if enough of them get their heads together. Then - all of these threads will be moot points. Hell, we may end up paying to type/read this - over and above our ISP payment. There WAS a move to do so..... Nothing to say it couldn't happen if someone tries it again.

L.

If you can't live on 20 to 30 dollars an hour you have a serious spending problem. I make close to 20 dollars an hour and I am doing okay, not rich but okay. It is all about how you spend your resources too. Give me a few more years and I might be making quite a bit more especially with advanced education, own business, etc.

The economy is cooling because of the housing slump based on the overinflated McMansions and people living in 500,000 DOLLAR houses who are making horrific mortgage payments. That leaves less money to put into the productive economy through spending or investment. Hard to sustain a decent economy without consumption and investment. Housing bubbles just don't cut it.

So, the way you envision your future communistic economy is to place limits on what people build and what people buy, and more importantly what they spend *their* money on?

Good luck, boy!

My biggest gripe is that the SAME guys show up selling the SAME old crap that you have seen for the last 4 or 5 years now and the all think that they have stuff made out of pure diamonds. If the rest of us don't buy their overpriced crap then prices would come in line with reality. (getting off soapbox now...;-)

Hi All:

I have a radio shack DX394 and an RF Systems EMF antenna. From about 7020 through 7180 or so I am getting interference from KYCH 97.1 FM. I can recognize the song playing.

Is something likely wrong with my radio, antenna or is it them? Or could it be that I am pretty close to their transmitter?

This is in Portland Oregon

I'm confused here. What does all of this have to do with liberals? It's
been the Reagan and Bush II administrations that have dismantled much of the
environmental protection safeguards put into place over the past 40 years.

Just an observation..

All the bids were posted at the end of the auction and
the Sony ICF-SW55 is a rather rare radio and is also
an upgraded circuitry version of the venerable Sony 2010.
I see no problem with this auction. Perhaps if you want to
be an self-appointed "e-Bay Cop" you should contact e-Bay
directly and offer your services to them at no charge instead of
wasting your time in the ham radio NG's?

Last year somebody asked the question on the shortwave radio newsgroup about where to find audio cassette plastic cases by themselves, now that Radio Shack no longer sells them separately. I recently verified the existence of a source and yesterday tried to post the answer here. However, my posting doesn't seem to have made it to the Usenet. So I'll try again, but without details because posting the contact info was meant as a one-time thing.

So if anybody out there is looking for a source for audio cassette cases, drop a note to my public mailbox (see below) and I'll forward the info.

Ace is correct. Art's call was/is W6OBB. Last time I heard him on 3840
he was using an Icom 7800. I really like the auto CW id he used.

Sadly he had a falling out with the group on 3840 before he went to the
Philippines & would not use that freq.

Also I should note there is a group of guys that use 3840 in the early
evenings....2300 UTC +-.... that are a hoot to listen to.Some of them
have been or still are in the Radio Broadcasting buisness.

Of course more activity as cooler weather & less static are the rule.

Yeah, I've been listening to those guys for over 20 years. Some of them operate in the early mornings on 3849, 3850 on weekends.

Good deal Ace.

K8LQ Brian in CHARLEVOIX MI is my favorite.

Some of the prerecorded ID clips he plays on his transceiver make me
laugh really hard sometimes.

K8FW Ferrel in Milford, OH is also interesting to listen to IMHO.

Ken

WOW ! you sure have NO idea what you are talking about !!!!

the 55 is NOT AT ALL RARE !
it DOES NOT have advanced circuitry over the 2010 !!!!!!!
It DOES NOT even have a sync detector !!!!!

the average price on ebay for the 55 is $175 to $250 depending on what it
comes with, hard case or soft case etc....

but you are so clueless, I am not sure what I can teach you.......

I'm confused here. What does all of this have to do with liberals?
It's
been the Reagan and Bush II administrations that have dismantled much of
the
environmental protection safeguards put into place over the past 40
years.

Just an observation..

==========
Brenda, good luck. i tried to get him to explain what a neo-liberal was.
all he wrote was china did this, china did that. he should be wondering
what iran is up too, after the bushies took out thier main enemies. just
do what i did and put him in the bit-bucket.

Father Michael.

Want to see interest in radio pique?? Open up a band specifically for
unlicensed broadcasting. Not CB, not ham, but actual broadcasting. I can see
tens of thousands rushing to get in on that one..

The problem with young people anymore is that they don't communicate face to face.. if it's not on the phone, or some instant messenger, they don't communicate at all.

An FM BCB rejection trap might solve your problems.

Several compaines make them.

Radio Shack (shudder) makes an inline "F" to "F" unit that works pretty
well.

I have a PCR1000 that suffers from local FM BCB overlaod. And a local
rat
shack was having a going out of business sale. So I bought the last
four
they had for about $1 each. One was enough to completly remove the
FM interference.

At full price they shouldn't break the bank.

Terry

3528. RFI woes

Newsgroup: rec.radio.shortwave
Date: 2006-08-28 00:49:39 UTC
From: Steve <sdaniel13@speakeasy.net>
Message-ID: <1156726179.592441.53650@b28g2000cwb.googlegroups.com>
Source record: 89690

I'm pretty much out of commission tonight. A few days ago I started getting some really powerful RFI going pretty much all the way from 2500 khz to 12 khz, hitting its peak at around 8 mhz where there's no way you'd hear anything. It's not a problem during the daytime. It starts just as night falls. It's constant, a relentless noise that's somewhere between a roar and crackle...more like a crackle, I'd say. I'm shocked at how strong it is. I walked around a two block perimeter with a small portable to try to isolate it. Haven't isolated it yet, but the noise gets insanely loud about three quarters of a block from my house. Whatever it is, it's in that area.

I'm hope the noise is coming from a street light or a powerline, since at least then I'll have someone to complain to. I think the street light is a real possibility, since it starts just as darkness falls. The rest of the time there's no trace of it. Another possibility would be someone's outdoor lighting, but there were no suspcious looking lights at private residences in the area where the noise seemed loudest. Plus, I've never heard RFI this intense originate from any private residence. It has to be heard to be believed.

Fortunately I don't hear it on MW, so I can still mess around with the Quantum Loop tonight.

Steve

IIRC, it was on 3978. It never begins on 3950 any more, but sometimes moves down to 3950 (if it's clear) later in the night to escape QRM. Nothing unusual happened. No jamming, just a few cat calls. Blowhard of the night award went to that guy who goes on and on about that Catholic saint Monica Luken (sp?).

3534. Taiwan QSL mix-up

Newsgroup: rec.radio.shortwave
Date: 2006-08-28 01:13:21 UTC
From: weatherall <weatherall.2d8d5b@news.radiobanter.com>
Message-ID: <weatherall.2d8d5b@news.radiobanter.com>
Source record: 89785

Radio Taiwan Intl made a small mistake and sent me two QSL cards for the same reception. They were mailed 2 weeks apart. The second QSL card I received from them has the wrong frequency listed (3965 khz instead of 5950 khz). 3965 khz goes to Europe during 1800-1900 UTC according to primetimeshortwave.

Both envelopes include a QSL card and a postcard, and each one is a unique design. It's common for Radio Havana Cuba to include two copies of the same QSL card in one envelope but this is the first time I received two independent confirmations.

That because they're all appliance operators, they don't want to put forth
an effort to learn and it will end up sounding like CB.

Kevin, this is VHF image interference related to the 1st IF of 45 MHz.
The 1st local oscillator is at 52.1 MHz to tune in 7.1 MHz- -
difference equals 45 MHz, but 97.1 MHz also produces a diff of 45 MHz.
While the DX-394 does have a filter in the Lo-Z input to suppress
signals above 30 MHz, its stop-band attenuation is not enough to
prevent strong VHF signals from breaking through. Add an ouboard 30-40
MHz lowpass filter in the coax line between the antenna and LO-Z input
to increase the VHF attenuation.

Also, for more info on the DX-394, join the user group at
http://groups.yahoo.com/group/RADIOSHACKDX394/ .

And 97.1 has a dirty transmitter, too. I used to live on 15th and Belmont,
and used to hear them on my Roberts stereo reel to reel tape deck (tube
type). This was back when they were KPAM-FM, just before they turned into
KCNR. Portland stations change calls more than some people change shirts.

I thought I would try to hear the IRIB station on 7235kHz 1:30-2:30 tonight just for fun. There were some amateur operators knowingly talking over the broadcast on LSB (they mentioned hearing the station). I had to switch to USB to avoid their chatter where the reception wasn't so good. LSB was excellent except for the Hams. They seem to have stopped now.(1:49) That is just bad form, in my opinion, I don't care who it is.

Yeah, I can hear some Ham interference also. Interestingly, it's
worse on the Grundig Sat 800, but Iran sounds *much* better on the all
analog Sat 2100!

Other than the dumb ass Hams deliberately interfering, what did you
think of the Iranian newscast? Interesting, yes?

it makes me real depressed as an american that we let this scum into this country.
I am quite confident that he does not claim all the income he makes on eBay which I estimate to be over $200,000 a year and that means significant tax evasion that all of us have to cover.....

I have heard several terrible stories about what he did to cheat people while in the UK

Yo Low! U related to Hu Flung Dung? You should change the spelling to Wun Hung Low...
Anyway,
I bet they're hiding military secrets in there. Probably new stealth planes and such. It would be so much better if we all
just opened up to each other and stopped hiding stuff from other countries!
It's only fair, you know.
How the heck is our enemy supposed to defend themselves if they don't know what is coming next??
Stupid US cheaters.
Sheesh.
rb

PS: Then again, I heard on the SETI site that they may have moved the Roswell debris and bodies to Andrews, and anyone trying to take pics would get all those funny lines and crap in the film, caused by all the space radiation and stuff....
So in order to maintain control on the civilian film stock and keep from wasting it, the government has a secret
plan to stop all photography within the next 20 years anyway.

The 7100-7300KHz band is assigned for amateur radio use in the Americas, and for broadcasting in the rest of the world. (the 7100-7200KHz part is being reassigned, to amateurs, in those areas where it's currently used for broadcasting)

It was originally amateur spectrum worldwide. When the broadcasters got 7100-7300 overseas, they promised they wouldn't target their broadcasts to the Americas and would select frequencies, schedules, and antenna patterns that wouldn't interfere with the existing amateur assignments in the Americas.

I don't think anyone in amateur radio was surprised to find that sharing didn't work out so well.

Anyway, a broadcast station on 7235KHz has no protected coverage in the Americas. If IRIB wants to be heard over here, they need to use a frequency above 7300KHz.

In the early evening there is generally no place in the 7150-7300KHz voice band where amateur operation is possible without interference from broadcast stations. It is common practice to operate zero-beat to a broadcast carrier in order to eliminate heterodyne interference from the broadcast signal.

Unless the hams specifically mentioned IRIB, I strongly suspect they didn't know *which* broadcast station was there on 7235.

Last I checked, too many drafts causes an uncontrollable decline in
upkeeping, thus; forcing you to pull out early.

>

I apologize for my ham brethren. However, the 40 meter band privileges are very limited. No sideband is permitted below 7.15 MHz. Basically, if one wants to communicate with another on the 40 band at night, you're either going to use morse code, some very narrowband digital signal, or you're going to have to try talking underneath the broadcasters.

The problem here is the United States Federal Communication Commission. The international sophistry is that hams have the band during the day, and broadcasters have it at night. However, the band usually isn't worth using during the day for communications beyond a few hundred miles. At night it opens up with 2000 mile paths being common. Many hams would very much like to use this band at night to communicate with their pals on the other side of the continent. So they grin and bear it under the much more powerful broadcast signals.

Hams have access to the 40 meter band on a "non interference" basis, much like most of the bands ham radio operators use. Few bother to complain to the ham radio operators, however. So they're under no obligation to shut down.

This is the end result of one of those stupid international treaties which don't do anyone much good. It's not good for the broadcasters and it's not good for the hams. It's been this way since before I became a ham more than 30 years ago. I wish it were different, but it's not likely to change in the near future.

73,

DE AB3A

You go in on the delayed entry program, you spend 2 months talking 4 of your buddies into going with you, and you get an entry level of E-3.
rb

Dipole antennas should have 2 poles.

You should really stop by your local terrorist group in Iraq and explain to
our Muslim extremist friends that we are in no way trying to convert them to
Christianity and that we have no intentions of converting to Muslim, so
there is really no problem here.
They'll understand.
rb

Radio content:
Log periodic antennas have lots of directors and reflectors, but only one
driven element that sooner or later succumbs to the elements.

.....
Didn't you hear that Islam is a religion of peace? Heck, any Lib or C.A.I.R. member can tell you that.
So what if they cut off a few heads here or there? So what they kill a few of their daughters or wives in what they call Honor Killings. Heck, so what if they cut off the fingers of their women who (gasp!) wear fingernail polish? (there were more that 1,000 "honor killings" in Pakistan alone in 2005)
Yup...give em' an olive branch and tell em' you love em'. No problem. Then they'll behead you.

'Radio Free America' To Start Operations Next Monday

Citing the bias in America's media outlets that praises ineffective politicians, defames the U.S. military, and endorses politically correct behavior over commonsense, Mr. Ben Derdundat has a plan to change all of that. Mr. Derdundat has received enough donations from Americans seeking truthful news reporting to begin broadcasting a daily radio program called 'Radio Free America' (RFA). Similar to 'Radio Free Europe' that broadcasts more than 1000 hours a week to European and the Middle East in over 28 languages, RFA will be based in Kansas City and will be able to be heard all over America. All RFA broadcasts will be in what Mr. Derdundat calls, "strictly U.S. Constitution type English".

Starting next Monday you will be able to tune in commercial free RFA on AM 1610 from 2am to 4am, Monday through Friday. Mr. Derdundat said the 2am to 4am broadcast schedule was inconvenient but the 99,000 watts of broadcast power he plans to use posed a danger to aircraft operating within a 100-mile radius of his antennas. "We had to use 99,000 watts to reach every corner of the continental U.S. and to thwart the governments attempts to jam our signal", said Derdundat.

Not really. It shows that intensity effect percieved pitch and that
when
adding equal non reinforcing tones the results depart from what would
be expected.

What, to me at least, makes this even more interesting is the date the
research was published, Jan 1935.

In 1974 at college I took a course on the physics of music and musical
instruments. The course ignored the whole louder sounds sharp, softer
sounds flat issue.

Terry

I've decided I'm going to get one of those Timewave ANC-4 phasing
units, and when I get it, I'm going to use my HF-800 active whip as a
"noise antenna" along with the Wellbrook as the main antenna. I'll find
a nice, noisy spot outside for the H-800 and see what happens. I figure
the H-800 will be better at picking up the electrical noise than the
Wellbrook, which should facilitate phasing.

I hope this will be a long term solution to my noise problems.

We'll see what happens.

Steve

I'm going to reply to TWO of your posts at once..... "Woody"

"IF" the inspectors were to be believed, there was no WMD. But then again, as proven - the intelligence may have been flawed. SO, who DO you believe? WAR is a hell of a price to pay for a lie - regardless how started or perpetuated.

Oppression? Can we "actually" believe that? Those groups couldn't smuggle arms in - to try to break free of Saddam? His intelligence couldn't be any better than ours and we know ours has cracks. Seems nothing else can be believed. Going in - we've not done any better - there is more chaos there now than ever. More killing and NOT by "our" hands. There isn't a day you don't hear more have died - soldiers included - and usually by road side bombs, cars or buses filled with them, people wearing them. We're doing NOTHING to slow it down or stop it. Unlike some lame brain said, we did NOT "need" this war. We should have let them live as they want to live. Who are WE to shove democracy down their throats? They've lived that way for centuries, why change now? As long as "WE" aren't being attacked, why the hell should we give a damned. We wouldn't want THEM coming here to do that. Oppression? Some could even suggest with our own civil liberties being taken away - WE are being led in that direction to some degree.

Women and children? NO - by rights they should NOT be targets (popular "moral" thinking) - BUT - times are changing. There have been "reports" (believed or not) of women strapping bombs on themselves. And we know - that kids here in the U.S. are getting braver and braver. Doing things unheard of when we were kids. It has been said that the women and children in Viet Nam were just as dangerous - if it is to be believed. Women here are getting braver with crimes too. So..... they're not so "stay at home - meek and mild - dainty - mom types" - anymore.

I do NOT agree with war (unless attacked). BUT if you get into it by force or otherwise, you may as well "FIGHT IT" like you mean it. There is no backing down - then. We went in there bombs and missles firing. Hardly a life lost (on our side). It was when we got into the towns when we started losing them most - just as Saddam predicted. The enemy on the battlefield was easy to spot. Once in towns - forget it - you're surrounded and have no clue WHO they are or WHERE they are. If we hadn't backed off - this thing may have been over - with less lives lost on our sides at least.

Back to Lame Brain..... if war is "needed" then lets twist it around to make it more appreciated. IF we are attacked - then we NEED to go kick their ass and do it good - no holds barred. Make them realize they screwed up by doing so.

I find it interesting that MOST of our enemies have been "savages" in actions..... Not giving a damned if it was man, woman or child. I find it more interesting that we fight with kid gloves when it comes to finishing the job RIGHT. The Government always starts the shit, but then takes pity and pulls back the reins. THAT is when most of our people start getting killed. Yep "Black Sabbath's" "WAR PIGS" fits ideally here.

Rather than using attention getting statements that place results at the extreme why not take the time to tell us what you really think. Yes, if the country isn't really going to collapse then what will the problems be and what impact will they have. Yes, tell us what you think will really happen rather than using using unsupportably wild statements that project a collapse.

> Derdundat.

Not to mention the FCC would have swooped down on this fool like a
vulture on a corpse. What was he thinking?! And at 1610? He'd be
messing up reception of real stations at AM 1590, AM 16, and at 1620
and 1630.

Not to mention that to find a standard consumer radio that works
properly in that part of the dial is hard. Modern-day cheap stuff is
really iffy up there unless it's digitally tuned, in my experience.

Excuse me while I laugh my silly head off.

Huh? The topic was why the government was hiding the number of dead bodies coming into Andrews. Why are you off on a tangent and being a smart ass about stealth planes, SETI and Roswell? You are -evading- the topic. Please stay focused and try and explain why the government is hiding the number of dead bodies coming in. (and whatever does hiding the number of dead bodies coming to Andrews have to do with letting the enemy "know what's coming next")???

Anyway, thanks for demonstrating that you are not the brightest bulb in the box.

Sheesh.

Steve - I hope the ANC-4 works for you. I purchased one a few months ago from a guy on rec.readio.swap and it's like magic. Works great in my location with just the built-in whip. My receiver is a JRC NRD-525 and my antenna is an active antenna in the attic.

Agree completely that this looks on the up and up. The high bidder
looks real enough. The other bidder who has zero feedback initially
looked suspicious, but his bidding history looks ok. He bid on three
different SW55's all listed by different sellers. If the radio is in
the condition the seller says it is and if the buyer is willing to pay
the price then why not. It's the buyers money.

Contrary to what the original poster hinted at there is nothing wrong
with this auction that I see. But maybe the original poster will
respond back with specifics about why he feels this auction is
suspicious. Any one can assert the auction looks suspicious without
giving a reason.

> San Diego, California

Thanks Charlie. My tentative plan is to have a few different noise antennas ready for service, since my understanding is that no one noise antenna will be the best in all conditions. A simple indoor wire will probably be fine for capturing QRM originating from my own house. However, most of my noise comes from outside the house, from neighbors, power lines, street lights...the usual suspects. Dealing with this noise will involve a longer wire outdoors or the active whip (H-800) I mentioned earlier.

On the other hand, the H-800 might be too much antenna. Even if I put it in a noisy spot, it might pick up enough signal so that I end up nulling the signal in addition to the noise. If so, a smaller wire will be in order. In any case, I'm patient and I enjoy experimenting, so I'm not worried about finding the best noise antenna.

I'm tired of running from the noise. From now on I will stand my ground and say, "Bring it. Bring it!"

A few years ago,Roger Fredinburg www.regularguy.com emailed me.He said Art Bell once loaned him some radio equipment so he could get back on the air.Roger used to be on the air here in Jackson on FM 97.3 Roger once told me (via email) Roy Masterson's son (Roy Masterson and his son are both KOOKS) had him (Roger) kicked off the air on FM 97.3 Then later on Roger was on AM WMPQ here in Jackson.Along came ESPN (I HATE ESPN) with their full time crap and Roger wasen't on AM WMPQ anymore.

Jerry Hughes used to be on AM WMPQ years ago too.The only local Jackson radio talk shows I listen to are the Paul Gallo and JT and Dave (FM 97.3 www.supertalkmississippi) radio talk shows.Sometimes I will listen to C to C on FM 97.3 untill I fall asleep.I dont even turn C to C on unless there is a guest speaker (such as Douglas Hagmann www.homelandsecurityus.com) on there who has good sense and isn't talking any phoney baloney KOOK crap.Literally,I just can not stand the sound of KOOK Art Bell's and KOOK George Noory's voices,Period!

I really enjoyed listening to Roger Fredinburg's and Jerry Hughes's radio talk shows when they used to be on the air here in Jackson.

> power

.....
.....

Thousands of French radio listeners to CJWI 1610 Montreal, outraged over one Ben Derdundat's plan to operate a radio station that would interfere with their local station, are threatening to take back the Louisiana purchase lands. Ben Therdunthat, spokesman for the mob, stated, "Look at the mess that the crazee Americains have made of New Orleans! Alors! But this is the last straw: interfering with a French station! and with nocturnal emissions!" The plan is to invade the USA through the Mohawk reservation near Montreal, "cause the cops won't go near the place" with cartons of poutine. These will be distributed free through hamburger joints, and the sound of arteries snapping shut and fat-assed Americans falling to the ground will clear the area in about two weeks. You have been warned! War bulletins on CJBC 860 am.

Think nothing of it brother, I aim to please.

And per your request... I will attempt to get us back on topic....

I've got a nice Icom IC2100H I'd like to swap for a 50w Spectra in VHF.
Also have a Maxtrac 40w UHF 2ch I don't need.
Whatcha got?
thanks!

My bad for not being observant enough. Usually it's the LOCAL liberals
being bashed, rather than actual communists. Still don't know what
```

Islam-o-fascists has to do with it. For that matter, WTH IS an Islam-o-fascist? Seems like an oxymoron to me. The two words are incongruous. The people being referred to as Islam-o-fascists are nothing more than criminal control freaks using a religion as their raison d'etre. Sounds like the crusades or the inquisitions to me, except for one detail. The people we're dealing with now have no legitimate governmental power anywhere. They DO have a lot of followers..

This morning on their radio talk show,JT and Dave said earlier this year Jim Corteri (spelling) (that dude at the weather channel.I can click on the weather channel if I want to,but I dont watch those freaks on there) was on a beach in Maine.With that little flag behind him fluttering in the breeze.He was clocking twenty miles per hour winds! I have never been to Main before,but I think twenty miles per hour winds are pretty usual around there.

Those weather channel freaks are soooooooo uninterested that Ernesto isn't heading for New Orleans and the Mississippi Gulf Coast.

www.rigpix.com ADi AR-147.About two years ago,I bought a radio just like that at the Goodwill store for two dollars.The radio was still in the cardboard box with the microphone and the mounting bracket (bracket for mounting the radio in car or truck) and the unopened little baggy of mounting screws/nuts and bolts.The whole shebang looks brand new to me,I doubt if it has ever been hooked up and tried out before.Maybe someday I will get around to trying the radio out.

Thanks for the input.

Looks like antenna compliment will include the small Kaito active loop
I got with the radio, a roll of 16 gauge wire and a wrist rocket with
plenty of sinkers, and a homebrew 4' tuned loop that I can hopefully
resonate on 75m & MW too. I'm looking at some Loop plans now. Maybe a
Hula Loop.

Errr.... not sure how to answer that.... ? You're one really lost soul, bro.
You might wanna arm yourself before jumping into an argument.
Study the Qu'ran some, then come back. [You're maybe familiar with a
paraphrase of "Know thine enemy."??]

Nothing you've stated has squat to do with Islam as a religious practice.
Islam, as well as most Christian denominations are indeed a religion of
peace.
While the Qur'an is single viewpoint of a rather confused, self-proclaimed
prophet,
he speaks mostly of peace and love, just as the Bible does. Unfortunately,
there are many more
contradictions in his rendition.
At any rate, there are several branches/types of Muslims and
there is no mention of Honor Killings in the Qu'ran. Moreover; said killings
are specifically prohibited by the Sharia.
Those that practice it, do it against their own religious law, based on
their own interpretations of it.
Sound familiar at all??
If you're bored and want to see how wrong you are, just do some research.
While you're at it, you might wanna check into how many Christian terrorists
there are right here in the
good ol' USA, running loose right beside every other type of terrorist. Stop
listening to the media for once
and maybe get your own information.

Go stand near an abortion clinic, gay bar, or similar place. Won't be long
before some
mad Christian bomber shows up, killing in the name of God, in order to stop
the killing.
Just like our buddy Osama.... It's not about religion, it's about insanity.

One day, if you decide to pay any attention to what's going on around you
instead of making
random arm-chair assumptions
based on rumor, you may figure out it isn't the Muslim, Hindu or Christian.
It's the crazies bro, not their chosen religion....

Your Christian friend,
rb

Radio Content:
I'd swap 8 hours of insightful truth for a VHF, 40w, alpha display, Motorola
mobile.

Call your Congresscritter. Get 'em to propose a law against 'out of control bidding'.

You worry way too much about how other people spend THEIR money, and that means YOU have a PROBLEM!

you constantly tell me I have problems...

this, coming from someone whose whole life seems to be nothing but posts on an internet group.

I looked at the stats, you have over 6000 posts just on your CURRENT email address, I can't imagine how many you had when you were out of control insulting everyone in sight with your old email address. or are you using TWO email addresses now ?

so until you send me a letter from your shrink, I really can't take anything you say as coming from a sound mind....

OK, some quick research.... you also had the following posts under other email addresses

7/04 to 11/04 2600 posts
11/04 to 1/05 1300 posts

total of about 10,000 posts in a COUPLE years. sounds a bit dsyfunctional to me.

and....

I am sure that most of them were insults and attacks on people

How did you have the time to do that? I can hardly imagine you giving up the time to do that rather than checking for shill bidding and out of control bidding on eBay.

>

Real tubes, versus transistors...

Tube radios are at times referred to as 'hollow state' vs. transistor types being 'solid state'.

It's a street light. I found it last night. Took a little portable radio and walked out my front door. I turned the radio on and could hear the horrendous noise. I then attenuated the noise so that it was no longer audible, and started walking in one direction with my radio still turned on. After about fifty feet, I could hear the noise again and had to further attenuate the signal so that it was just below the threshold. After another fifty or so feet, I could hear it again. I knew I was zeroing in. I repeated this process until I was standing in front of a street light that was generating such gargantuan amounts of RFI I could almost hear it with the fillings in my teeth.

This thing is a monster.

So, this morning I called up the NYC Dept. of Transportation, whose job it is to maintain street lights. I reported the location of this problem, and the person on the phone told me that several people had already called about it. They said they'd get to it as soon as they can...I hope it doesnt' take too long.

It actually surprised me that others had reported it, since the noise is all on the shortwave bands and the light itself looks normal. I think the problem is a short circuit underneath the light. That happens a lot.

Sometimes they have bad starters. Most of the time around here the problem is
bad lightning arrestors, but every now and then a light goes bad.

>Hi Harry,
While I have never done a backlight for the Racal, I have done numerous Lowe HF-150. There, the procedure involves removing the foil backing from the display while being careful not to remove the polarizing film that lies directly beneath the foil.
Next a plexiglass sheet the size of the area to be illuminated is uniformly sanded on one side with very fine grit paper- the idea is to frost the surface allowing light to escape from this front surface. A pair of slots are milled into each end of the sheet that will allow a T1 3/4 LED to press fit in (each LED will be "looking" towards the middle of the sheet). Finally an Avery self adhering white label is adhered to the back side of the plexi sheet. I also polish all edges so that light will only escape out the frosted front. The sheet is finally sandwiched between the back of the display and its socket.
Here is a Lowe HF-150 after backlighting:

Rï¿½al Effenloser, government spokesperson in Montreal, announced this morning on CJBC that all French forces have dropped their weapons
(but kept the poutine) and returned home after realizing that the Mohawk bands posed too much of a threat and that an invasion of the
USA would not be a success.

Environment CanaDuh expressed concern over the number of white flags that were left littering the region.

It's the lying that bothers most of us, I bought a radio from him and it smoked when I plugged it in, upon examination, I found it was NO WHERE NEAR what he described, he used photos that didn't show the imperfections and outright lied about the ownership. I know several people who have sold gear to him (using his gottahaveit1995 name) only to see radio-mart sell it a week later, claiming it came from his personal collection and had owned it for years!! Then he lies about the condition of it, not to mention that he shill bids on his gear using the above mentioned gottahaveit1995 name. This asshole needs to be run off ebay, because of how he screws unsuspecting bidders!!

3700. Software DSP audio filter programs versus hardware audio filter DSP units

Newsgroup: rec.radio.shortwave
Date: 2006-08-29 14:32:35 UTC
From: Gabriel Rapture <enraptured@charter.net>
Message-ID: <edj8f2d976fd8epvtvdnlsbhkl32cm0ukc@4ax.com>
Source record: 89862

Genty,

How do the software DSP audio filters like "Swezey Audio Filter" and GNASP1 audio processor compare to hardware DSP's like the "Gap Hear it inline module"? Or the Timewave and others featured on the link below?

http://www.universal-radio.com/catalog/filters/3470.html

I can tell that the Swezey is much better than the GNASP1 because I compared them for several hours, but I have never seen of the modern hardware units.

Thankee

What I see is someone who wants one of these radios, nothing more, nothing
less... Did you bother to do a "search by bidder"? Bet not. Just because
someone has a zero feedback doesn't make them a shill bidder.

Check his bid history for yourself. This individual has bid on three
different auctions, by three different people, for the SAME model radio.
Research before you accuse! Not researching makes you look like the
dumb-ass in the end!

Not necessarily so.

Just put implants in "white" people. The hard truth is that they are
the only ethnic group in Amerikkka that goes around blowing up stuff.

Black people have never blown up anything in the long history of this
country.

Whites on the other hand can be proud of the Oklahoma building,
abortion clinics, the Atlanta Olympics, the uni-bomber, Dynamite Bob,
suspected of destroying the WTC, and tens of thousands of other
incidents. They love blowing up stuff on the 4th of July. They love
blowing each other.

In the construction industry, the people who blow up things are 100%
"white"

They are the real terrorists, and they are the ones who should be
monitored 24/7/365

Let the rest of us decent Americans live free and unfettered!

Need I say more?

3712. Question about my RF signal generator

Newsgroup: rec.radio.shortwave
Date: 2006-08-29 16:56:50 UTC
From: FLjeffbeach@bellsouth.net
Message-ID: <1156870610.868797.28260@m73g2000cwd.googlegroups.com>
Source record: 89874

Last night I ran the generator and managed to pick up a signal without an antenna attached. I tried this once I first purchased it to no avail and was repeatedly told I'd need an antenna for it to work - but not only did it broadcast a signal on the target frequency, 144.445, but I could pick up the signal on over 30 other frequencies, ranging from 144.120 to 145.645 - and the signal was very strong on certain frequencies.

I thought generators could only send one signal out to a select frequency, not dozens to dozens of frequencies. And the scanner is located in the same room as the generator, so atmospheric conditions between antennas have remained the same ever since I started the experiments. In addition to that, how could it work without an antenna attached, since the telescoping antenna has to be measured out the desired length to transmit at the desired frequency? When I did attach the antenna the signal was stronger of course, but it still broadcast at the target frequency (and the other frequencies) no matter what length I put it at. Any plausible explanations for either occurrence?

Jeff

Hi everyone,

For those of you who think that EVPs are just people hearing voices in static that really aren't there, visit my site at http://www.friendly-ghosts.com. I have loads of full fledged voices that everyone can agree on what they say. The best ones are in the Bijou Theater section, and next best are in the Rogersville Haunted House investigation section. Here are a few good examples:

I wish we could do that:
http://www.friendly-ghosts.com/bijou/iwishwecoulddothat.wav

Get back (comes in over an investigator talking):
http://www.friendly-ghosts.com/bijou/getback.wav

This time let's take a quick shower.. The shower's cold
http://www.friendly-ghosts.com/bijou/theshowerscold.wav

About time, help me! (Spirit aparently trapped in a small room, got EVP when I went in the room):
http://www.friendly-ghosts.com/bijou/abouttime-helpme.wav

Let come come out (Same spirit in the same room 36 seconds later):
http://www.friendly-ghosts.com/bijou/letmecomeout.wav

They call me Gritch (after I asked the names of the entities in the room):
http://www.friendly-ghosts.com/bijou/letmecomeout.wav

Spirit makes a joke after someone says, "Someones ringing", and I say, "not me", then there is an EVP that sounds like, "Why is your foot down", and then, "Is there a problem", and then the really funny part, an EVP that says, "I'm not ringing". (This one isn't the best quality EVP, although it is still pretty easy to hear, I am just listing it for content.)
http://www.friendly-ghosts.com/bijou/imnotringing.wav

I said "Hey" to get a girls attention, and this spirit thought I was talking to him and replied, "Hello":
http://www.friendly-ghosts.com/bijou/hey-hello.wav

Hope's gonna get supper:
http://www.friendly-ghosts.com/bijou/hopesgonnagetsupper.wav

I was trying to get a spirit to come out for me to get a picture of him. I was asking him to come out, and got this EVP, "He come come out there":
http://www.friendly-ghosts.com/bijou/hewontcomeoutthere.wav

I say, "Frosted window" (commenting on a window in the restroom), and then comes the EVP, "Squeaky Window". (Only I and Adam were in the restroom, or on the entire floor for that matter. There were no living ladies.)
http://www.friendly-ghosts.com/bijou/squeekywindow.wav

I am talking to an employee of the Bijou theater about where I thought they used to take money from the men that wanted to see the ladies (it used to be a brothel), and he points out that where the window opened up to was an old restroom. Then came this very clear EVP, "I can't please the restroom". Aparently she was making a joke.

Investigator says, "Wild and creepy" about something, and an entity repeats him, "Wild and creepy"

I feel sorry for you:
http://www.friendly-ghosts.com/bijou/donna/ifeelsorryforyou.wav

Researcher: "Is there someone here who would like to communicate with us", and the very clear response, "Hell no"
http://www.friendly-ghosts.com/bijou/robert/hellno.wav

There's lots more extremely clear EVPs on my site, too. As you can hear if you listened to these, the voices are very clear, not hard to make out. They are in direct response to questions or situations many times. To anyone who gives any thought to it, they will realize this can't be stray radio waves, the brain trying to make something out of static, etc. It seems quite obvious to me that it is the voices of spirits.

Thank you Sean for giving us those links. Unfortunately the computer where my files are archived are at my house and not on this computer. I will try to transfer them as well.

I think it's important for people to realize how phenomenal EVP is - not a hoax, not an AM station, and definitely not voices in our head.

Exactly! Especially when the motive behind blacks burning something
down is usually frustration and anger at white people for their
extreme White supremacist behavior towards people of color.
I'm really amazed at how peaceful blacks are for the most part. If
whites were treated in such a savage manner every day, this entire
country would blow up, or be burned down.

Like I said though when it comes to mass destruction, like the atomic
bomb, the hydrogen bomb, the cobalt bomb, whites are light years more
destructive than anyone else.

Do you remember that white kid in the Michael Moore documentary
Bowling for Columbine" who was angry because he was only number two on
his schools list of terrorist students. He loved to make bombs too,
and he wanted to be number one.

Lord, please come back, have another Passover and take away all of
these ignorant, savage, devilish, hate mongering, i'm going to kill
you if you aren't white...beasts! They are making the earth a evil
place for everyone.

Over the past 4 plus years we've already dropped the bombs, fired the rockets and launched the cruise missiles. What we have to do now is figure out how to get out of the middle east and some-how control the thousands of Osama Bin Laden look-alikes we have created by invading countries we should have never entered in the first place.

I have some tape recorders (one of them is a micro tape recorder,it has a two speed slide switch on it,on low speed,it will record over three and a half hours on each side of a micro cassette blank tape and I also own an RCA six hour digital recorder) here and some high quality cassette tapes I haven't even used yet.

Next time I go to the Goodwill store (I usually hang around there for an hour or so) and then on to the food store.(all together,I am usually gone for about three and a half hours when I go to the stores) Do you mean to say if I put a blank tape in one of my recorders (of if I use my digital recorder) and of course my radio and tv set will be turned off,my recorder(s) will pick up sounds/voices?

If you go where they are spirits and they are talking, and your particular recorder is prone to picking up spirit voices (EVPs) (which many are), then yes, you will most likely get their voices on the recorder. It isn't an exact science, though. Some recorders pick up EVPs better than others, some locations are much better at recording than others, and you need to be good at listening to hear some of them. (It is best if you can hook your recorder up to the computer, download the contents and then play the audio through headphones and listen carefully.) As an example, if I go to the Bijou theater in Knoxville with a Sony ICD-B16 digital recorder, I can record and interact with spirits any time. If I try to do it at my house, even with a Sony ICD-B16 recorder (which is a very good recorder for this), I won't get anything since my house isn't haunted (unless something just happens to be passing through.) Also, if I go to cemeteries, I can usually get some EVPs (although not every trip, but most of them), but the voices from the cemeteries are usually more of a whisper type instead of full fledged voices from my experience. At the haunted house I went to in Rogersville, TN and the Bijou Theater in Knoxville, TN, there is just pretty much non-stop full fledged voices that were not heard at the time of the recording.

Yes, most grave yards have some spirits in them. I don't know if your liquior store would be too good of a choice since I don't think they carry the right kind of spirit. Any known haunted locations. In terms of hooking it to the computer, that isn't while recording, just download the audio to the computer when you are done to review it. If you have the proper software, you can easily go back if you think you heard something, etc. If you don't have such software, you can listen through headphones on the headphone jack of the recorder.

Scanners are notoriously over-sensitive. You need to get the receiver
away from the generator. Read the Part 15 advisory.

You don't need a missile to nuke the USA. A cargo container will do
just fine.

3747. Question about the Timewave ANC-4

Newsgroup: rec.radio.shortwave
Date: 2006-08-29 22:58:46 UTC
From: Steve <sdaniel13@speakeasy.net>
Message-ID: <1156892326.699842.248080@h48g2000cwc.googlegroups.com>
Source record: 90009

I have a question about how the ANC-4 works. Specifically, it's about the antennas that you connect to the ANC-4 in order to cancel noise or make a 'phased array'.

In some contexts, when noise is a problem, people will say that you want to keep the "noise antenna" that you use with the ANC-4 as small as possible. This is because you want the noise antenna to hear *only* the noise, which will be phased out, and not the target signal, which you don't want to be phased out. The suggestion here is clearly that, if your noise antenna *does* hear the target signal, you're going lose signal along with noise.

However, when people use the ANC-4 to establish phased arrays of two or more antennas, this is usually with a couple of serious antennas, widely separated, *both* of which can hear the target signal. Hence my question: When the ANC-4 is connected to two largish antennas, both of which are capable of hearing the target signal, what prevents the desired signal from simply being phased out? Is determining what gets phased out just a matter of carefully adjusting the controls on the ANC-4?

Thanks!

Steve

Hello All:

Total newbie to SW and radios in general but just bought an E5. A couple basic questions:

1. What's the most effective way to use the external antenna that is included? Simply string it out the window? Up the roof line?

2. Any info sites you recommend? I've already found RadioIntel, Universal Radio, DXing.com and this newsgroup. I hope you're a friendly lot!

TIA

Here's a clue for you, Sparky: Damn near EVERYBODY who blows shit up
and burns shit down thinks that his/her "people" are being oppressed
by some other group. Just ask 'em.

>I'm really amazed at how peaceful blacks are for the most part.

Uh-huh. Rwanda, Somalia, Sudan ... Yeah, they're all hugz'n'kisses.

Grow up, Sparky. There are people in every ethnic group who are
willing to kill a lot of people in order to get what they want. Those
who are well educated in modern technology will be the most effective
killers.

OK - So here is the Dak Industries Station Stalker Shortwave Radio Antenna which appears to be a "Clone" of the Radio Shack {Realistic} Amplified Shortwave Antenna -or- Just may be the RadioShack {Realistic} Amplified Shortwave Antennas are "Clones" of the Dak Industries Station Stalker Shortwave Radio Antenna - One Wonders . . . . . .

eBay Auction Item # 120026114753
http://cgi.ebay.com/_W0QQitemZ120026114753

Oops with a starting Bid {Price} of $50 plus $10 S&H someone may be saying Oops I Payed Too Much ! ~ RHF

The eBay Sell claims :

* RARE ITEM, NO LONGER IN PRODUCTION, HAS BEEN DISCONTINUED FOR YEARS!
{ Rare I Don't Think So . . . }
* DAK INDUSTRIES STATION STALKER AMPLIFIED SHORTWAVE RADIO ANTENNA
{ Hey - That Is True ! }
* BRAND NEW, IN-THE-BOX, HAS NEVER BEEN USED!
{ Looks like a plain generic cardboard Factory Reconditioned Product type Box }

FYI - The RadioShack {Realistic} Amplified Shortwave Antennas usually go for about $25-$30 plus shipping in the $6-$8 range.

hello - ebay - it is what it is - as always 'buyer beware' ~ RHF

Message-ID: <9O4Jg.4705$q63.158@newssvr13.news.prodigy.com>
Source record: 90035

Hello geeman,

As to the antenna, best I can say is *experiment* <G>. That's part of the fun in this hobby. Trying different configurations. And sometimes, what works today, may be totally silent tomorrow. That's from experience.

Look up "Monitoring Times" on the web (also a *great magazine" for the hobby). One list on their sight is the *Hot 1000* IIRC. I'm not familiar with the E5. Does it have SSB (single sideband) capabilities?

If you get the Monitoring Times magazine, it has a section that goes hour by hour for 24 hours, listing broadcast stations in English on shortwave. Sort of a TV guide for shortwave.

Welcome to the world of Shortwave Radio. If that radio has SSB, you can get Ham stations, Utilities (ships, planes, etc.). On AM there is the Broadcast Stations, some Ham, and CB. And it goes from there....

My first station, many years ago, was Radio Australia with a 30 foot hunk of wire just thrown on the roof. (Didn't know it was a powerhouse station then), but what a rush hearing that accent, and knowing it was from a different part of the world.

Again Welcome!!! Hope you find most of us friendly and helpful. And just remember, the *only* stupid question is the one *not* asked. I've seen questions here that I didn't know the answer to and was glad someone asked, because it got me learning new things. So ask away!!!!

Happy Listening,

Eric

Two better ones in my opinion:
SR5 (free) at: http://www.ar5.ndo.co.uk/ Outstanding noise reduction
almost comparable to my Timewave DSP-599zx
RXPlus (pay) at: http://www.cam.org/~noelbou/RxPlus/ This is a receiver
control program with dsp audio processing built-in and you also get a stand
alone dsp audio processing program wit your purchase.

Make more?? Hell no. We still have more than enough to destroy the entire
world multiple times over. A legacy of the Cold War.. some legacy.. Mutually
Assured Destruction..

A small loop like the one you built is a classic H field sniffer I have used to look for RFI problems in switching power supplies. You could also build a short E field sniffer antenna by extending the center conductor of the coax a few inches (about 3 inches would be good). Use shrink sleeve over a heavy gauge wire would make a good E probe.

I thought I read somewhere that this is going to change in the near
future, that a portion of the band is supposed to go back to exclusive
ham use.

Thank you Bob. I'm not a homophobe myself so I'll ignore the peripheral comments. After a few days of lurking I've already killfiled a few individuals. I just want to enjoy my new radio.

I have fond memories from childhood listening to distant AM stations in the family car many a late night. I've always found it quite fascinating. I realize it's a dying technology but heck, we're all talking on "newsgroups" which ain't exactly the cutting edge of the information age these days. Most have moved to web-based forums. I like to think there's a slightly more literate bent to the newsgroup crowd but I'm often proven wrong.

Thanks again.

Thanks Eric. The E5 does have SSB. So here's one of many dumb questions to
come. If I have SSB do I also have LSB and USB? I've read the definitions of
both as well as SSB but am still a little unclear. For example, a listing I

have from DXing.com reads: "This band is mainly used by aeronautical stations in USB." Is the single-sideband capability referring to the fact that I can receive just one "side" of the carrier wave, either USB or LSB, and filter out the other side depending on which "side" is actually carrying the signal?

Thanks for the tip on Monitoring Times. I actually found that one too but forgot to mention it. I didn't poke around enough to find the broadcast listings but I will definitely check it out. Thanks again.

Today I went to a second post office to try to get some international reply coupons but they were also out. I went to usps.gov to see if they are for sale online but they're not. But I learned that new IRCs are coming out on the first of September, and the new price is $1.85. I found this webpage which explains the issue nicely:

An international reply coupon primer: http://www.n6hb.org/s-a/irc.htm

The main force of Katrina was East of New Orleans and it hit the Mississippi Gulf Coast,wipeing Waveland and a couple of other Mississippi cities completely off the map.As bad as Hurricane Cammile was (www.devilfinder.com Hurricane Camille) in 1969 was,Camille didn't blow three trees down across the street I live on and blow ten shingles off of the top of my house,Katrina did and I live about one hundred and forty miles North of the Mississippi Gulf Coast.

Katrina had the seventy foot tall pecan tree in my front yard dancing around at the base of the tree,at ground level,like a drunken wild Indian,I saw it myself out my window.Katrina caused that tree to lean toward the front of my house.A few months ago,I had that pecan tree and another pecan tree just like in my back yard near my house cut down and hauled off.Yesterday afternoon,the guy across the street from me was sitting in his front yard and looking up at that big tall tree in his front yard near the corner of his house,like he was looking at a ufo up there.I wonder what he was thinking on this anniversary of Hurricane Katrina? www.clarionledger.com Katrina Book.Or do a www.devilfinder.com for The Katrina Book.You ain't seen nuttin yet!

> out the other side depending on which "side" is actually carrying the
> signal?

< Snip >

The word band has a different meaning depending on context.

When speaking about SSB, USB, LSB the inference is a range of frequencies below (LSB) and above (USB) a stations carrier frequency. This range of frequency is defined by the information that modulates the carrier and so it is a small range of a few kilohertz wide. Here USB and LSB are the sidebands of the carrier.

When speaking about a range of frequencies that by regulation are used for a specific purpose such as aeronautical communications is a wider range of frequencies that will accommodate many carriers or stations and is more like 100 to 500 kilohertz in width.

Stations that broadcast in SSB mode usually only modulate one sideband upper or lower. If your radios has a switch for USB / LSB then you will have to pick the correct sideband to hear it. If your radio does not have that switch you just turn the BFO control in one direction for USB and turn it in the other direction for LSB.

You took the words right out of my mouth. : 0

Seriously, band in my example was your second definition specifically the
3400 to 3500 kHz frequency range.

So, is it accurate to say with my unit, which only has a button to switch to
SSB, I need only select SSB, start tuning, get a decent signal and turn the
BFO up (USB) or down (LSB) to resolve the transmission? When you say BFO, am
I wrong in thinking you're simply referring to the "Fine Tuning" dial I
have on my unit which must adjust in finer increments (frequency readout
does not change but differences in audio can be heard) than the Tuning dial
itself (1 kHz increments)? Otherwise I don't know what BFO is. I looked it
up and "beat frequency oscillator" seems to be a way to resolve an audio
frequency signal for a carrier wave (a fancy way of saying tuner?).

- If I am out of the official AM band (540 kHz-1700 kHz) should I always be
in SSB?

- What is the effect of the Wide vs Narrow switch and when should you use either? The manual that comes with the unit bascially identifies these controls but not necessarily their effect on reception.

Sorry about all the newbie questions. I learned a ton just looking up BFO and the related references in different places so thanks for that one even if I didn't get it. I like to understand things which is why I started this damn note two hours ago and am just now finishing!

Contrary to what the original poster hinted at there is nothing wrong
with this auction that I see. But maybe the original poster will
respond back with specifics about why he feels this auction is
suspicious. Any one can assert the auction looks suspicious without
giving a reason.

there is no ethics involved here.

now a true ethical question:
can an unlicensed person using radio technology to violate part 15 still
be in violation if he had a ham license (we're talking about using 802.11A
at full power for a 10 mile shot folks!).

Source record: 89938

Hi,

I am repairing a Grundig Satellit 500 radio which has suffered failure of one of the two Sony CX7961A-1 PLL ICs used in this and similar late 80s-early 90s Grundig and Sony contemporary radios. The symptoms are the radio appears to work in every other way, but no stations are received. I have had great trouble locating a source of small quantities of these ICs available at a reasonable price.

Although a web search will return many hits, these turn out to be IC sourcing agents with high minimum quantity and order $ thresholds.

OK, the Satellit 500 may not have been the ultimate radio in performance but I find the tone and general quality of these radios appealing for general listening rather than chasing ultimate DX and want to repair it if possible.

If you know of a source of small quantities of CX7961A-1 ICs, I would greatly appreciate hearing from you.

-satellit-boy-

Most hammies I've met at hamfests and other venues would
likely blast-away with wincing faces and shi+-eating grins even
if the Queen of England was present in the room. Hams, for
the most part, have no class, poor social behavioural skills and
in general dress like bag ladies.

Actually, I thought that we got rid of quite a bit in
the 13 years since we initiated the program.

This part was also used in the Radio Shack DX-440/Sangean ATS-803A
receivers.

Radio Shack has it listed in:
http://support.radioshack.com/support_electronics/doc21/21364.htm

(look at the far right hand column) as part number 10870871;
toll free number to order is 1-800-843-7422.

Note that this list was generated over a year ago so it may no longer be
available.

Good luck!

Regards,
John

In looking at the picture of your radio at Universal Radio's site, I
see there is a SSB fine tuning control (knob 42). You would simply
adjust that knob back and forth for the best sounding signal. On other
radios, there is often a switch to choose the USB and LSB modes.

http://www.cnn.com/2006/WEATHER/08/29/wake.island.evac.ap/index.html

HONOLULU, Hawaii (AP) -- The U.S. military has evacuated 200 people from Wake Island before the arrival of Typhoon Ioke, the strongest Central Pacific hurricane in more than decade.

Classified as a Category 5 "super typhoon," Ioke is expected to extensively damage the U.S. territory when it hits Wednesday with 155-mph winds, said Jeff Powell, lead forecaster for the National Weather Service in Honolulu.

"This is going to roll up a storm surge that will probably submerge the island and destroy everything that's not made of concrete," Powell said.

Let it out in morse code! People will look around to
see which radio it's coming from and you'll remain
undetected.

>phased out just a matter of carefully adjusting the controls on the
>ANC-4?

A noise bridge works by subtracting the noise from the signal. (The
adjustments work by making the time delay, the polarity, and the amplitude
of the noise antenna signal to be the same as the noise coming in on the
main antenna so it can be subtracted). Thus forming an antenna that,
electrically, looks like the difference between the two antennas. So,
to work, you need two antennas that receive the noise and desired signals
in different ratios.

Say, you have a main antenna that picks up signal and noise, and you
have a noise antenna that picks up 10 times as much noise as the
signal. After you adjust your noise bridge to match the amplitude,
the desired signal on the noise channel is only one tenth that on the
main antenna, and that's all you'll lose.

You can get this different noise-to-desired ratio by either putting the
noise antenna as close as possible to the source, or using a directional
antenna. As I remember another poster there, (Ron Hardin?), it often
works better to use a loop to null out the desired signal and just get
the noise and then use the ANC-4 to combine that with another antenna.

>
> Environment CanaDuh expressed concern over the number of white flags that were left littering the region.

At a briefing this morning, returning members of the "Force Frappe" were cheered for their victory over the elusive Ben Derdundat. On gathering in the Mohawk longhouse south of Montreal, the task leader, Bjorne Toulouse, spied an attractive Mohawk maiden and said, " Je t'adore." This was misunderstood by one of the English-speaking Mohawk warriors, who the shut the door to the loghouse and secured it. This led to a traditional courer-du-bois party where new French-Mohawk alliances were formed, as in the old days. The Mohawk strike force was led by Tonto Goldstein, who knew the territory well because of his flourishing import/export business based in the Caughnawaga reservation. The strike force was headed by the FBI (effing big indians) who are all 6' 8" tall at 250 lbs. The French approached the startled burghers of New York with a tempting meal of snails, frogs legs, and poutine, but sensing danger, the burghers fled, dropping their serviettes on the ground. Seymour Butts, of Homeland Security, used these servittes to determine a body count of the invaders, which totaled 1776, with no losses to the US side. Encouraged by this, Congress voted themselves a raise which passed unanimously at 3 am. Racing ahead, the FBI hit squad caught the fleeing Ben D. at Coxsackie, NY where they dangled him above the Freeway at which point he promised to abandon the his idea of the 1610 am station. Tony Von Thinkett, regional head of Homeland Security, on hearing that the FBI was on the case, ordered his forces to stand down, thinking it was an exercise. All French/indian forces returned quickly to Quebec. Compliance officers were appointed. They can be spotted by the motto, "Je Me Souviens" which appears on their Quebec license plate. Readers are asked to monitor am 1610 steadily to make sure there is no future violation.

KRAB, 107.7. Tad Cook, the guy who does the ARRL propagation notices
worked there.

Now it's KKND, The END.

A rather nasty sell out and looting. 107.7 is a commercial frequency and
the board of directors of Jack Straw Memorial Foundation (?) sold the
station out from under the volunteers and other various strange folk who
ran the place, and then years later set up a station with much reduced
coverage out of Everett. But they were going to do such good things with
the millions of dollars they got for it...

I didn't look up any rules or sections of law anywhere, so I guess I'm answering a question blindly. I'm in Canada, but I felt compelled to answer even if I misunderstood the question.

I believe that government has written into law that a licensed ham should only use the power, or enough power required or necessary to communicate. Ten miles down the road is not a really great distance, contrary to what some CBers think, so maybe you could still use smoke signals to communicate unless you are then violating pollution-control laws, and or harming the tree environment/ecology system of the area by burning code into the sky.

I think that this part of the law still stands in Canada....that one should only use enough power to communicate whether it be an emergency or not.

If I missed your intention by 10 miles, please ignore this post. Thanks,

Jack

Apple Computer subcontractor sues journalists for critical report on working conditions

(RSF/IFEX) - The following is an RSF open letter to Steve Jobs, Apple Computer CEO:

Dear Mr. Jobs,

Reporters Without Borders, an organisation that defends press freedom throughout the world, urges you to intercede with your [IPod] subcontractor in China, the Taiwanese company Foxconn, and get it to drop its lawsuit against reporter Wang You and editor Weng Bao of China Business News (Diyi Jingji Ribao).

These two journalists were responsible for an article on 15 June criticising work conditions at a Foxconn plant. At Foxconn's request, the Shenzen intermediate people's court froze their assets - apartments, bank accounts and cars - on 10 July. Foxconn then brought a lawsuit accusing them of "smearing its reputation" and demanding 30 million yuan (3 millions euros) in damages.

We know that Apple is already aware of this case. After the London-based Daily Mail newspaper ran a story about it on 11 June, your company reacted by investigating conditions at Foxconn's plants and discovered that your supplier had indeed violated several aspects of your code of conduct, including those concerning the length of the working week and days off.

We believe that all Wang and Weng did was report the facts and we condemn Foxconn's reaction. We therefore ask you to intercede on behalf of these two journalists so that their assets are unfrozen and the lawsuit is dropped.

We trust you will give this matter your careful consideration.

Sincerely,

Robert M��nard
Secretary-General
Reporters Without Borders

3855. The Truth About Katrina

Newsgroup: rec.radio.shortwave
Date: 2006-08-30 17:56:20 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12fbk9rcn87n676@corp.supernews.com>
Source record: 89965

You remember nasty Katrina.

One year ago Tuesday, she violently spiraled into the Gulf Coast, killing more than 1,800 people, destroying 353,000 homes, doing $81 billion in damage, drowning 80 percent of New Orleans and setting off a circus of media hysteria, political finger-pointing, racial recrimination and myth-mongering that embarrassed us before the whole world.

No thanks to the electronic media, the American public was left with a distorted view of what really happened before and after Hurricane Katrina hit.

Remember those initial shocking TV reports? New Orleans consumed by anarchy? Rescue helicopters shot at? People by the score being raped and murdered in the Superdome and convention center?

None of it was true. Looters were common. But violent crime was actually rarer than usual.

How about the government's slow response time? Another myth. Within three days, 100,000 emergency personnel arrived on the scene from state, local and federal sources and rescued 100,000 soaked souls -- making it arguably the largest and fastest rescue effort in U.S. history.

As for the mass evacuation that supposedly didn't work, 1.2 million of metro New Orleans' 1.5 million people left town before Katrina hit. It took 38 hours -- 34 fewer than expected. Most who stayed behind chose not to leave.

At first the media-driven blame game was simple: President Bush and his cronies at FEMA didn't care or respond fast enough. Later the most culpable pols -- New Orleans Mayor Nagin and Louisiana Gov. Blanco -- were fingered.

But the real culprits were not individual politicians but government and bureaucracy. At nearly every step and turn, it was hapless public-sector players that either caused problems or made them worse.

The city government -- congenitally corrupt, broke and clueless -- was ill-prepared for Katrina or became paralyzed in the clutch. Likewise the slimy Louisiana state government, which despite decades of warnings failed to upgrade the levees.

As for the feds, FEMA was a joke long before Katrina flooded New Orleans. So was the U.S. Army Corps of Engineers, which has spent the last 100 years messing up the natural flow of the Mississippi and which designed and built the storm walls and earthen levees that failed and flooded New Orleans.

Miraculously, the Corps admitted its incompetence in June, albeit in stereotypically bureaucratic fashion -- by issuing a 6,000-page report that

cost $19.7 million.

New Orleans, by all accounts, from Time magazine Spike Lee's HBO documentary, is still in sad shape. Despite billions in federal aid, despite myriad promises and plans, despite the hard work of thousands of good people, more than 113,000 humans still live in FEMA trailers and 60 percent of New Orleans' population lives elsewhere.

The poor city is a skeleton running on federal handouts. Its leaders are still arguing about what neighborhoods to redevelop and how. The Army Corps is still not done repairing the levees, which will need many years and many more billions before they can even stand up to another relatively weak Category 3 like the tragically well-aimed Katrina.

Meanwhile, as the public sector dithers and squabbles and plans its next fiascoes, Mother Nature will be perennially brewing up new catastrophes that could put wounded New Orleans under water again for good.

That would work to attenuate the VHF-FM band only but is probably
rather pricey and will kthelp if you have images from VHF aeronautical
band et al from 108-120 MHz. Look on ebay for ham/CB TVI low pass
filters designed to pass everything below 30 MHz and to attenuate
above. Here's a search URL:
http://search.ebay.com/search/search.dll?&satitle=low+pass+filter&sacat=1500%26catref%3DC6

Good luck,

Tom

back in the 1930s?

3866. Redsun RP2100 more

Newsgroup: rec.radio.shortwave
Date: 2006-08-30 18:49:36 UTC
From: John Plimmer <plimmer@telkomsa.net>
Message-ID: <ed4n7e$sh9$1@ctb-nnrp2.saix.net>
Source record: 89978

More to my original post on the Redsun RP2100 after further use.
MW mediumwave reception on the BCB band still amazes me with it's clarity and sensitivity. Regular reception of stations that are 5,000 miles/8,000 kilometers away with good readability is possible on a regular basis. The local
stations that are 700 miles/1,200 kilometers away simply boom in with great sound and clarity. Very impressive on a portable with only a ferrite internal rod. Provision is made on the back for the connection of a longwire antenna to a 500 Ohm post, also a ground/earth connector, but I have not tried this as reception on the internal ferrite rod is so good.

FM band. The most powerful FM receiver I have owned is my Drake SW8, but the RP2100 is quite a bit more sensitive on the internal whip, and the marginal long distance signals are a lot clearer. It leaves my GE SRIII and Sangean 818 in the shade.

Connecting to AC mains. This works seamlessly and cuts off the battery and a mains indicator appears on the LCD display. Only snag is that this introduces a lot of RFI hash onto the MW band and makes the more distant stations unpleasant to listen to. It doesn't seem to affect the FM or SW bands at all though.

Connecting a powerful 50 Ohm antenna for shortwave. I have a RF Systems DX-1 Pro active antenna which produces a very strong signal to the receiver. If I connect this to a portable it overloads it badly and even risks blowing the front end FET's. I connected this to the 50 Ohm input of the RP2100 and enjoyed
amazing SW reception with NO signs of overload at all. Compared with my much more expensive tabletop receiver the RP2100's performance was impressive and on many stations the RP2100 was preferable to listen to because of its warm wide spectrum sound compared to the rather tinny and shallow sound of the tabletop.

The RP2100 is no tabletop though as it does not have the extensive facilities of my big Icom to clear up various forms of interference. All you can do is narrow the bandwidth and offset the frequency slightly either side to rid yourself of the interference, but often this is not sufficient. Actually, having owned a Kenwood R1000 for awhile, I think the RP2100 would substantially outclass it!

The 50 presets/memories have driven me Harpic, that is clean round the bend, so I no longer use this function. You see, if your favourite station is on preset 1 and you have been tuning around, when you want to go back to your favourite station and press the preset button, it will go up one, so you end up on preset 2. You then have to press the preset button another nine times to get back to preset one. That's annoying and time consuming, so it is

faster to use the excellent "Q tune" function button to get quickly around the dial to where you want to be. Q tune jumps one segment up the shortwave band at each press, and the fast tuning knob will take you quickly to where you want to be.

Altogether by far the best portable I have ever owned, including my Sony 2010. Very satisfying performance and excellent value for money at just over $100.

Just when I thought I had bought the ultimate, on the way is a mouthwatering Redsun RP3000. This upcoming receiver looks the same as the RP2100 but with a few button changes on the face, but is said to offer:
Air band for aircraft
numeric keypad
1000 presets
sideband selectable synchronous detection

3868. If Today's Media Reported the Battle of Midway

Newsgroup: rec.radio.shortwave
Date: 2006-08-30 18:57:12 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12fbns2nuhcoodc@corp.supernews.com>
Source record: 89977

If today's media reported the Battle of Midway this is how it would read:

Midway Island Demolished. Yorktown, destroyer sunk.

Many US planes lost

June 7, 1942
The United States Navy suffered another blow in its attempt to stem the Japanese juggernaut ravaging the Pacific Ocean. Midway Island, perhaps the most vital U.S. outpost, was pummeled by Japanese Naval aviators. The defending U.S. forces, consisting primarily of antique Buffalo fighters, were competely wiped out while the Japanese attackers suffered few, if any, losses.
In a nearby naval confrontation, the Japanese successfully attacked the Yorktown which was later sunk by a Japanese submarine. A destroyer lashed to the Yorktown was also sunk.

American forces claim to have sunk four Japanese carriers and the cruiser Mogami but those claims were vehemently denied by the Emporer's spokeman.

The American carriers lost an entire squadron of torpedo planes when they failed to link up with fighter escorts. The dive bombers had fighter escort even though they weren't engaged by enemy fighters. The War Dept. refused to answer when asked why the fighters were assigned to the wrong attack groups. The Hornet lost a large number of planes when they couldn't locate the enemy task force. Despite this cavalcade of errors, Admirals Fletcher and Spruance have not been removed.

Code Broken
The failure at Midway is even more disheartening because the U.S. Navy knew the Japanese were coming. Secret documents provided to the NY Times showed that "Magic" intercepts showed the Japanese planned to attack Midway, which they called "AF".

Obsolete Equipment
Some critics blamed the failure at Midway on the use of obsolete aircraft. The inappropriately named Devastator torpedo planes proved no match for the Japanese fighters. Even the Avengers, its schedule replacements, were riddled with bullets and rendered unflyable. Secretary of War Stimson dodged the question saying simply: "You go to war with the Navy you have, not the Navy you want or would like to have". Critics immediately called for his resignation.

> internal rod.
John,
I read your reviews and you are very well versed. I live only one
mile from the ocean in South Florida, and use an RF-2200, and I am
lucky to get NYC stations! How are you able to get BCB stations from
that distance? I saw your web page and see that you live inland
surrounded by mts/hills.

Provision is made on the back for the connection of a longwire
> antenna to a 500 Ohm post, also a ground/earth connector, but I have not
> tried this as reception on the internal ferrite rod is so good.
I have a DX-440 with an internal ferrite rod and still cannot pick up
stations at that distance. I am originally from Oklahoma, about 1,800
miles from here in South Florida, but no way can I get any station,
even the 50KW station on 1520, KOMA!

> FM band. The most powerful FM receiver I have owned is my Drake SW8, but the

Had you prefered U.S.Army had never done anything about the Mississippi River? Is that what you think? Do you approve of Cities and Towns all along the Mississippi River,North and South,being flooded all the time? Do you know what has been installed along the Mississippi River banks many years ago? I know.Do you?

"not to mention that he
shill bids on his gear using the above mentioned gottahaveit1995 name"

How do you know this when he makes his auctions private ? Except for X
material, why would one want a private auction ?

I will agree that he describes the gear much more glowingly than I. He has
re-sold 3 of my radios. One went out on a Monday and it was listed Sunday.

Hi Brian,

Thanks for giving me a little prodding.

I am still confused as to the correct wiring:I have the orginal manuals
along with a service bulletin that is dated 1/15/1990.

They ALL list ground as pin-17 [M7000 J2] not pin-12 as some have
mentioned; in fact pin-12 on the schematic is NU (not used).

If I only use the serial 9-pin connector from my laptop, the wiring is:

PC M7000 J2
recive data 2 5
Xmtr Data 3 4
DTR 4 6
Signal GND 5 17
DSR 6
RTS 7
CTS 8

NOTE: tie 7 to 8
tie 6 to 4
ALL at the PC 9-pin connector

Now Software:

WIN98 OS running Hyperterm pgm
baud - 2400
bits 8
stop 2
pol --
handshake hardware
modem KTerm

The program gets stuck when I start to receive (ask for a file)

If I use the above except M7Kterm

I install the pgm in a new folder

F10 to set new parameters (responds slow after key stroke?)
F1 start nothing on screen
L opens log file, however after I close it and open the log file; the
file is emply!!!

Have tried two seperate laptops with same results!!!

Do I have to be careful with the setting in the M-7000 menu?

If you have the time this might be handled better offline (landline or
E-Mail). I live in the Boston area.

Then I could post the final results to the group.

Best Regards,

// John

Here is a question for those fine folks on this newsgroup that have placed posts here in the past saying "the economy is in great shape!"

Well, today the U.S. Government Census Bureau published the following information:

"Over the last -FIVE- years (2000-2005) the 'Median Household Income' has -DECREASED- in 47 of the 50 states".

Gee, that doesn't sound like a good economy to me, but maybe you rocket scientists have a good explanation????

Heckuva job, Georgie ("Outsourcing is good for this country").

P.S.

Wake up, sheeple! This country is getting fucked, but good.

Bwaaahaaaahaaaa

3889. Need advice for Transamerica homebrew loop

Newsgroup: rec.radio.shortwave
Date: 2006-08-31 01:02:38 UTC
From: N9NEO <yzordderrex@verizon.net>
Message-ID: <1156986158.148145.168990@h48g2000cwc.googlegroups.com>
Source record: 90049

I am gathering parts for a large loop for MW & 75m AM window. I'll be taking the loop across America at the end of September. I hope to fatten up my MW & 75m logbooks. I hope to get up early every morning and do about 5-6 hours driving a day. Camping out at night with my Loop. I wish I could take my dog, but I'm flying back and I can't risk problems a dog might cause on that type of a trip.

Loop has to be sturdy and fit in a 4'x4' space in my pickup. I'll cobble up a case for it so it don't get smashed. So loop is going to be near 4' on each side and I suppose enough turns to resonate a 450pf air variable. The variable has two 20pf-450pf sections. I'm told this variable came out of a Heath SB220 linear. I suppose I could wire the sections in series for 10pf to 225pf.

So there is one question. How do I want to wire this thing up? More inductance and less capacitance? I'm afraid I might have problems tuning this thing if I wire them in parallel and i have a lot of Q. I might turn the shaft a microdegree and have the peak blow right by the station I'm going to tune.

Now I think I can just stick the radio Degen DE-1103 portable near the loop and do ok. I shouldn't have to hardwire the thing into the radio, right? Not sure how to couple in 75m. Now how critical is the loading on the loop? Can I wind one turn and find a sweetspot in the way of coupling for best signal? I understand the loading -vs- Q issues with coupling.

Now does the secondary suffer from some kind of balancing issues? In other words if I send the one turn secondary into a single ended preamp will that be a problem? Should I do a double ended preamp with a pair of Jfets? 3904s?

Does this thing need to tilt, or is just spin around enough?

Ok, I think that about covers it for now. I am leaving in a month, so I don't have a lot of time for research and experimentation. I know there are those here who know loops - I have read your posts.

I have eight antennas combined in 7 ANC-4's.

If you use the two serious antenna approach, you simply steer a null onto the noise source. Unless the desired signal is in the same direction, it's not cancelled.

Depending on the separation and orientation of the array, it may even be enhanced (in a peak of the pattern of the phased pair) while the noise is eliminated (in a null of the pattern of the phased pair).

Generally a quarter wave of separation is good, giving you a peak at one endfire while you have a null at the other endfire. In general the null will be a V pattern that you sweep from one endfire, opening up at broadside to a line, and closing at the other endfire, as you tune the phasing and gain.

And more generally than noise sources, you can cancel out a local broadcaster and listen to what's under it, by steering your null onto him, though it can be a tricky adjustment, since you need an insanely deep null, so you're dealing in fractions of a degree.

You should point out your antennas are active verticals of the Dymek
DA-100E type. It's not possible to steer an array of random wires
with any precision.

What is the Part 15 advisory?

And why would the sig gen work without an antenna attached one time but
not all the others if both were in the same room in the same settings?

Are you implying the scanner broke up the signal and captured it on
dozens of frequencies, or was the signal that got sent out somehow
broken up between antennas?

Please be more specific. Thanks.

Can't say about the one time/not thing.. but signal generators are not
clean. They generate tons of spurs and harmonics (especially in the bands
above about 50MHz where they USE those harmonics to get higher frequencies).
Add to this that the scanner is very sensitive, and also generates internal
spurs (birdies) of it's own, and you can get some really interesting
'phantom' reception points. If you shorten the antenna on the generator, or
turn down the RF level, some of these phantoms will disappear. As would some
of them if you were using an outdoor antenna for the scanner.

3903. Lowe HF-150 Backlighting

Newsgroup: rec.radio.shortwave
Date: 2006-08-31 02:54:11 UTC
From: Dale Parfitt <par@parelectronics.com>
Message-ID: <nbsJg.9123$4O4.5669@trnddc02>
Source record: 90063

I thought I would repost this answer to a query on Racal backlighting for those that might be interested in adding backlight to their HF-150. I have no interest in doing the work, but creative individuals should be able to duplicate my results:

While I have never done a backlight for the Racal, I have done numerous Lowe HF-150. There, the procedure involves removing the foil backing from the display while being careful not to remove the polarizing film that lies directly beneath the foil.
Next a plexiglass sheet the size of the area to be illuminated is uniformly sanded on one side with very fine grit paper- the idea is to frost the surface allowing light to escape from this front surface. A pair of slots are milled into each end of the sheet that will allow a T1 3/4 LED to press axially
into the sheet. (each LED will be "looking" towards the middle of the sheet). Finally
an Avery self adhering white label is adhered to the back side of the plexi sheet. I also polish all edges so that light will only escape out the frosted front. The sheet is finally sandwiched between the back of the display and its socket.
Here is a Lowe HF-150 after backlighting:

Yes, the antennas will not be very effective 3 to 30 MHz and will work
much better in the 1 to 5 GHz range to which they are tuned.

The detector in most portable radios requires a carrier to demodulate the audio. AM is amplitude modulation that has this carrier along with the audio side bands (both upper and lower). SSB (usually just one side band) generally does not have a carrier so the radio needs a replacement for the missing carrier and that is the BFO, which is a local oscillator that you tune that "beats" or mixes with the incoming side band signal allowing it to be detected. Tuning this BFO is not a fine tuning operation but adjusting the local oscillator to what the carrier would be if it was present.

The wide and narrow filter selection usually has to do with whether the signal you want to hear is far from other strong signals. The wider filter will allow a wider and higher range of audio frequencies to be heard in AM mode. Use the narrow filter when a near by channel is causing interference in AM mode. SSB uses a narrower range of audio frequencies so the wider filter will not make the signal sound better and just allow more noise into the audio making it harder to hear what is being said. So in AM mode you normally use the wide filter and in SSB mode you usually use the narrow filter. This wide / narrow filter selection is the final gate of a range of frequencies that get passed on to the audio stage in the radio. Tuning moves this range of a few kilohertz through the range of 500 KHz to 30,000 KHz on most radios.

Short wave covers 2,300 to 30,000 KHz and consists of many band segments. There are 14 international broadcast bands that are with few exceptions AM modulated just like the regular AMBCB band you know about. There are a number of ham bands and they have digital, CW and SSB modes of transmission. There are bands for utilities, air craft, marine and military. If it is a person to person voice communication then it is usually SSB mode and if it is an international broadcast then it is usually AM mode.

Perhaps if RS didn't sell so much redundant Sprint Telephones, overpriced
DVD players and TV's and their UTTERLY USELESS junk toys that
start to appear each Labor Day and multiply right up till Xmas, their sales
would rise. Personally however I would not miss them if each and every
RS were to close and the company was to go the way of FW Woolworth.
Most of the stuff you can get at RS you can usually get at Walmart for
50% less price anyway, plus Walmart employees are usually a tad more
intellegent than your average Radio Shack stooge.

They are too dumb and blind to see to obvious facts of how the economy is not based on savings and investment but rather increasingly on a debt and interest cycle. Of course, these are the same people who are 10 and 20 thousand in the hole on credit cards buying overpriced crap they couldn't afford in the first place.

Interesting how a fucking moron like that criticizes my comments about the lack of saving and investment and somehow associates it with communism. He's just further proof of how shitty the public school system really is in this country. Of course, they don't teach much in the way of critical thinking skills but rather what some of bullshit they can cram down the throats of impressionable youngsters.

Not to mention if I was a communist, then wouldn't I be against the private ownership of business. Or does the dolt who posted the above criticism of me ever actually read what communism is all about.

Maybe at *your* Wal*Mart. It's hard to tell at any of the ones near me
because nobody speaks English!

Pretty spineless. You'd think they could've sat down with each employee
for a couple months, but the article says employees were notified ahead
of time that terminations would be coming electronically...still,
doesn't exactly make me want to go shop there anymore than I already
did (which is hardly ever anyway).

If this is true, it isn't so surprising - a few stores have closed locally. Many are not as busy as they once were and I suspect "might" be going the same way in the near future. "SOME" things are still able to be gotten there that Wal-Mart doesn't supply - BUT - then again - those are the things which "experimenters", "builders", "technicians", "radio enthusiasts" would buy. ALL ELSE - is "Wal-Mart" related type items. Heck - even "Wal-Mart" sells phone plans now for at least a couple companies but they don't hound you when walking in the door to buy one. "IF" Wal-Mart sold "ALL" items that RS handled and "Cheaper" - yeah, I think RS would go DOWN.

Lets not give Wal-Mart TOO much credit here - I hear they're not doing so well all the sudden - either. The local store - ranked one of the top sellers in the nation - parking lot and aisles always full of shoppers, bringing in "millions" a day (data acquired from a good source) - is laying off people, cutting back hours, freezing pay raises, etc. AND I hear that is a trend across the nation in "Wal-Mart". So - even that giant may be coming to it's knees. My question on this issue, is I wonder if it has anything even remotely related to do with the "mexican" hiring policies they were busted on? A retaliation of having to pay "higher" wages to Americans - or shall we say "Legal" residents? They closed a store down in Canada when the people there wanted to form a "union" - so I heard in a news column. Sure makes you wonder. Its amazing what the holder of the wallet can do!

It is interesting (in a sad way) to see these big companies going belly up or at least having woes..... It makes you wonder where we are actually headed. HERE - Wal-Marts ARE one of the biggest employers. If they go out - the unemployment rate will be higher than George Bush Jr. can count. Almost as high as his deficit.
I know Wal-Marts and yes some others too - already gone by the way side - have been accused of killing off the Mom and Pop stores, but the whole picture just plain SUCKS.

I guess the adage applies - it IS a "Dog eat dog" world out there.

There are seven or eight Wal Mart Supercenter stores here in the Jackson area.(Look them up if y'all dont believe me) The closest one to me (where I do my food shopping and whatever else I throw in my shopping cart) is one and a half miles South of doggy's couch.

But,yesteryday afterynoon I went to the Wal Mart Supercenter store in Clinton,Mississippi (five miles due West of doggy's couch) because the Tobacco Market discount tobacco (I spent over forty dollars for four cardboard cans of cigarette tobacco) store is over there and then I stopped off at that Wal Mart Supercenter store over there.

As I was loading my groceries in the back of my van,,,,,, ooooooo la la,did I ever see the cutest cutie pie college gal loading her purchases in her car.WOW! made me feel like I was sixteen years old again.Mississippi College is a half mile from that store.I would say most of the Wal Mart employees around here have a fair amount of intelligence,and they speak the English language too.

The Sinister Network That Controls the Democrats: The Shadow Party

"American supremacy is the greatest threat to the world today."
George Soros, MoveOn.org's billionaire benefactor

"Now it's our party! We bought it, we own it!"
MoveOn.org leader referring to the Democratic Party.

Radical leftist Eli Pariser -- one of the organizers and leaders of MoveOn.org -- made the above statement following the 2004 elections. How could Pariser make such a statement?

Simple. A cadre of leftist billionaires -- chief among them, megalomaniac George Soros -- contributed more than $300 million to liberal candidates and groups in 2004. Thus, as far as Pariser and his masters are concerned, what was once a great party of ideas and leadership sold itself to them in 2004.

A small but enormously powerful group of radical forces are undermining America's unity! And unless we get the word out far and wide, they'll fulfill their plan and come power in 2008.

Why? Because right now, as it did 40 years ago, the radical left in America has in motion a plan to cost the United States a victory in war and topple a President in the process.

Who's behind this threat to our security and to America's two party system?

The answers go to the heart of journalist Richard Poe's and my book, The Shadow Party. In it we detail the movers, financiers and radicals who stay just out of sight as they pull the strings that control Hillary, Dean, John Kerry, Al Gore and the rest.

Opening the door to information about this threat to our political system. As we argue and support with fact, by reading The Shadow Party you'll discover...

* Plans to rewrite large parts of our Constitution.

* Hillary's simply posturing as a "moderate" until she's elected President and that leftist groups within the Shadow Party are "attacking" her as part of a plan to make her look credible in the eyes of the American people.

* The Shadow Party operates through a vast assortment of private think tanks, unions, stealth PACs, foundations, 527s and other front groups to accomplish its long-term goals!

"The Shadow Party" exposes not just those involved in the takeover of Democratic Party, but exposes, as well, the growing web of radical leftists in America whose shared agenda is to undermine our unity and, in essence, pass along victory to our enemies across the globe.

Please understand that what's at stake is the viability of our two-party system. Through subversion, the Shadow Party has co-opted a one of the nation's two political parties. In turn, instead of a loyal opposition, the Democratic Party is more like a caged, dangerous animal ready to unleash and burn down all who oppose it.

The defeat of Connecticut Senator Joe Lieberman was nothing less than another nail in the coffin of a thoughtful, respected Party. Today, ordinary Democrats have been disenfranchised.

Lieberman voted with the Democrats better than 90% of the time. But that wasn't enough for the radicals who control the Democratic Party today. It's all or nothing. In this particular case, Lieberman wanted to fight Islamic fascism head-on.

But Lieberman's worldview conflicts with the Shadow Party's leaders, most notably Soros. Soros, who is rabidly anti-American, has stated time and again, "American supremacy is the greatest threat to the world today." He hates George W. Bush and claims that terrorism is a result of Bush and America's policies. [LOL - sure it is.]

Of course, that's absurd. But, as I said, Soros, like his Shadow Party cronies, is a megalomaniac and power is all they're truly after!

No, if one antenna isn't hearing the signal you want to eliminate, the
job is done for you. If it is hearing it, you phase it away with the
other antenna.

Nothing in the operation changes. You diddle the knobs the same way
in either case, and respond the same way.

The ANC-4 doesn't care where the signal comes from, just that it's
present.

Only when not congregating amongst themselves.

'The "hyphenated-Americanism" Teddy Roosevelt and Woodrow Wilson decried is
today celebrated. On California's campuses there are separate dorms,
fraternities, sororities, student centers and graduations for Asian,
Hispanic and black students. The tens of millions coming endlessly from
countries, cultures and civilizations whose peoples have never before been
assimilated into a First World nation may spell the end of America as one
nation and one people by mid-century.'

3961. Re: Who's been running the show since the Katrina disaster?

Newsgroup: rec.radio.shortwave
Date: 2006-08-31 15:43:01 UTC
From: SeeingEyeDog <star@shot.org>
Message-ID: <12fe0rsm6tqgg74@corp.supernews.com>
Source record: 90120

For a long time now we've been listening to the Democrats and their toadies in the media complaining about the Bush administration's handling of the Hurricane Katrina disaster and its aftermath.

They charge it up to what they call the administration's incompetence, implying that had the Democrats been running the show, things would have been handled much better.

It takes a lot of gall to make that charge because as one Town Hall blogger, Cato's Corner, recently pointed out, the Democrats were in charge before, during and ever since Katrina hit the Gulf Coast.

In the United States, the authorities at the state and local levels are responsible for what happens in their areas. In Louisiana the governor is a Democrat, and the mayor of New Orleans is a Democrat. They were the so-called first responders, and their response was pitiful. They can blame President Bush all they want, but it was their job to handle the disaster and their handling of it was a disaster in itself.

That incompetence continues, especially in New Orleans where the cleanup and rebuilding efforts are lagging far behind where they would have been had they done their jobs competently. And they can't blame that on the president or the federal government.

The fact is that $11.8 billion has been allocated. That's everything that New Orleans asked for. They got $6 billion in December, another $4 billion in May, another $1.8 billion recently, and yet they haven't spent the money.

One big problem: New Orleans has yet to come up with a master plan that will allow people to know what they can do and how to do it.

"The citizens of New Orleans need to know what the plans are, so the citizens can make their plans on whether they should rebuild, repair or sell their homes," Norman Francis, chairman of the Louisiana Recovery Authority, which oversees federal aid given to Louisiana told the Seattle Post-Intelligencer.

"A lot of people are holding their money back pending an affirmation that the city really has a broader idea of where it's going in the future. What kind of a city is it going to be?" added Ken Topping, a California planning consultant hired to help.

Moreover, the city refuses to relax the red-tape provisions to allow the people to get the money to be able to rebuild, which is exactly the opposite of what Mississippi's Republican Governor Haley Barbour has done in his state. He cut through the red tape to allow the people to get the funds necessary to go ahead and rebuild.

Another reason is that the folks in Mississippi are working together, not standing around waiting for the federal government to rebuild. Officials in Louisiana are still whining, waiting for somebody to do everything for them.

The federal government has supplied the funds. It is the local government that refuses to distribute the money. I was talking to a member of Congress from Louisiana who recalled that the Congress had authorized $6 billion last December but New Orleans made the determination that they were not going to spend any of it until they got the whole $10 billion they were then demanding.

In Mississippi, on the other hand, as they were getting the money they were finding ways to spend it to help the people rebuild.

Tragically, the President is playing into the hands of his critics by implying that he is somehow to blame for the situation. He's allowing the Democrats to use him as fodder in their attacks on him. He needs to stand up and shout, "We're not to blame. We gave you the money. If the people in New Orleans don't have the money it's not because the federal government hasn't done its job; it's because your local government officials refuse to do theirs."

Wrong!

From Wikipedia, the free encyclopedia

Ray Nagin

Clarence Ray Nagin, Jr. (born June 11, 1956) is the mayor of New Orleans. He was first elected on March 2, 2002, to succeed his fellow Democrat, Marc Morial. Nagin gained international attention in 2005 for his handling of Hurricane Katrina, which devastated the New Orleans area. He was reelected to a second term on May 20, 2006. Nagin was a registered Republican his entire life, prior to seeking office. He officially switched parties to win in a heavily Democratic area.

Yep, a noise bridge can be quite handy for setting up an antenna tuner.

I went to the link from a system where it is safe to do so (Mozilla
running on OpenVMS). Since the system can't run the file, it
downloads it as binary. I normally would expect an *.ASP file to
be a link to on-line video or something, but this wasn't.

It starts off as <SCRIPT language=vbscript>, but the rest is
unintellible. It ends with some sort of UnEncode function that
apparently goes through the contents and unpacks it in some way,
creating a document.

Some brave person with a disposable system might want to run it
to unpack it to see what it really is: but unless you know how
to take proper precautions, I second the previous comments not
to follow the link.

Bart.

I suspect that it's in some extended character
set, probably Chinese given the probable location of the web
site.

I was reacting to the clunky lamp.

The tin foil is a breeze to remove- couple of minutes tops. Residual
adhesive comes off with turp.

Lowe used to make a backlight kit- had a couple of them (also required
removing the reflective foil), but they were non-uniform in lighting and
unless you modified the circuit, it would not work under battery power- back
before NimH w/ their hi current.
Obviously, the first conversion is the hardest- after that it's a 20 minute
procedure- including making the light dispersion plate.

I used an MFJ-202B and a Drake MN-75 tuner. If I were to go back to using a large dipole or inverted V that's probaby the combo I would again employ.

It was easy to set up the antenna for various bands and I simply marked the basic settings on a card which made it very handy to hop from band to band.

I ran it on one of my Macs (Tiger) and it opened a System Profile,
attempting to upload hardware and software configurations.

It wasn't successful at either the upload or the evaluation, but it
did access the profiling software without a hesitation.

Thanks for the info. Very interesting. I look forward to trying the ANC-4. I'm going to try it with a variety of short wires, but I will probably also try to use it in conjunction with a good quality active whip (H-800 Skymatch). Should be fun figuring out what works best...I love doing this sort of thing.

Steve

About 5-7 miles or so NE of me. Considering all of the
local scrutiny about Fernald, I've never felt that I had
to worry about that sort of thing. Besides, there's been
a ton of residential development toward Fernald, and
considering the housing prices, they're the ones more
to worry.

Because before his auctions went "Private", you could see "gottahaveit1995 bidding on numerous things of his. Ebays use of "Private" auctions mystifies me, it only serves to protect questionable dealers, anyone else have more insight?

The purpose of Private auctions is just that - private. As in not public.

For example, where I work, we have a yearly "sell off some old computers to
the employees" thing. We have used eBay private auctions for this. Only
our employees can bid - not the general public.

In this case anybody can bid, (except those of us he has blocked!), but their *identities* are kept private. Therefore, no one can see who has bid, and most likely ol' Martyn can continue to bid using the "gottahaveit1995" ID and no one will know, because ya can't look and see.

Too bad things aren't as they are on Star Trek where money doesn't exist any more LOL. The capitalists would all have permanently brown stained underwear and pants - to match their nazi uniforms.

Is it a REGEN? Bulti band? AM - SW ?

I'd give my left n*t for the ALLIED RADIO KNIGHT KIT REGENERATIVE
RECEIVER I built in the fifties. The regen "howl" and "screech" drove my
mother nuts. Dad got me a Halli S-40B real quick. I wonder where the
knight regen ended up.

TenTec has sevral radio kits, including a regen at about HALF that price

> Very imprecise and technically minimalist.

Yes, but it's also correct. I have the MFJ equivalent, and the
contraption works just as Ron describes. I have two antennas up thar,
one a random wire and the other a multiband dipole, and except for the
lower HF bands, where the random wire just isn't quite long enough, I
can cancel out most any *single* obnoxious local noise. For the MW
station nulling, by and large it works fine, despite the mismatched
antenna length...it will chew a big bite out of a pretty big local
signal and leave the weaker station 'neath intact.

It doesn't work worth a hoot for general band noise (no surprise), and
for things like distant lightning that theoretically should be
nullable, it is so tricky that it isn't really worth the trouble.
